Semantic Structure In The Finnish Lexicon:

Semantic Structure in the Finnish Lexicon Aili Flint,1980   Semantic Structure in the Finnish Lexicon Aili Flint,1979   **Morphological Structure, Lexical Representation and Lexical Access (RLE Linguistics C: Applied Linguistics)** Dominiek Sandra,Marcus Taft,2014-01-10 The main concern of this work is whether morphemes play a role in the lexical representation and processing of several types of polymorphemic words and more particularly at what precise representational and processing level The book comprises two theoretical contributions and a number of empirical ones One theoretical paper discusses several possible motivations for a morphologically organised mental lexicon like the economy of representation view and the efficiency of processing view and lays out the weaknesses that are associated with some of these motivations The other theoretical paper offers an interactive activation reinterpretation of the findings that were originally reported within the lexical search framework The empirical papers together cover a relatively broad array of language types and mainly deal with visual word recognition in normals in the context of lexical morphology derived and compound words Evidence is reported on the function of stems and affixes as processing units in prefixed and suffixed derivations The role of semantic transparency in the lexical representation of compounds is studied as is the effect of orthographic ambiguity on the parsing of novel compounds The inflection derivational distinction is approached in the context of Finnish a highly agglutinative language with much richer morphology than the languages usually studied in psycholinguistic experiments on polymorphemic words Two other contributions also approach the study object in the context of relatively uncharted domains one presents data on Chinese a language which uses a different script type logographic from the languages that are usually studied alphabetic script and another one presents data on language production   *Modals in the Languages of Europe* Björn Hansen,Ferdinand de Haan,2009-12-15 This book is the first comprehensive survey of modals and modal constructions in the languages of Europe It is a collaborative effort between scholars from Europe and the United States stemming from a workshop on Modals in the Languages of Europe in Valencia The aim of this book is to describe the properties of modals and modal constructions in the European area and to compare the systems in individual languages or language families from an areal and genetic perspective For the sake of contrast the book also looks at the expression of modality in some languages just outside of Europe The book consists of fourteen chapters on modal systems in individual languages or language families written by experts in the respective languages and an introductory and concluding chapter written by the editors The book gives both a description of the modals in the individual languages and an account of the nature and status of modals in general It provides the reader with a theoretical account of how modals and modal constructions are grammaticalized This theoretical account is informed by the parameters of grammaticalization of Christian Lehmann These parameters were chosen because they are language independent as opposed to more language specific criteria for instance the NICE criteria for English The parameters themselves are examined as well for their suitability as part of any theory of grammaticalization

The book thus gives readers access to a collection of data on modality that surpasses most works in this field and also provides a fresh perspective on issues of grammaticalization and language contact It is therefore of interest to scholars of modality language contact and areal linguistics grammaticalization theory and typology **The Fruits of Empirical Linguistics: Process** Sam Featherston,Susanne Winkler,2009 The architecture of the human language faculty has been one of the main foci of the linguistic research of the last half century This branch of linguistics broadly known as Generative Grammar is concerned with the formulation of explanatory formal accounts of linguistic phenomena with the ulterior goal of gaining insight into the properties of the language organ The series comprises high quality monographs and collected volumes that address such issues The topics in this series range from phonology to semantics from syntax to information structure from mathematical linguistics to studies of the lexicon **Conceptual Semantics** Urpo Nikanne,2018-09-03 In this book the micro modular approach known as Tiernet within Conceptual Semantics is introduced Constructions make up an important part in the approach but in this approach constructions are considered to be exceptions licensed links between micro modules one of the kinds of symbolic modules in the approach Similar to construction grammar approaches the micro modular approach takes a solid interest in the periphery and thus also studies irregular linking principles like constructions The book details particulars in the development of generative grammar and the relation of Conceptual Semantics to this development and then introduces the micro modular approach and shows its usefulness for the description of language generally by not only using examples from English but also and in particular by applying the micro modular approach of Conceptual Semantics to data from Finnish **Studies in Interactional Linguistics** Margret Selting,Elizabeth Couper-Kuhlen,2001-01-01 Current interactional linguistic research appears to be crystallizing around systematic themes which are all represented in this collection of papers In the first section where the relation between language and interaction is viewed from the perspective of language structure several articles deal with the potential of a single structure for both turn and sequence construction revealing a play off between planned and occasioned syntax with potentially far reaching consequences for language development Other articles deal with lexical expressions as resources for the conduct of interaction showing how they are heavily dependent on turn position and sequential context for their meaning potential In the second section with a view from the perspective of the interactional order a systematic focus of interest lies on three different conversational tasks projecting turn and turn unit completion starting up turns with non beginnings and self repairing The cross linguistic studies here all agree that common interactional tasks may well be carried out by quite different linguistic practices and that these practices are dependent to a certain extent on language features which are typologically distinct **Derivational Networks Across Languages** Lívia Körtvélyessy,Alexandra Bagasheva,Pavol Štekauer,2020-06-08 This pioneering research brings a new insight into derivational processes in terms of theory method and typology Theoretically it conceives of derivation as a three dimensional system Methodologically it introduces a range of

