Fundamentals of Neuromechanics Francisco J. Valero-Cuevas, 2015-09-07. This book provides a conceptual and computational framework to study how the nervous system exploits the anatomical properties of limbs to produce mechanical function. The study of the neural control of limbs has historically emphasized the use of optimization to find solutions to the muscle redundancy problem. That is, how does the nervous system select a specific muscle coordination pattern when the many muscles of a limb allow for multiple solutions? I revisit this problem from the emerging perspective of neuromechanics that emphasizes finding and implementing families of feasible solutions instead of a single and unique optimal solution. Those families of feasible solutions emerge naturally from the interactions among the feasible neural commands, anatomy of the limb, and constraints of the task. Such an alternative perspective to the neural control of limb function is not only biologically plausible but sheds light on the most central tenets and debates in the fields of neural control, robotics, rehabilitation, and brain-body co-evolutionary adaptations. This perspective developed from courses I taught to engineers and life scientists at Cornell University and the University of Southern California and is made possible by combining fundamental concepts from mechanics, anatomy, mathematics, robotics, and neuroscience with advances in the field of computational geometry. **Fundamentals of Neuromechanics** is intended for neuroscientists, roboticists, engineers, physicians, evolutionary biologists, athletes, and physical and occupational therapists seeking to advance their understanding of neuromechanics. Therefore, the tone is decidedly pedagogical, engaging, integrative, and practical to make it accessible to people coming from a broad spectrum of disciplines. I attempt to tread the line between making the mathematical exposition accessible to life scientists and convey the wonder and complexity of neuroscience to engineers and computational scientists. While no one approach can hope to definitively resolve the important questions in these related fields, I hope to provide you with the fundamental background and tools to allow you to contribute to the emerging field of neuromechanics.

Safeguarding Cultural Property and the 1954 Hague Convention Emma Cunliffe, Paul Fox, 2022. Significant attention today focusses on heritage destruction, but the key international laws prohibiting it, the 1954 Hague Convention for the Protection of Cultural Property in the Event of Armed Conflict and its First and Second Protocols, 1954/1999, lay out two core strands to limit the damage: the measures of respect for armed forces and the safeguarding measures states parties should put in place in peacetime. This volume incorporates wide-ranging international perspectives from those in the academy together with practitioner insights from the armed forces and heritage professionals to explore the safeguarding regime. Its contributors consider such questions as whether state parties have truly taken all

possible steps as the Convention tasks them what we can learn from past practice and how the Convention is implemented today the implications of new trends in heritage law and management such as the rise of the World Heritage Convention and in the increasing focus on safe havens rather than refuges whether new methods of heritage management such as Risk Assessment theory can be applied and in a Convention specifically focussed on state parties what of their opponents armed non state actors Using a mix of case studies and theoretical explorations of new and existing methodologies the contributions cover a broad timespan from World War II to today with examples from Europe the Middle East and Africa Overall the volume s purpose is to promote wider understanding of the practical effectiveness of the Convention in the contemporary world by investigating the perceived opportunities and constraints the Convention offers today to protect cultural property in armed conflict and firmly establishing that such protection must begin in peace
