*The Great Ordovician Biodiversification Event: Insights from the Tafilalt Biota, Morocco* A.W. Hunter,J.J. Álvaro,B.

Lefebvre, P. Van Roy, S. Zamora, 2022 Special Publication 485 About 40 million years after the Cambrian Explosion the Great Ordovician Biodiversification Event GOBE represents a second and dramatic burst in marine biodiversity with major changes in the structure of ecosystems and the progressive replacement of the distinctive Cambrian Evolutionary Fauna by the Paleozoic Evolutionary Fauna. However the GOBE is not a single worldwide short term event but rather the complex sum of successive diversifications occurring in distinct taxonomic groups, trophic guilds and regions. This book focuses on the Late Ordovician Tafilalt Biota, Anti Atlas Morocco, which provides a snapshot of the GOBE in high latitude regions of the Southern Hemisphere. A series of contributions explore different aspects of the Tafilalt Biota including its geological setting, the international fossil trade in this area and a series of detailed systematic contributions describing many new taxa of marine invertebrates. This volume represents a significant contribution to the understanding of the Tafilalt Biota and its significance to the GOBE.

**A Revised Correlation of the Cambrian Rocks in the British Isles** A. W. A. Rushton, 2011 This work reviews the correlation of the British and Irish Cambrian with the current though incomplete international standard for the Cambrian. Since the earlier edition of 1972 the basal and upper limits of the Cambrian system have been internationally agreed so this account excludes Tremadocian rocks but includes some that were formerly considered Neoproterozoic. Half of the series and stage subdivisions are internationally agreed but for the undefined divisions of the Cambrian the standard used here makes use of data from Avalonian successions. Since the first edition was published almost every aspect of the Cambrian in the British Isles has been subjected to new study. Here the plate tectonic make up of the British Isles is reviewed, new radiometric ages and isotopic studies are summarized and the biostratigraphy is enhanced by the study of acritarchs especially in the Irish successions.

**Geological Exploration in Murzuq Basin** D. Worsley, 2000-12-19 The Murzuq Basin is a large intracratonic sag basin located in southwestern Libya. Exploration efforts started in this vast and remote Saharan region already in 1957 and 60 exploratory wells have been drilled to date resulting in over 20 discoveries with around 4 000 million barrels of oil in place. Most discoveries have been made in Ordovician sandstone reservoirs sourced by hot shales of the Lower Silurian Tanazzuft Formation. Oil is already being produced and exported from the area but the basin's total hydrocarbon potential is still poorly understood. Recent exploration, especially the major discovery and initial development of the Giant Elephant Field, has greatly increased interest for the area's potential. Many petroleum geologists and companies now believe that the basin may well develop into a new major hydrocarbon province which will significantly contribute to Europe's energy needs in the next decades. This book presents papers from a conference held at Sebha University on the eastern margins of the Murzuq Basin in September 1998. The book continues an ongoing series of presentations of the geology of Libya but the 25 contributions herein mostly centre on the Murzuq Basin itself and on nearby areas. There are still many unresolved questions in terms of geological and hydrocarbon exploration in these difficult desert areas but the papers herein will hopefully present a first comprehensive overview of an exciting frontier exploration region. About half of the

papers are directly related to hydrocarbon exploration and to source rock and reservoir development but a wide variety of other features are also described ranging from palaeontology and biostratigraphy to ore geology and water resources covering the entire geological column from the Precambrian to the Holocene The book concludes with a bibliography covering all geological aspects of this challenging but very promising frontier area

**Outline of History** H. G. Wells, 1925 No book is provoking a more animated discussion among students of the social sciences at the present time than H G Wells Outline of History The author s task as he himself sets it is to tell truly

and clearly in one continuous narrative the whole story of life and mankind so far as it is known today But while these two volumes are plainly for the general reader rather than for the special student of history it does not follow that they contain nothing beyond an endless parade of names and dates Their chief value indeed is in the author's interpretation of what he writes about Events are appraised and men are weighed in the balance as he goes along Historians in general will not agree with some of these appraisals nor will they credit Mr Wells with an approach to infallibility in his judgment of the men who flit across his pages but his estimates of the relative value of facts and forces can scarcely be brushed aside because they do not command general indorsement On some matters unhappily Mr Wells has allowed his iconoclastic proclivities to run away with him Napoleon I for example cannot be disposed of as a second grade pestilence because he killed fewer people than the influenza epidemic of 1918 II p 384 nor will the world believe so long as it retains its senses that Napoleon III was a much more intelligent man than his uncle II p 438 Even the pinchbeck himself would have rebuked this insinuation But when all is said these two stout volumes embody a remarkable achievement They contain astonishingly few historical inaccuracies of the customary type The author's advisers and a competent galaxy of scholars they are have kept him clear of the pitfalls The style is terse and forceful Mr Wells certainly has the gift of cogent exposition
