Pheno-phospholipids and Lipo-phenolics

Mohamed Fawzy Ramadan, 2021-02-15 Natural phenolics are powerful bioactive compounds but their use as antioxidant agents in lipid based foodstuffs and cosmetics is limited due to their hydrophilic traits A promising technique to overcome low solubility of phenolics is to increase their hydrophobicity by grafting with lipophilic moiety to form lipid enriched phenolics lipo phenolics Another way to enhance the amphiphilic traits of phenolics is by lipophilization with phospholipids in a suitable solvent to form phenolics enriched phospholipids pheno phospholipids Both functionalized phenolics phenolipids exhibit high bioavailability and antioxidative potential Functional phenolics enriched phospholipids pheno phospholipids play an important role in enhancing the functional properties of both phenolic compounds and phospholipids in food for their use in nutrition and health Phenolipids have also found applications on an industrial scale likely due to low costs the availability of starting material and safety Recent advances in the field of lipophilization allow accessing molecules with high potency and targeted action covering a wide spectrum of bioactivities Owing to their cost and availability phenolipids find applications in niche sectors such as cosmetics and pharmaceuticals as well as in the novel food This book reports on the chemistry preparation and functionality of lipid enriched phenolics lipo phenolics broadening their applications in food

pharmaceuticals and cosmetics The strategies of the lipophilization of phenolics the effect of modification on the biological properties and potential applications of the resulting lipo phenolics are reviewed The text also discusses the preparation physicochemical characteristics and functional properties of phenolipids and phytosomes including the latest developments and their current industrial status *Nutritional Biochemistry* Tom Brody,1999 This real world approach allows students to come away with a realistically informed view of the basis for much of our understanding of nutritional biochemistry

Lipid Biochemistry J.L. Harwood, M.I. Gurr, 2013-04-17 Lipids can usually be extracted easily from tissues by making use of their hydrophobic characteristics However such extractions yield a complex mixture of different lipid classes which have to be purified further for quantitative analysis Moreover the crude lipid extract will be contaminated by other hydrophobic molecules e g by intrinsic membrane proteins Of the various types of separation processes thin layer and column chromatography are most useful for intact lipids High performance liquid chromatography HPLC is also rapidly becoming more popular especially for the fractionation of molecular species of a given lipid class The most powerful tool for quantitation of the majority of lipids is gas liquid chromatography GLC The method is very sensitive and if adapted with capillary columns can provide information with regard to such subtle features as the position or configuration of substitutions along acyl chains By coupling GLC or HPLC to a radioactivity detector then the techniques are also very useful for metabolic measurements Although research laboratories use generally sophisticated analytical methods such as GLC to analyse and quantify lipid samples chemical derivatations are often used in hospitals For these methods the lipid samples are

derivatized to yield a product which can be measured simply and accurately usually by colour Thus total triacylglycerol cholesterol or phospholipid phosphorus can be quantitated conveniently without bothering with the extra information of molecular species etc which might be determined by more thorough analyses REFERENCES Christie w w 1982 Lipid Analysis 2nd edn Pergamon Press Oxford **Milk and Dairy Products in Human Nutrition** Young W.
