Self-organization in Biological Systems Scott Camazine,2003-09-17 Biological structures built through mechanisms involving self organization are examined in this text Examples of such structures are termite mounds which provide their inhabitants with a secure stable environment The text looks at why how self organization occurs in nature

Self-Organization in Biological Systems Scott Camazine,Jean-Louis Deneubourg,Nigel R. Franks,James Sneyd,Guy Theraulaz,Eric Bonabeau,2020-05-05 The synchronized flashing of fireflies at night The spiraling patterns of an aggregating slime mold The anastomosing network of army ant trails The coordinated movements of a school of fish Researchers are finding in such patterns phenomena that have fascinated naturalists for centuries a fertile new approach to understanding biological systems the study of self organization This book a primer on self organization in biological systems for students and other enthusiasts introduces readers to the basic concepts and tools for studying self organization and then examines numerous examples of self organization in the natural world Self organization refers to diverse pattern formation processes in the physical and biological world from sand grains assembling into rippled dunes to cells combining to create highly structured tissues to individual insects working to create sophisticated societies What these diverse systems hold in common is the proximate means by which they acquire order and structure In self organizing systems pattern at the global level emerges solely from interactions among lower level components Remarkably even very complex structures result from the iteration of surprisingly simple behaviors performed by individuals relying on only local information This striking conclusion suggests important lines of inquiry To what degree is environmental rather than individual complexity responsible for group complexity To what extent have widely differing organisms adopted similar convergent strategies of pattern formation How specifically has natural selection determined the rules governing interactions within biological systems Broad in scope thorough yet accessible this book is a self contained introduction to self organization and complexity in biology a field of study at the forefront of life sciences research

Complexity Perspectives on Language, Communication and Society Angels Massip-Bonet, Albert Bastardas-Boada, 2012-10-13 The language communication society triangle defies traditional scientific approaches Rather it is a phenomenon that calls for an integration of complex transdisciplinary perspectives if we are to make any progress in understanding how it works The highly diverse agents in play are not merely cognitive and or cultural but also emotional and behavioural in their specificity Indeed the effort may require building a theoretical and methodological body of knowledge that can effectively convey the characteristic properties of phenomena in human terms New complexity approaches allow us to rethink our limited and mechanistic images of human societies and create more appropriate emo cognitive dynamic and holistic models We have to enter into dialogue with the complexity views coming out of other more material sciences but we also need to take steps in the linguistic and psycho sociological fields towards creating perspectives and concepts better fitted to human characteristics Our understanding of complexity is different but not opposed to the one that is more commonly found in texts written by people working in physics or computer science for example The goal of this book is to extend the knowledge of these other more human or socially oriented perspectives on complexity taking account of the language and communication singularities of human agents in society Our understanding of complexity is different but not opposed to the one that is more commonly found in texts written by people working in physics or computer science for example The goal of this book is to extend the knowledge of these other more human or socially oriented perspectives on complexity taking account of the language and communication singularities of human agents in society

Challenges and Solutions of Oncological Hyperthermia Andras Szasz, 2020-04-02 The next generation of oncological hyperthermia involves the medical innovation of selectively heating up the malignant cells of the body in a controlled way The easily distinguishable biophysical and physiological characteristics of cancer cells and their immediate environment are the focus of the targeted energy delivery of this treatment This heterogenic heating concept breaks with the

homogeneous nature of conventional hyperthermia where an isothermally equal temperature is applied to the large surface area of a solid tumor Due to its selectivity the new concept enables the usage of a significantly lower energy making it safer less toxic and easier to use This book shows the challenges facing oncological hyperthermia and highlights clinical results obtained in various countries It also presents discussions about the theoretical basis of the method adding some technical discussions and clarifying the most difficult points of its design The contributions dealing with clinical results use state of art conventional therapies with complementary hyperthermia and show the advantages of such a combination

