Low Notes On A High Level:

Tasting Coffee Kenneth Liberman, 2022-06-01 At once ethnographic and phenomenological Tasting Coffee investigates the global chain of coffee production from seed to cup stopping at every stage along the way to describe the tasting practices of each stakeholder purveying coffee The ethnomethodological care of these descriptions derives from an attunement to just how these stakeholders discover and describe the flavors of coffee and how they convert subjective experience into objective knowledge The methods and protocols of sensory science are also examined and assessed in their lived details making this study also a contribution to the sociology of science Based upon a decade of research in fourteen countries author Kenneth Liberman provides a nonessentialist ontology of coffee its history and its production The world of coffee becomes a microcosm in which many realities of postmodern humanity are exposed and clarified with the thoughts of Edmund Husserl Alfred Schutz Martin Heidegger Hans Georg Gadamer Emmanuel Levinas Maurice Merleau Ponty Jacques Derrida Ludwig Wittgenstein Aron Gurwitsch and Harold Garfinkel even as these naturally occurring case studies provide fresh specifications for these thinkers ideas

Pauri, 2013-04-17 Observability and Scientific Realism It is commonly thought that the birth of modern natural science was made possible by an intellectual shift from a mainly abstract and speculative conception of the world to a carefully elaborated image based on observations There is some grain of truth in this claim but this grain depends very much on what one takes observation to be In the philosophy of science of our century observation has been practically equated with sense perception This is understandable if we think of the attitude of radical empiricism that inspired Ernst Mach and the philosophers of the Vienna Circle who powerfully influenced our century's philosophy of science However this was not the attitude of the founders of modern science Galileo for example expressed in a famous passage of the Assayer the conviction that perceptual features of the world are merely subjective and are produced in the anima by the motion and impacts of unobservable particles that are endowed uniquely with mathematically expressible properties and which are therefore the real features of the world Moreover on other occasions when defending the Copernican theory he explicitly remarked that in admitting that the Sun is static and the Earth turns on its own axis reason must do violence to the sense and that it is thanks to this violence that one can know the true constitution of the universe *Understanding Language* Roger

Fowler, 2022-02-23 It is widely recognized that language is humanity's most distinctive and valuable faculty In this work originally published in 1974 Roger Fowler explains the character and absorbing interest of language Designed as an introductory text for students and others concerned with human communication the book is clearly and concisely written yet it in no way oversimplifies its rich and complicated subject The opening chapters set the scene by a discussion of the power of language in the social and psychological life of a man while the main body of the book is an introduction to linguistics the science of language study Coverage is provided of the main topics in linguistic description semantics syntax phonetics as well as of the functions of language its status in society and its relation to the individual The reader is invited to participate in some advanced thinking within an up to date and consistent linguistic theory Particular attention is given to the individual as language learner since the process of language acquisition illuminates most clearly the naturalness and the complexity of language The author's arguments are illustrated with hundreds of examples from English and other languages Suggestions
