Sorensen, Henk A. van der Vorst, 1998-01-01 This book presents a unified treatment of recently developed techniques and current understanding about solving systems of linear equations and large scale eigenvalue problems on high performance computers It provides a rapid introduction to the world of vector and parallel processing for these linear algebra applications Topics include major elements of advanced architecture computers and their performance recent algorithmic development and software for direct solution of dense matrix problems direct solution of sparse systems of equations iterative solution of sparse systems of equations and solution of large sparse eigenvalue problems *Applied Parallel Computing* Bo Kagström, Erik Elmroth, Jack Dongarra, Jerzy Wasniewski, 2007-09-22 This book constitutes the thoroughly refereed post proceedings of the 8th International Workshop on Applied Parallel Computing PARA 2006 It covers partial differential equations parallel scientific computing algorithms linear algebra simulation environments algorithms and applications for blue gene L scientific computing tools and applications parallel search algorithms peer to peer computing mobility and security algorithms for single chip multiprocessors

Numerical Linear Algebra for Applications in Statistics James E. Gentle, 2012-12-06 Numerical linear algebra is one of the most important subjects in the field of statistical computing Statistical methods in many areas of application require computations with vectors and matrices This book describes accurate and efficient computer algorithms for factoring matrices solving linear systems of equations and extracting eigenvalues and eigenvectors Although the book is not tied to any particular software system it describes and gives examples of the use of modern computer software for numerical linear algebra An understanding of numerical linear algebra requires basic knowledge both of linear algebra and of how numerical data are stored and manipulated in the computer The book begins with a discussion of the basics of numerical computations and then describes the relevant properties of matrix inverses matrix factorizations matrix and vector norms and other topics in linear algebra hence the book is essentially self contained The topics addressed in this book constitute the most important material for an introductory course in statistical computing and should be covered in every such course The book includes exercises and can be used as a text for a first course in statistical computing or as supplementary text for various courses that emphasize computations James Gentle is University Professor of Computational Statistics at George Mason University During a thirteen year hiatus from academic work before joining George Mason he was director of research and design at the world's largest independent producer of Fortran and C general purpose scientific software libraries These libraries implement many algorithms for numerical linear algebra He is a Fellow of the American Statistical Association and member of the International Statistical

Institute He has held several national High Performance Computing Michela Taufer, Bernd Mohr, Julian M. Pardalos, Gerardo Toraldo, 2013-12-01 This book contains a selection of papers presented at the conference on High Performance Software for Nonlinear Optimization HPSN097 which was held in Ischia Italy in June 1997 The rapid progress of computer technologies including new parallel architectures has stimulated a large amount of research devoted to building software environments and defining algorithms able to fully exploit this new computational power In some sense numerical analysis has to conform itself to the new tools The impact of parallel computing in nonlinear optimization which had a slow start at the beginning seems now to increase at a fast rate and it is reasonable to expect an even greater acceleration in the future As with the first HPSNO conference the goal of the HPSN097 conference was to supply a broad overview of the more recent developments and trends in nonlinear optimization emphasizing the algorithmic and high performance software aspects Bringing together new computational methodologies with theoretical advances and new computer technologies is an exciting challenge that involves all scientists willing to develop high performance numerical software This book contains several important contributions from different and complementary standpoints Obviously the articles in the book do not cover all the areas of the conference topic or all the most recent developments because of the large number of new theoretical and computational ideas of the last few years *High Performance Computing* Yunquan Zhang, Kenli Li, Zheng Xiao, 2013-10-01 This book constitutes the refereed proceedings of the National Annual Conference on High Performance Computing HPC 2012 held in Zhangjiajie China in October 2012 The 14 revised full papers presented were carefully reviewed and selected from 260 submissions The papers address issues such as parallel architecture GPU

computing resource scheduling parallel algorithm and performance evaluation **Scientific Computing** Michael T. Heath, 2018-11-14 This book differs from traditional numerical analysis texts in that it focuses on the motivation and ideas behind the algorithms presented rather than on detailed analyses of them It presents a broad overview of methods and software for solving mathematical problems arising in computational modeling and data analysis including proper problem formulation selection of effective solution algorithms and interpretation of results In the 20 years since its original publication the modern fundamental perspective of this book has aged well and it continues to be used in the classroom This Classics edition has been updated to include pointers to Python software and the Chebfun package expansions on barycentric formulation for Lagrange polynomial interpretation and stochastic methods and the availability of about 100 interactive educational modules that dynamically illustrate the concepts and algorithms in the book Scientific Computing An Introductory Survey Second Edition is intended as both a textbook and a reference for computationally oriented disciplines that need to solve mathematical problems **Numerical Methods for Scientists and Engineers** Zakeriya Altaç, 2024-10-15 Numerical Methods for Scientists and Engineers With Pseudocodes is designed as a primary textbook for a one semester course on Numerical Methods for sophomore or junior level students It covers the fundamental numerical methods required for scientists and engineers as well as some advanced topics which are left to the discretion of instructors The objective of the text is to provide readers with a strong theoretical background on numerical methods encountered in science and engineering and to explain how to apply these methods to practical real world problems Readers will also learn how to convert numerical algorithms into running computer codes Features Numerous pedagogic features including exercises pros and cons boxes for each method discussed and rigorous highlighting of key topics and ideas Suitable as a primary text for undergraduate courses in numerical methods but also as a reference to working engineers A Pseudocode approach that makes the book accessible to those with different or no coding backgrounds which does not tie instructors to one particular language over another A dedicated website featuring additional code examples quizzes exercises discussions and more <https://github.com/zaltac/NumMethodsWPpseudoCodes> A complete Solution Manual and PowerPoint Presentations are available free of charge to instructors at www.routledge.com/9781032754741 **High Performance Computing for Computational Science - VECPAR 2008** José M.
