Managing The Ocean Resources Research Law:

Managing the Ocean Resources of the United States Daniel P. Finn, 2012-12-06 Federal programs applicable to the oceans and coastal zone have evolved incrementally in response to perceived needs to expedite emerging maritime development while conserving valuable marine resources. As a result, the current federal marine effort is divided among a plethora of programs administered by a number of agencies within different Departments. The programs themselves are conducted under the authority of multiple statutes with varying reaches and objectives; as a result, they often overlap and conflict. There is no assurance, moreover, that the coverage of federal programs is complete in scope or comprehensive in conception. No single institutional device can ensure that these programs will manage the marine resources of the United States consistently and comprehensively so as to derive maximum public benefit. While the present maze of statutes, regulations, and executive directives may in theory provide opportunities for a wide-ranging consideration of all relevant factors prior to making specific decisions, there can be no guarantee that this objective is realized either systematically or reasonably effectively. Recent political developments indicate that the structure of federal marine programs will continue to be subject to scrutiny for some time. President Reagan's emphases on economic deregulation and development of outer continental shelf OCS oil and gas resources may lead to streamlining the OCS leasing and permitting process and altering the execution of the federal multiple use policy for marine areas.

Managing the Ocean Jacques Richardson, 1985. Contains selected material related to science, law, economics, and engineering as applied to the ocean and coastal environment. Sections include Resources, Research, Management, and governance, and The future.

Routledge Handbook of Ocean Resources and Management Hance D. Smith, Juan Luis Suárez de Vivero, Tundi S. Agardy, 2015-10-16. This comprehensive handbook provides a global overview of ocean resources and management by focusing on critical issues relating to human development and the marine environment, their interrelationships as expressed through the uses of the sea as a resource, and the regional expression of these themes. The underlying approach is geographical, with prominence given to the biosphere, political arrangements, and regional patterns, all considered to be especially crucial to the human understanding required for the use and management of the world's oceans. Part one addresses key themes in our knowledge of relationships between people and the sea on a global scale, including economic and political issues and understanding and managing marine environments. Part two provides a systematic review of the uses of the sea, grouped into food, ocean space, materials, and energy, and the sea as an environmental resource. Part three, on the geography of the sea, considers management strategies especially related to the state system and regional management developments in both core economic regions and the developing periphery.