Organic Computing - Technical Systems for Survival in the Real World Christian Müller-Schloer, Sven Tomforde, 2017-12-28 This book is a comprehensive introduction into Organic Computing OC presenting systematically the current state of the art in OC It starts with motivating examples of self organising self adaptive and emergent systems derives their common characteristics and explains the fundamental ideas for a formal characterisation of such systems Special emphasis is given to a quantitative treatment of concepts like self organisation emergence autonomy robustness and adaptivity The book shows practical examples of architectures for OC systems and their applications in traffic control grid computing sensor networks robotics and smart camera systems The extension of single OC systems into collective systems consisting of social agents based on concepts like trust and reputation is explained OC makes heavy use of learning and optimisation technologies a compact overview of these technologies and related approaches to self organising systems is provided So far OC literature has been published with the researcher in mind Although the existing books have tried to follow a didactical concept they remain basically collections of scientific papers A comprehensive and systematic account of the OC ideas methods and achievements in the form of a textbook which lends itself to the newcomer in this field has been missing so far The targeted reader of this book is the master student in Computer Science Computer Engineering or Electrical Engineering or any other newcomer to the field of Organic Computing with some technical or Computer Science background Readers can seek access to OC ideas from different perspectives OC can be viewed 1 as a philosophy of adaptive and self organising life like technical systems 2 as an approach to a more quantitative and formal understanding of such systems and finally 3 a construction method for the practitioner who wants to build such systems In this book we first try to convey to the reader a feeling of the special character of natural and technical self organising and adaptive systems through a large number of illustrative examples Then we discuss quantitative aspects of such forms of organisation and finally we turn to methods of how to build such systems for practical applications

The Superorganism Bert Holldobler, Edward O Wilson, 2009 The Pulitzer Prize winning authors of *The Ants* render the extraordinary lives of the social insects ants bees wasps and termites in this visually spectacular volume 110 color and 100 black and white illustrations American Book Publishing Record , 2001 Managing Forests as Complex Adaptive Systems Christian C. Messier, Klaus J. Puettmann, K. David Coates, K. Dave Coates, 2013 This book links the emerging concepts of complexity complex adaptive system CAS and resilience to forest ecology and management It explores

how these concepts can be applied in various forest biomes of the world with their different ecological economic and social settings and history Individual chapters stress different elements of these concepts based on the specific setting and expertise of the authors Regions and authors have been selected to cover a diversity of viewpoints and emphases from silviculture and natural forests to forest restoration and from boreal to tropical forests The chapters show that there is no single generally applicable approach to forest management that applies to all settings The first set of chapters provides a global overview of how complexity CAS and resilience theory can benefit researchers who study forest ecosystems A second set of chapters provides guidance for managers in understanding how these concepts can help them to facilitate forest ecosystem change and renewal adapt or self organize in the face of global change while still delivering the goods and services desired by humans The book takes a broad approach by covering a variety of forest biomes and the full range of management goals from timber production to forest restoration to promote the maintenance of biodiversity quality of water or carbon storage

The Consultation in Phytotherapy E-Book Peter Conway, 2010-09-20 The Consultation in Phytotherapy considers the means by which the herbal practitioner can seek to appreciate the patient's predicament Written for both herbal medicine students and practitioners the book takes a radical approach challenging readers to reflect on the nature scope and methods of the consultation in herbal practice The author asserts that the effective consultation represents a therapeutic act in and of itself and proposes strategies for maximising and realising this therapeutic potential The book provides both a complement to and a critique of mainstream texts on clinical diagnosis and case management It contrasts the herbal consultation with that occurring in conventional medicine and offers rationales arguments and tools aimed at developing an enhanced capacity to achieve profound results in the herbal clinical encounter About the Author Peter Conway is a practising medical herbalist and has been involved in developing and teaching on several BSc and MSc courses in herbal medicine He is the President of the College of Practitioners of Phytotherapy and a Director of the European Herbal and Traditional medicine Practitioners Association Peter helped draft the National Professional Standards for Herbal Medicine and sat on the Department of Health Steering Group on the Statutory Regulation of Acupuncture and Herbal Medicine Key features Provides a context for understanding and appreciating what is meant by phytotherapy Explores the notion of the therapeutic relationship in herbal

