Semantic Web The Semantic Web Crafting Infrastructures For Agency:

The Semantic Web Bo Leuf, 2006-02-22 The Semantic Web is an idea of World Wide Web inventor Tim Berners Lee that the Web as a whole can be made more intelligent and perhaps even intuitive about how to serve a users needs Although search engines index much of the Web s content they have little ability to select the pages that a user really wants or needs Berners Lee foresees a number of ways in which developers and authors singly or in collaborations can use self descriptions and other techniques so that the context understanding programs can selectively find what users want The Semantic Web Crafting Infrastructure for Agency presents a more holistic view of the current state of development and deployment This a comprehensive reference to the rapidly developing technologies which are enabling more intelligent and automated transactions over the internet and a visionary overview of the implications of deploying such a layer of infrastructure A through examination of the Semantic Web including the following topics web information management languages and protocols application and tools and collaboration and agency A unique volume of practical information in depth analysis conceptual overviews and contextual material from professionals in the field Features appendices of technical terms and glossary Semantic Web resources intellectual property issues and lists of elements This is essential reading for engineers web developers and industry professionals wishing to enhance their knowledge of recent developments Management staff lecturers postgraduate and undergraduate students will also find this book appealing Service-Oriented Computing: Agents, Semantics, and Engineering Ryszard Kowalczyk, Quoc Bao Vo, Zakaria Maamar, Michael Huhns, 2009-12-11 This book constitutes the thoroughly refereed post conference proceedings of the International Workshop on Service Oriented Computing Agents Semantics and Engineering SOCASE 2009 held in Budapest Hungary as an associated event of AAMAS 2009 the main international conference on autonomous agents and multi agent systems The 10 revised full papers presented were carefully reviewed and selected for inclusion in the book The papers address a range of topics at the intersection of service oriented computing semantic technology and intelligent multiagent systems such as service description and discovery planning composition and negotiation semantic processes and service agents as well as applications *Next Generation Society Technological and Legal Issues* Alexander B. Sideridis, Charalampos Z. Patrikakis, 2010-01-26 Recent developments in information and communication technology ICT have paved the way for a world of advanced communication intelligent information processing and ubiquitous access to information and services The ability to work communicate interact conduct business and enjoy digital entertainment virtually anywhere is r idly becoming commonplace due to a multitude of small devices ranging from mobile phones and PDAs to RFID tags and wearable computers The increasing number of connected devices and the proliferation of networks provide no indication of a sl down in this tendency On the negative side misuse of this same technology entails serious risks in various aspects such as privacy violations advanced electronic crime cyber terrorism and even enlargement of the digital divide In extreme cases it may even threaten basic principles and human rights

The aforementioned issues raise an important question Is our society ready to adopt the technological advances in ubiquitous networking next generation Internet and pervasive computing To what extent will it manage to evolve promptly and efficiently to a next generation society adopting the forthcoming ICT challenges The Third International ICST Conference on e Democracy held in Athens Greece during September 23-25 2009 focused on the above issues Through a comprehensive list of thematic areas under the title Next Generation Society Technological and Legal issues the 2009 conference provided comprehensive reports and stimulated discussions on the technological ethical legal and political challenges ahead of us

Agreement Technologies Sascha Ossowski, 2012-12-20 More and more transactions whether in business or related to leisure activities are mediated automatically by computers and computer networks and this trend is having a significant impact on the conception and design of new computer applications The next generation of these applications will be based on software agents to which increasingly complex tasks can be delegated and which interact with each other in sophisticated ways so as to forge agreements in the interest of their human users The wide variety of technologies supporting this vision is the subject of this volume It summarises the European Cooperation in Science and Technology COST Action project on Agreement Technologies AT during which approximately 200 researchers from 25 European countries along with eight institutions from non COST countries cooperated as part of a number of working groups The book is the first to provide a comprehensive overview of the emerging field of Agreement Technologies written and coordinated by the leading researchers in the field The results set out here are due for wide dissemination beyond the computer technology sector involving law and social science as well

Innovations in

Multi-Agent Systems and Application - 1 Dipti Srinivasan,2010-07-17 In today's world the increasing requirement for emulating the behavior of real world applications for achieving effective management and control has necessitated the usage of advanced computational techniques Computational intelligence based techniques that combine a variety of problem solvers are becoming increasingly pervasive The ability of these methods to adapt to the dynamically changing environment and learn in an online manner has increased their usefulness in simulating intelligent behaviors as observed in humans These intelligent systems are able to handle the stochastic and uncertain nature of the real world problems Application domains requiring interaction of people or organizations with different even possibly conflicting goals and proprietary information handling are growing exponentially To efficiently handle these types of complex interactions distributed problem solving systems like multiagent systems have become a necessity The rapid advancements in network communication technologies have provided the platform for successful implementation of such intelligent agent based problem solvers An agent can be viewed as a self contained concurrently executing thread of control that encapsulates some state and communicates with its environment and possibly other agents via message passing Agent based systems offer advantages when independently developed components must interoperate in a heterogeneous environment Such agent based systems are increasingly being applied in a wide range of areas including telecommunications Business process modeling computer games distributed system control and robot systems
