Laird, 2007-01-11 Feelings argues for the counter intuitive idea that feelings do not cause behavior but rather follow from behavior and are in fact the way that we know about our own bodily states and behaviors This point of view often associated with William James is called self perception theory Self perception theory can be empirically tested by manipulating bodily states and behaviors in order to see if the corresponding feelings are produced In this volume James D Laird presents

hundreds of studies all demonstrating that feelings do indeed follow from behavior Behaviors that have been manipulated include facial expressions of emotion autonomic arousal actions gaze and postures The feelings that have been induced include happiness anger fear romantic love liking disliking hunger and feelings of familiarity These feelings do not feel like knowledge because they are knowledge by acquaintance such as the knowledge we have of how an apple tastes rather than verbal knowledge by description such as the knowledge that apples are red round and edible Many professional theories of human behavior as well as common sense explain actions by an appeal to feelings as causes Laird argues to the contrary that if feelings are information about behaviors that are already ongoing feelings cannot be causes and that the whole mechanistic model of human behavior as caused in this sense seems mistaken He proposes an alternative cybernetic model involving hierarchically stacked control systems In this model feelings provide feedback to the control systems and in a further elaboration this model suggests that the stack of control systems matches a similar stack of levels of organization of the world An original contribution to the study of the relationship between feelings and behavior the volume will be of interest to social emotional and cognitive psychologists      **Mastering Adobe Captivate 6** Damien Bruyndonckx,2012-08-23 Step by step tutorial to build three projects including a demonstration a simulation and a random SCORM compliant quiz featuring all possible question slides Enhance your projects by adding interactivity animations sound and more Publish your project in a wide variety of formats enabling virtually any desktop and mobile devices to play your e learning content Deploy your e Learning content on a SCORM or AICC compliant LMS Learn by doing Each concept is immediately explained with a meaningful exercise      *Artificial Intelligence and Machine Learning* Mitra Baratchi,Lu Cao,Walter A. Other Topics for Keyword Search on Databases      *Trust-Based Observations* Craig Randall, 2020-07-30 The results are in  
observations are not improving teaching and learning Pertinently the Gates Foundation's recently completed effort to  
improve student outcomes through enhancing the teacher evaluation process failed to achieve substantive improvement The  
way observations are currently designed serve as an obstacle to teacher risk taking Teachers fear negative evaluations when  
their pedagogy is rated and they lack faith in being supported by supervisors because a trusting relationship between them  
and their observer has not been built Trust Based Observations Maximizing Teaching and Learning Growth is a schema  
changing evaluation model that understands people perform at their best when they feel safe and supported It begins with  
twelve 20 minute observations per week followed by collegial conversations driven by reflective questions sharing observed  
teaching strengths and the building of safe and trusting relationships with teachers Add the elimination of rating pedagogical  
skills and replace it with rating mindset and teachers trust When teachers fully embrace risk taking and innovation it leads to  
remarkable teaching transformations and improved student learning
