Explorations in Automatic Thesaurus Discovery Gregory Grefenstette, 1994-07-31 Explorations in Automatic Thesaurus Discovery presents an automated method for creating a first draft thesaurus from raw text. It describes natural processing steps of tokenization, surface syntactic analysis and syntactic attribute extraction. From these attributes, word and term similarity is calculated and a thesaurus is created showing important common terms and their relation to each other, common verb-noun pairings, common expressions and word family members. The techniques are tested on twenty different corpora ranging from baseball newsgroups, assassination archives, medical X-ray reports, abstracts on AIDS to encyclopedia articles on animals, even on the text of the book itself. The corpora range from 40,000 to 6 million characters of text and results are presented for each in the Appendix. The methods described in the book have undergone extensive evaluation. Their time and space complexity are shown to be modest. The results are shown to converge to a stable state as the corpus grows. The similarities calculated are compared to those produced by psychological testing. A method of evaluation using Artificial Synonyms is tested. Gold Standards evaluation shows that techniques significantly outperform non-linguistic based techniques for the most important words in corpora. Explorations in Automatic Thesaurus Discovery includes applications to the fields of information retrieval using established testbeds, existing thesaural enrichment, semantic analysis. Also included are applications showing how to create, implement and test a first draft thesaurus. Street, Dave Baker, Alison Tomlin, 2005-11-22 Abstract: This introduction sets the scene for the remainder of the book by considering first the international context of widespread concern about the improvement of numeracy skills. This is related to reform movements in the UK, the US and other countries aimed at modernising primary elementary school mathematics curricula. A detailed account is given of the National Numeracy Strategy in England, a systemic government-imposed response to concern about standards implemented in 1999/2000. This includes a discussion of the alternative meanings of numeracy. An earlier initiative sponsored by a UK charitable trust reacting to concern about primary numeracy was the Leverhulme Numeracy Research Programme. This large-scale longitudinal study and linked set of case study projects focusing on reasons for low attainment took place during 1997/2002. This book and each other in the same series is based on results of that research. The timescale fortuitously enabled the research team to also report on some effects of the systemic reform in the National

Education and Social Control Rachel Sharp, Anthony Green, Jacqueline Lewis, 2017-04-28 First published in 1975 this book offers a critique of some of the new perspectives in the sociology of education This is achieved through a case study of a progressive child centred school The book suggests that a liberal approach to education fails to appreciate how thoroughly a complex stratified industrial society penetrates the school It argues that the practice of progressive education may be a modern form of conservatism and an effective form of social control both in the narrow sense of achieving classroom discipline and in the wider sense of contributing to the promotion of a static social order It cautions against naive utopian solutions which see the freedom and self development of the child as an individualized process unrelated to a social context which may undermine the ideals of freedom and spontaneous self development In addition to offering a study of the implementation of the open approach to child development and pedagogy the book can also be read as a piece of critical sociology intended to make the reader look again at the way in which problems have been generated and solutions proposed within sociology and education *Piano Playing, with Piano Questions Answered* Josef Hofmann, 2023-09-18 Josef Hofmann's *Piano Playing with Piano Questions Answered* is a timeless masterpiece that delves into the art of piano playing with both depth and clarity Through detailed explanations and insightful analysis Hofmann provides a comprehensive guide for pianists of all skill levels His lucid prose and practical advice make this book indispensable for anyone looking to sharpen their piano skills Set against the backdrop of the golden age of piano playing Hofmann's work stands out as a beacon of knowledge and expertise in the field This book is a must read for anyone seeking to unlock the secrets of the piano and improve their technique Whether you are a seasoned pianist or a novice just starting out Hofmann's insights will surely inspire and elevate your playing to new heights *Elgar Encyclopedia of Critical Management Studies* Leo McCann, Ödül Bozkurt, Rachael Finn, Edward Granter, Carolyn Hunter, Nina Kivinen, Arun Kumar, Brian Wierman, 2025-04-09 This expansive Encyclopedia provides a detailed overview of Critical Management Studies CMS This exciting and iconoclastic area of research and scholarship has had a major impact on the academic field of business and management studies opening up possibilities for exploring radical and liberatory ideas in the often conservative and technicist realm of business school education Covering many of the substantive areas of CMS such as control and gender and providing reflexive discussions and critiques this Encyclopedia is a vital contribution to this important and unique field