practice and how this can practically be facilitated Considers all aspects pertaining to the aims and structure of the herbal consultation including history taking physical examination investigation concluding the consultation and providing ongoing care Examines and integrates a broad range of perspectives including those connected with placebo and the meaning response complexity and chaos theories psychoneuroimmunology evidence and narrative based medicine and phenomenological and traditional medicine approaches **Die Einheit des Individuums** Friedemann

Buddensiek,2012-02-13 Einzelne Lebewesen fassen wir als Individuen auf die aber die Zeit hin Einheit besitzen und sich verändern können Doch wie können sie Einheit besitzen wenn sie sich verändern Diese seit der Antike diskutierte ontologische Frage beantwortet Friedemann Buddensiek mit der These Individuen sind Funktionsgefüge Teil eines solchen gegebenenfalls veränderlichen Gefüges ist was das Gefüge bildet und was durch Interaktion und Kooperation mit anderen Teilen zu dessen Selbständigkeit beiträgt In der Kohärenz des Gefüges besteht die Einheit des Individuums Die systematisch ausgerichtete Studie zeichnet sich durch ihre methodologische und empirische Absicherung ebenso aus wie durch die Zusammenführung von Diskussionen etwa zur Spezies zur Vagheit zur Reduktion zur Emergenz und zur Funktion *Efficiency in Complex*

Systems Georgi Yordanov Georgiev,Mahmoud Shokrollahi-Far,2022-02-24 This book uses new ideas and language for understanding how self organization and complexity trend toward increased efficiency Different measures for efficiency from multiple disciplines are used to probe the ones that provide the most insight One major goal is to seek a common framework to trace the increase of efficiency as a measure of the level of organization and evolutionary stage of a complex system The chapters come from a satellite meeting hosted at the Conference on Complex Systems in Cancun 2017 The contributions will be peer reviewed and contributors from outside the conference will be invited to submit chapters to ensure full coverage of the topics This text will appeal to students and researchers working on complex systems and efficiency Homo Ecophagus

Warren M. Hern,2022-09-30 Home Ecophagus by Warren M Hern is a wide ranging look at the major problems for the survival of not just the human species but all other species on Earth due to human activities over the past tens of thousands years The title of the book indicates Hern's new name for the human species The man who devours the ecosystem Over the course of its evolution Hern observes humans have evolved cultures and adaptations that have now become malignant and that the human species at the global level has all the major characteristics of a malignant neoplasm converting all plant animal organic and inorganic material into human biomass or its adaptive adjuncts and support systems Hern contends that this process is incompatible with continued survival of the human species and most other species on the planet offering a diagnosis and prognosis of the current environmental impasse *The Ethics of Protocells* Mark A. Bedau,Emily C.

Parke,2009-04-17 Experts explore the potential benefits risks and moral aspects of protocell technology which creates simple forms of life from nonliving material Teams of scientists around the world are racing to create protocells microscopic self organizing entities that spontaneously assemble from simple organic and inorganic materials The creation of fully

autonomous protocells a technology that can for all intents and purposes be considered literally alive is only a matter of time This book examines the pressing social and ethical issues raised by the creation of life in the laboratory Protocells might offer great medical and social benefits and vast new economic opportunities but they also pose potential risks and threaten cultural and moral norms against tampering with nature and playing God The Ethics of Protocells offers a variety of perspectives on these concerns After a brief survey of current protocell research including the much publicized top down strategy of J Craig Venter and Hamilton Smith for which they have received multimillion dollar financing from the U S Department of Energy the chapters treat risk uncertainty and precaution lessons from recent history and related technologies and ethics in a future society with protocells The discussions range from new considerations of the precautionary principle and the role of professional ethicists to explorations of what can be learned from society s experience with other biotechnologies and the open source software movement Contributors Mark A Bedau Gaymon Bennett Giovanni Boniolo Carl Cranor Bill Durodi Mickey Gjerris Brigitte Hantsche Tangen Christine Hauskeller Andrew Hessel Brian Johnson George Khushf Emily C Parke Alain Pottage Paul Rabinow Per Sandin Joachim Schummer Mark Triant Laurie Zoloth