parameters for the evaluation of derivational networks including the derivational role combinability and blocking effects of semantic categories the maximum derivational potential and its actualization in relation to simple underived words and the maximum and average number of orders of derivation Each language specific chapter has a unified structure which made it possible to identify in the final typologically oriented chapter the systematicity and regularity in developing derivational networks in a sample of forty European languages and in a few language genera and families This is supported by considerations about the role of word classes morphological types and the differences and similarities between word formation processes of the languages belonging to the same genus family   *The Fate of Mood and Modality in Language Death* Petar Kehayov,2017-07-24 Research into the grammar of language death is often biased toward formal processes e g paradigmatic levelling In this study the author changes the perspective and shows that the relative susceptibility of linguistic elements to loss change and innovation in language death circumstances can be dependent on meaning and thus organized along semantic notions rather than along structure   **BIBLIOGRAPHIE linguistique de l'année 1982** H. Borkent,J.J. Beylsmit,Mark Janse,1985-03-31   **Process** Sam Featherston,Susanne Winkler,2009-06-02 The contributions to The Fruits of Empirical Linguistics Volume 1 Process reveal why the data driven approach makes for a research environment which is fast moving and democratic technological change has made the sources of linguistic data readily accessible These contributions show the methods both professional and student linguists are using to gather more evidence more easily than before   *The Uralic Languages* Daniel Abondolo,Riitta-Liisa Valijärvi,2023-03-31 The Uralic Languages second edition is a reference book which brings together detailed discussions of the historical development and specialized linguistic structures and features of the languages in the Uralic family The Uralic languages are spoken today in a vast geographical area stretching from Dalarna County in Sweden to Dudinka Taimyr Russia There are currently approximately 50 languages in the group the largest one among them being the state languages Finnish Estonian and Hungarian other Uralic languages covered in the book are South Saami Skolt Saami V ro Moksha Mordvin Mari Udmurt Zyrian Komi Mansi Khanty Nganasan Forest and Tundra Enets Nenets and Selkup The book also contains a chapter on Finnic languages the reconstruction of Uralic the history of Uralic studies connections of Uralic to other language families and language names demographics and degrees of endangerment This second and thoroughly revised edition updates and augments the authoritative accounts of the first edition and reflects recent and ongoing developments in linguistics and the languages themselves as well as our further enhanced understanding of the relations and patterns of influence between them Each chapter combines modern linguistic analysis and documentary linguistics a relatively uniform structure allows for easy typological comparison between the individual languages Written by an international team of experts The Uralic Languages will be invaluable to students and researchers within linguistics folklore and Siberian studies   Folia Slavica ,1982   *Translation Universals* Anna Mauranen,Pekka Kujamäki,2004 Translation universals is one of the most intriguing and controversial topics in recent

