Defining the Lung Cancer Problem 1 Lung cancer is the leading cause of cancer death in the world It kills almost as many Americans as cancers of the breast prostate colon rectum pancreas and 2 kidney combined and accounts for 28.6% of all US cancer deaths With an increase in the 5 year relative survival rate from 13% to only 16% in the more than 23 years from 1974 to the present it will take us another 840 years to eradicate lung cancer deaths if we do not improve the current rate of progress As discussed in this text lung cancer prevention has received substantial attention The decrease in smoking in recent decades has helped but smoking is not the only problem Lung cancer in people who have never smoked is currently the 5th leading cause of cancer death in the United States Several factors contribute to the lethality of lung cancer including the rapidity of tumor growth advanced stage at diagnosis due to nonspecificity of early symptoms and the uncertain efficacy of screening early development of metastases and resistance to therapy Several chapters in this book discuss new molecular targets that may be potentially exploitable in the future as well as discussing our track record to date in exploiting them

Rare Tumors In Children and Adolescents Dominik Schneider, Ines B. Brecht, Thomas A. Olson, Andrea Ferrari, 2012-01-07 This is the first book to be devoted exclusively to rare tumors in children and adolescents and its aim is to provide up to date information on their diagnosis and clinical management The opening section addresses general issues including epidemiology

risk factors etiology biology and genetics early detection and screening It also discusses solutions to assist in the management of rare tumors such as international networking and internet platforms In the second section specific malignancies are described with practical guidance on diagnostic workup multimodal therapy follow up and adverse effects Discussion of differential diagnosis encompasses both frequent and rare tumor types which should enable the clinician to take rare entities into account during the diagnostic assessment Each chapter goes on to provide detailed therapeutic guidelines for specific rare tumors The authors are a multidisciplinary group of specialists who have dedicated themselves to this group of tumors
