6.6 EXPEDITING THE SOLUTION OF SYSTEMS OF NONLINEAR ALGEBRAIC EQUATIONS

6.6.1 Concepts Demonstrated

Complex chemical equilibrium calculations.

6.6.2 Numerical Methods Utilized

Solution of systems of nonlinear algebraic equations, and techniques useful for effective solutions and for examining possible multiple solutions of such systems.

6.6.3 Problem Statement

The following reactions are taking place in a constant volume, gas-phase batch reactor:

$$A + B \leftrightarrow C + D$$
$$B + C \leftrightarrow X + Y$$
$$A + X \leftrightarrow Z$$

A system of algebraic equations describes the equilibrium of the preceding reactions. The nonlinear equilibrium relationships utilize the thermodynamic equilibrium expressions, and the linear relationships have been obtained from the stoichiometry of the reactions.

$$K_{C1} = \frac{C_C C_D}{C_A C_B} \qquad K_{C2} = \frac{C_X C_Y}{C_B C_C} \qquad K_{C3} = \frac{C_Z}{C_A C_X}$$

Numerical Solution of Systems of Nonlinear Algebraic Equations George D. Byrne,Charles A. Hall,2014-05-10 Numerical Solution of Systems of Nonlinear Algebraic Equations contains invited lectures of the NSF CBMS Regional Conference on the Numerical Solution of Nonlinear Algebraic Systems with Applications to Problems in Physics Engineering and Economics held on July 10 14 1972 This book is composed of 10 chapters and begins with the concepts of nonlinear algebraic equations in continuum mechanics The succeeding chapters deal with the numerical solution of quasilinear elliptic equations the nonlinear systems in semi infinite programming and the solution of large systems of linear algebraic equations These topics are followed by a survey of some computational techniques for the nonlinear least squares problem The remaining chapters explore the problem of nonlinear functional minimization the modification methods and the computer oriented algorithms for solving system These chapters also examine the principles of contractor theory of solving equations This book will prove useful to undergraduate and graduate students   Numerical Methods for Nonlinear Algebraic Equations British Computer Society,1970   *Numerical Methods for Nonlinear Partial Differential Equations* Sören Bartels,2015-01-19 The description of many interesting phenomena in science and engineering leads to infinite dimensional minimization or evolution problems that define nonlinear partial differential equations While the development and analysis of numerical methods for linear partial differential equations is nearly complete only few results are available in the case of nonlinear equations This monograph devises numerical methods for nonlinear model problems arising in the mathematical description of phase transitions large bending problems image processing and inelastic material behavior For each of these problems the underlying mathematical model is discussed the essential analytical properties are explained and the proposed numerical method is rigorously analyzed The practicality of the algorithms is illustrated by means of short implementations

McEneaney,2006 The central focus of this book is the control of continuous time continuous space nonlinear systems Using

new techniques that employ the max plus algebra the author addresses several classes of nonlinear control problems including nonlinear optimal control problems and nonlinear robust H infinity control and estimation problems Several numerical techniques are employed including a max plus eigenvector approach and an approach that avoids the curse of dimensionality Well known dynamic programming arguments show there is a direct relationship between the solution of a control problem and the solution of a corresponding Hamilton Jacobi Bellman HJB partial differential equation PDE The max plus based methods examined in this monograph belong to an entirely new class of numerical methods for the solution of nonlinear control problems and their associated HJB PDEs they are not equivalent to either of the more commonly used finite element or characteristic approaches The potential advantages of the max plus based approaches lie in the fact that solution operators for nonlinear HJB problems are linear over the max plus algebra and this linearity is exploited in the construction of algorithms The book will be of interest to applied mathematicians engineers and graduate students interested in the control of nonlinear systems through the implementation of recently developed numerical methods Researchers and practitioners tangentially interested in this area will also find a readable concise discussion of the subject through a careful selection of specific chapters and sections Basic knowledge of control theory for systems with dynamics governed by differential equations is required *Numerical Methods for Nonlinear Variational Problems* R.
