developed states the healthy and the unhealthy are causing problems for the progress of scientific research The international community is moving towards a human rights approach in addressing these concerns Such an approach will be piecemeal and ineffective so long as fundamental issues about economic social and cultural rights the so called second generation of human rights are not addressed This book argues that in order to be able to meaningfully apply a human rights framework to the governance of the human genome the international human rights framework should be based on a unified theory of human rights where the distinction between positive and negative rights is set aside The book constructs a common heritage concept with the right to development at its core and explores the content of the right to development through rational human rights theory It is argued that the notion of property rights in the human genome should be placed within the context of protecting human rights including the right to development The concept of common heritage of humanity contrary to the widely held belief that it is in opposition to patenting of gene sequences supports human rights based conceptions of property rights This book fills a gap in the literature on international legal governance of the human genome will provide an essential reference point for research into the right to development development issues in bioethics the role of international institutions in law making and research governance     Community Health Nursing Karen Saucier Lundy, Sharyn Janes, 2001 The book is designed to be used throughout the undergraduate nursing curriculum as well as in traditional community health nursing theory and clinical courses Ideal courses include Community Health Nursing Nursing Care III Nursing Care of the Community Community Nursing Clinical and Community Nursing Theory     **Client Education** Mary Miller, Pamela Rae Stoeckel, 2011 Client Education Theory and Practice focuses on health education and the role of health care providers especially nurses in working with clients such as individuals families and groups in health care institutions and community health settings It covers the thorough assessment of clients in preparation for health education and examines the unique characteristics of children adults and culturally diverse learners Client Education Theory and Practice details how to prepare a teaching plan write learning objectives and select teaching strategies and instructional materials with ample examples Further a comprehensive examination of formative and summative evaluation completes the book Each chapter includes a sample client based teaching plan that incorporates the theory presented to help students understand and apply their knowledge
