## **Nutritional Neuroscience:**

Nutritional Neuroscience Harris R. Lieberman, Robin B. Kanarek, Chandan Prasad, 2005-03-18 Scientific and commercial interest in the field of nutritional neuroscience has grown immensely over the last decade. Today a broad range of dietary supplements, foods for weight loss, functional foods, nutraceuticals, and medical foods are widely available. Many of these products are marketed for their effects on behavior or brain function, which relates directly to nutritional neuroscience and raises issues regarding their safety and efficacy. The only comprehensive reference on this subject, *Nutritional Neuroscience*, discusses the relationship of nutrition to behavior and neuroscience. Following a review of fundamental issues and methods, the book covers the effects of macronutrients and micronutrients on brain function and behavior. Chapters are devoted to the effects of a wide range of foods, specific nutrients, food constituents, and food additives on cognitive behavior and development. The final section examines foods and supplements that modulate brain function. With a broad range of information presented in a simple and straightforward manner, this book provides an ideal introduction to nutritional neuroscience. The depth of information and comprehensive coverage also make this an essential reference for specialists involved in nutrition, neuroscience, pharmacology, psychology, and related disciplines.

*Nutrition and Psychiatric Disorders* Wael Mohamed, Firas Kobeissy, 2024-06-28 The book explores the intricate relationship between nutrition, brain function, and psychiatric disorders. The first section of the book delves into the neurobiological aspects of psychiatric disorders, including neuroanatomy, neuropathology, biochemical, and neuropharmacology factors that play a role in the development of these disorders. It also discusses the impact of human nutrition on brain function and the implications of nutrition and metabolism on psychological functioning. The next section focuses on the diet-brain connection, exploring nutritional psychiatry and the current state of evidence, the role of the microbiome, and the effects of certain foods such as chocolate and coffee on mood and mood disorders. The chapters also examine the impact of diet on mental health and cognition across the lifespan and provide a case study of the relationship between diet and psychological health. In the final section, the book delves into the nutritional treatment of psychiatric disorders, including the psychopharmacology of psychiatric disorders and food intake, and multidisciplinary approaches to psychiatric treatment. Overall, this book offers a comprehensive and evidence-based examination of the complex relationship between nutrition, brain function, and psychiatric disorders and provides a foundation for further research and development of effective nutritional interventions for the treatment of these disorders.

Nutritional influences on human neurocognitive functioning Michael Smith, Andrew Scholey, 2014-11-04 You are what you eat It's a saying that we've all heard time and time again The notion that good nutrition is essential for adequate growth and sound physical wellbeing is very well established Further in recent years there has been an overwhelming increase in research dedicated to better understanding how nutritional factors influence cognition and behaviour For example several studies have suggested that higher foetal exposure to omega 3 fatty acids and B vitamins such as folate promotes neurodevelopment B vitamins may also play a role in neurocognitive functioning in later life with some suggestion that lower vitamin B levels are associated with increased risk of dementia although randomised controlled trials investigating B vitamin supplementation as a cognitive enhancer in the elderly have provided inconclusive evidence as to the benefits of such therapy for dementia In fact the nutritional underpinnings of Alzheimer's disease and other disorders of cognitive ageing is becoming a much researched topic In addition consumption of several other foods has been found to convey more acute cognitively enhancing effects For example ingestion of carbohydrates e.g. glucose caffeine resveratrol and several nutraceutical herbal extracts has been associated with short term improvements in cognitive performance Beyond specific micronutrients and macronutrients the current literature seems to support anecdotal evidence that consumption of a balanced breakfast is crucial to various measures of school performance including attention in the classroom What is clear from this emerging literature is that the relationship between nutritional status and neurocognitive functioning at various stages of the lifespan is complex An aim of this Research Topic is to bring together some recent empirical findings reviews and commentaries of the literature to date and opinion pieces relating to future directions for this burgeoning field