Nature Sir Norman Lockyer, 1869 *Toward a Living Architecture?* Christina Cogdell, 2019-01-01 A bold and unprecedented look at a cutting edge movement in architecture *Toward a Living Architecture* is the first book length critique of the emerging field of generative architecture and its nexus with computation biology and complexity Starting from the assertion that we should take generative architects rhetoric of biology and sustainability seriously Christina Cogdell examines their claims from the standpoints of the sciences they draw on complex systems theory evolutionary theory genetics and epigenetics and synthetic biology She reveals significant disconnects while also pointing to approaches and projects with significant potential for further development Arguing that architectural design today often only masquerades as sustainable Cogdell demonstrates how the language of some cutting edge practitioners and educators can mislead students and clients into thinking they are getting something biological when they are not In a narrative that moves from the computational toward the biological and from current practice to visionary futures Cogdell uses life cycle analysis as a baseline for parsing the material energetic and pollution differences between different digital and biological design and construction approaches Contrary to green tech sustainability advocates she questions whether quartzite based silicon technologies and their reliance on rare earth metals as currently designed are sustainable for much longer challenging common projections of a computationally designed and manufactured future Moreover in critiquing contemporary architecture and science from a historical vantage point she reveals the similarities between eugenic design of the 1930s and the aims of some generative architects and engineering synthetic biologists today Each chapter addresses a current architectural school or program while also exploring a distinct aspect of the corresponding scientific language theory or practice No other book critiques generative architecture by evaluating its scientific rhetoric and disjunction from actual

scientific theory and practice Based on the author s years of field research in architecture studios and biological labs this rare field building book does no less than definitively unsparingly explain the role of the natural sciences within contemporary architecture

Theories of Informetrics and Scholarly Communication Cassidy R. Sugimoto,2016-02-22

Scientometrics have become an essential element in the practice and evaluation of science and research including both the evaluation of individuals and national assessment exercises Yet researchers and practitioners in this field have lacked clear theories to guide their work As early as 1981 then doctoral student Blaise Cronin published The need for a theory of citing a call to arms for the fledgling scientometric community to produce foundational theories upon which the work of the field could be based More than three decades later the time has come to reach out the field again and ask how they have responded to this call This book compiles the foundational theories that guide informetrics and scholarly communication research It is a much needed compilation by leading scholars in the field that gathers together the theories that guide our understanding of authorship citing and impact

Unifying Systems Aarne Mämmelä,2025-04-29

Interdisciplinary systems thinking is complementary but does not replace conventional disciplinary analytical thinking The book is valuable for researchers their advisors and other thinkers interested in deep knowledge of science Interdisciplinary systems thinking is valuable for three reasons The goal of all science is a unified view of the world we cannot solve the significant problems of our time without interdisciplinary collaboration and general theories of systems and system archetypes support the solution to those problems System archetypes are generic system models that have stood the test of time As specialists within a discipline we must be able to communicate between disciplines Interdisciplinary generalists can offer us reliable visions and relevant research problems The goal of interdisciplinary research is to find unified solutions to those problems The book provides a lot of information from over a thousand sources in a structured manner to help the reader The book includes a comprehensive chronology vocabulary and bibliography The author has been a research professor in information engineering for over 25 years During his career he became interested in systems thinking which is closely related to the philosophy and history of science
