Scientists, Democracy and Society Pierluigi Barrotta, 2018-03-21 This monograph examines the relationship between science and democracy The author argues that there is no clear cut division between science and the rest of society Rather scientists and laypeople form a single community of inquiry which aims at the truth To defend his theory the author shows that science and society are both heterogeneous and fragmented They display variable and shifting alliances between components He also explains how information flow between science and society is bi-directional through transactional processes In other words science and society mutually define themselves The author also explains how science is both objective and laden with values Coverage includes a wide range of topics such as the ideal of value free science the is ought divide thick terms and the language of science inductive risk the dichotomy between pure science and applied science constructivism and the philosophy of risk It also looks at the concepts of truth and objectivity the autonomy of science moral and social inquiry perfectionism and democracy and the role of experts in democratic societies The style is philosophical but the book features many examples and case studies It will appeal to philosophers of science those in science and technology studies as well as interested general readers

[Science, Technologies and Material Culture in the History of Education](#) Heather Ellis, 2020-05-18 Developed out of a 2015 conference of the History of Education Society UK this book explores the interconnections between the histories of science technologies and material culture and the history of

education The contributions express a shared concern over the extent to which the history of science and technology and the history of education are too frequently written about separately from each other despite being intimately connected This state of affairs they suggest is linked to broader divisions in the history of knowledge which has for many years been carved up into sections reflective of the academic subject divisions that structure modern universities and higher education in the West Most noticeably this has occurred with the history of science but more recently the history of humanities has been divided as well The contributions to this volume demonstrate the diversity and originality of research currently being conducted into the connections between the history of science and the history of education The importance of objects in teaching and their value as pedagogical tools emerges as a particularly significant area of research located at the intersection between the two fields of enquiry Indeed it is the materiality of education a focus on the use of objects pedagogical practices and particular spaces which seems to offer some of the most promising avenues for exploring further the relationship between the histories of science and education This book was originally published as a special issue of the History of Education

De Gruyter Handbook of Degrowth Lauren Eastwood, Kai Heron, 2024-03-04 Degrowth has emerged as one of the most exciting and contested fields of research into the drivers of global heating ecological collapse and economic injustice The perspective is both a critique of existing growth based models of development which it argues have put humanity on a collision course with non negotiable ecological limits and a vision for a brighter future in which humans and non humans alike can flourish By putting an end to growth seeking economic development and boundless energetic and material throughputs degrowth's proponents suggest we can build an economy that meets the material needs of people and planet for generations to come This handbook's contributions signal the importance of degrowth across multiple disciplines and practices Along the way they grapple with some of the most critical questions ideological assumptions policies and social struggles of our time The handbook approaches degrowth as a loosely knit and developing set of interdisciplinary propositions about what it might take to achieve a world of human and non human flourishing Contributors explore challenge and critique degrowth's propositions and its prospects of shaping scholarly agendas policy frameworks and social movements Essays consider degrowth from a variety of empirical and theoretical vantages including urban design architecture political economy political ecology critical geography and political theory This integrative approach at once critical and constructive aims to preserve for readers the sense of possibility that has drawn people to degrowth scholarship thus far

The Nature of Empire Andrea Duffy, 2025-09-15 The Nature of Empire exposes the central role of modern imperialism in the development of contemporary environmentalism and environmental science It builds this case through an investigation of five major modern empires Britain France Russia the Ottoman Empire and Japan This book offers readers a global environmental history of modern imperialism that actively engages Western based and non Western based empires As this study shows imperialism ultimately transformed human perceptions of nature and the environment in

significant lasting and conflicting ways It both inspired modern conservationist practices and fueled opposition to environmental policies in colonial contexts It also spurred the development of climate science which helped reveal the environmental toll of imperial exploitation and drive efforts to fight it The environmental and political legacies of empire remain evident today through unmitigated anthropogenic climate change and the increasing incidence of extreme weather which tends to disproportionately impact marginalized peoples This book stands as a useful and accessible resource for students scholars and all those seeking to better understand environmental history imperial legacies and the roots of contemporary climate challenges
