Gabor Liposits, MD<sup>1,2,3</sup>; Ylva Ornvall, PhD<sup>4,5</sup>; Stein Kaasa, PhD<sup>6,7</sup>; Pia Österlund, PhD<sup>8,9</sup>; and Tommy Cederholm, PhD<sup>10,11</sup>

**QUESTION ASKED:** Are patients with cancer receiving appropriate nutritional screening, assessment, and interventions?

**SUMMARY ANSWER:** Nutrition plays a crucial role for patients with cancer; however, nutritional problems are often underprioritized, underdiagnosed, and undertreated, thereby affecting treatment outcomes and quality of life. The authors provide an evidence-based guidance focusing exclusively on the practical aspects of nutrition in oncology, which will hopefully help healthcare professionals improve patient care (Fig).

**WHAT WE DID:** We summarized the clinical aspects of the available evidence-based guidelines and turned them into a practical approach that may be used by healthcare professionals.

**WHAT WE FOUND:** If healthcare providers are aware of nutritional issues, the prevention, delay, treatment, or even reversal of sarcopenia may be feasible.

**REAL-LIFE IMPLICATIONS:** Prevention, early identification of patients at risk, accurate diagnosis, personalized intervention, and follow-up are cornerstones of the management of malnutrition and its consequences: sarcopenia and cachexia.
