Constant Materials, 1998 Chemical-Mechanical Polishing of Low Dielectric Constant Polymers and Organosilicate Glasses Christopher Lyle Borst, William N. Gill, Ronald J. Gutmann, 2013-11-27 As semiconductor manufacturers implement copper conductors in advanced interconnect schemes research and development efforts shift toward the selection of an insulator that can take maximum advantage of the lower power and faster signal propagation allowed by copper interconnects One of the main challenges to integrating a low dielectric constant low kappa insulator as a replacement for silicon dioxide is the behavior of such materials during the chemical mechanical planarization CMP process used in Damascene patterning Low kappa dielectrics tend to be softer and less chemically reactive than silicon dioxide providing significant challenges to successful removal and planarization of such materials The focus of this book is to merge the complex CMP models and mechanisms that have evolved in the past decade with recent experimental results with copper and low kappa CMP to develop a comprehensive mechanism for low and high removal rate processes The result is a more in depth look into the fundamental reaction kinetics that alter selectively consume and ultimately planarize a multi material structure during Damascene patterning Handbook of Semiconductor Manufacturing Technology Yoshio Nishi, Robert Doering, 2000-08-09 The Handbook of Semiconductor Manufacturing Technology describes the individual processes and manufacturing control support and infrastructure technologies of silicon based integrated circuit manufacturing many of which are also applicable for building devices on other semiconductor substrates Discussing ion implantation rapid thermal processing photomask fabrication chip testing and plasma etching the editors explore current and anticipated equipment devices materials and practices of silicon based manufacturing The book includes a foreword by Jack S Kilby cowinner of the Nobel Prize in Physics 2000 for his part in the invention of the integrated circuit **Functional Condensation Polymers** Charles E. Carraher Jr., Graham G.