translation studies Can we discover general laws of translation independent of the particularities of individual translations Research into this is new serious empirical work only began in the late nineties The present volume offers the state of the art on the issue It includes theoretical discussion on alternative conceptualisations and new distinctions around the basic concepts Several papers test hypotheses on universals in the light of recent work in different languages and some suggest new ones emerging from empirical work over the last two to three years The book contributes to the search for generalities in translation the methodological solutions available and presents emerging evidence on the kinds of regularities that large scale research is bringing forth On a more practical level the applicability of the hypotheses and findings to translator education is as always a concern for translation studies **Universality of semantic frames and language specific Bulgarian data** Svetla Koeva,2025-06-20 The book Universality of semantic frames and language specific Bulgarian data is devoted to the principles of data organisation in the Bulgarian FrameNet which has been in development for more than 20 years and has gone through various phases Originally it was developed as an independent resource but for about fifteen years it has been correlated with the Berkeley FrameNet observing the following basic principles The information in the FrameNet that is relevant for the description of Bulgarian is considered language independent e g definition of frames and relations between them definitions of frames and elements and relations between them etc and is automatically transferred into a structure called a superframe For each superframe there may be one or more Bulgarian frames in which the language independent information is restructured if necessary so that it corresponds exactly to the description for the Bulgarian language The Bulgarian verbs of communication change movement contact and emotion are described in more detail their subclasses are delineated and the similarities and differences in the semantic and syntactic description for Bulgarian and English are compared and discussed It is shown how the semantic frames can be used in an experiment to assess children s mastery of semantic conceptualisation and syntactic use of verbs from their basic vocabulary These and a number of other applications automatic assignment of semantic roles automatic recognition of events in news automatic recognition of scenes in images and videos are some of the applications in which the Bulgarian FrameNet can be used In addition the semantic and syntactic information in the Bulgarian FrameNet can be used for theoretical considerations including comparative studies focussing on the modern state of the Bulgarian language and other languages for which a FrameNet has been developed **Finland, Sources of Information: 1978-1986** Kyllikki Ruokonen,1988 *Time in Languages, Languages in Time* Anna Čermáková,Thomas Egan,Hilde Hasselgård,Sylvi Rørvik,2021-09-17 This volume comprises a collection of contrastive studies on language and time Languages represented include Czech French German Mandarin Norwegian and Swedish all of which are contrasted with English While the amount of published research on temporal relations in general is considerable less work has been carried out on comparing how we talk about time in various languages and how languages change over time Several methodological challenges are addressed and solutions proposed such as how to deal with poor quality

historical data and how to identify n grams in typologically different languages for purposes of comparison The results of the various studies show how multilingual corpora can increase our knowledge of language specific features as well as linguistic typological and cultural differences and similarities across languages   The Semantic Salience Hierarchy Model Jingyu Zhang,2007 This empirical study examines the learning problem of the argument structure of psych predicates such as The dog frightens John and the related V ing adjectives such as The dog is frightening to John The problem is theoretically interesting because of the marked nature of the thematic role mapping of these sentences in relation to the principle of the Uniformity of Theta Assignment Hypothesis UTAH The problem is highly relevant to our understanding of second language acquisition as this is known to be a prevalent difficulty among language learners The author has framed the learning problem within a coherent parametric framework drawing on a sophisticated critical review of the syntax semantics literature and theories of L2 development The author has specifically developed a theory the Semantic Salience Hierarchy Model SSHM to explain the learning process The significance of the model is not confined only to this particular study as the issues related to the L2 acquisition of other causative verbs can also be examined within this model The findings of this study also bear implications to TESOL   The Semantic Web: Semantics and Big Data Philipp Cimiano,Oscar Corcho,Valentina Presutti,Laura Hollink,Sebastian Rudolph,2013-05-20 This book constitutes the refereed proceedings of the 10th Extended Semantic Web Conference ESWC 2013 held in Montpellier France in May 2013 The 42 revised full papers presented together with three invited talks were carefully reviewed and selected from 162 submissions They are organized in tracks on ontologies linked open data semantic data management mobile Web sensors and semantic streams reasoning natural language processing and information retrieval machine learning social Web and Web science cognition and semantic Web and in use and industrial tracks The book also includes 17 PhD papers presented at the PhD Symposium   **The Bilingual Mental Lexicon** Longxing Wei,2019-11-13 This book proposes the Bilingual Lemma Activation Model as a method for exploring the nature and activity of the bilingual mental lexicon in both speech production and language acquisition This model claims that the bilingual s two languages are not equally activated in code switching one playing a crucial role in grammatical frame building and the other being activated at a lexical level due to psycholinguistic reasons To test this model the book analyzes bilingual speech data from naturally occurring intrasentential code switching instances involving various language pairs A second claim of this model is that code switching naturally occurs because certain lemmas underlying some particular lexical items stored in the bilingual mental lexicon are language specific and such lemmas are in contact in bilingual speech To further test this model second language acquisition data are analyzed here to describe and explain sources of language transfer at the level of abstract lexical structure Thus from some psycholinguistic perspectives this model views bilingual speech involving code switching and interlanguage performance data as predictable outcomes of bilingual systems in contact This book will appeal to graduate students and researchers in both theoretical and applied
