Guest, 2021-07-19 The novel coronavirus 2019 COVID 19

has caused a serious global pandemic in just one year. Nearly every country and territory in the world has been affected by the virus. The virulence and infection rate of the virus are profound and has required extreme social distancing measures across the globe in order to prevent overwhelming the healthcare services and hospitals. COVID 19 appears to have the greatest effects on elderly individuals and those who have co-morbid diseases such as diabetes and obesity. As the cases and death rate remain high, there are justified fears of this virus remaining for several months or years to come. To address this, a rapid and unprecedented worldwide mobilization effort has begun to identify effective treatments and develop vaccines. As these begin to be deployed and administered across the globe, many now feel the virus will be brought under control and lives will eventually return to normal. This new volume will increase readers' understanding of the ongoing COVID 19 pandemic through a series of chapters that address these concerns. Leading experts will discuss new treatment approaches, vaccine development, mental health aspects of the pandemic, and convey the results of survey studies. The book will be an excellent resource for researchers studying virology, metabolic diseases, respiratory disorders, and clinical scientists, physicians, drug companies, and healthcare services and workers.

The Respiratory Tract in Pediatric Critical Illness and Injury Derek S. Wheeler, Hector R. Wong, Thomas P. Shanley, 2008-12-18. The principal role of the respiratory system is to permit efficient exchange of respiratory gases O₂ and CO₂ with the environment. The respiratory system is unique in that it is constantly exposed to a barrage of foreign substances from

both the internal environment at any one point in time approximately one half of the cardiac output is received by the lungs and the external environment with each breath the respiratory tract is exposed to pollens viruses bacteria smoke etc According to the Centers for Disease Control and Prevention diseases of the respiratory system were the seventh and eighth leading causes of deaths in children aged 1 to 19 years in 2003 1 Dr George A Gregory one of the founding fathers of pediatric critical care medicine once estimated that acute respiratory failure accounts for nearly 50% of all admissions to the pediatric intensive care unit PICU 2 Just as important are the many diseases that affect the respiratory system that are not associated with acute respiratory failure but nevertheless constitute a major portion of the practice of pediatric critical care medicine some of which account for significant morbidity and mortality 3 Once again we would like to dedicate this textbook to our families and to the physicians and nurses who provide steadfast care every day in pediatric intensive care units across the globe Derek S Wheeler Hector R Wong Thomas P
