Current Topics in Developmental Biology, 1998-11-02 This Series provides a comprehensive survey of the major topics in the field of developmental biology The volumes are valuable to researchers in animal and plant development as well as to students and professionals who want an introduction to cellular and molecular mechanisms of development The Series has recently passed its 30 year mark making it the longest running forum for contemporary issues in developmental biology

Cognition Cornelia I. Bargmann, Daphne Bavelier, David Stewart, Terrence Joseph Sejnowski, Bruce Stillman, 2014 The Proceedings of the 79th Symposium capture many of the tremendous discoveries currently being made by neuroscientists and psychologists working on cognitive processes at scales varying from the molecular to circuit to whole brain and theoretical studies Major advances in understanding cognitive function including learning memory language and decision making are being made through the application of powerful new techniques and approaches The scientific results discussed in this volume shed light on many areas of normal brain function but also offer novel insights into the treatment of psychiatric neurological and neurodegenerative diseases This volume includes state of the art neurobiological research at genetic molecular cellular circuit and whole brain resolution Additional chapters address computational neuroscience behavioral and psychophysical studies and evolutionary comparative neuroscience The Conversations included in this volume are based on interviews conducted during the Symposium and offer a broader anecdotal perspective on this fascinating subject by many of the world's leading cognitive neuroscientists The Symposium Proceedings provides an integrative overview of the current state of the field as well as a glimpse into the emerging connections between molecular cellular circuit mechanisms and higher brain function by leading authorities in the field *Clocks and Rhythms* Bruce Stillman, David Johnston Stewart, Terri Grodzicker, 2007 Proceedings of a symposium which included sessions and poster sessions covering molecular strategies aimed at understanding the structure and function of biological clocks and rhythms

Forthcoming Books Rose Arny, 1998 **Signaling and Gene Expression in the Immune System**, 1999 Provides a dialogue on the nature of the membrane signals and intracytoplasmic events that provoke immunity The debate ranges over biochemistry physiology molecular genetics as well as classical cellular immunology Input came from over 70 of the world's leading investigators *The Ribosome*, 2001 *Biological Responses to DNA Damage*, 2000 Living cells have evolved many ways of coping with metabolic events and environmental influences that damage DNA These mechanisms and the frequent progression to cancer that results when they go awry are reviewed in this volume by authors from over sixty of the world's leading laboratories The topics discussed include DNA repair mutagenesis and other damage tolerance functions checkpoint control apoptosis and adaptation They draw from studies on human and yeast cells Current but with a valuable historical perspective this volume has the depth and lasting value typical of this most prestigious series and is essential reading for investigators of DNA replication cell cycle control and tumorigenesis **Molecular Approaches to Controlling Cancer**

The Cardiovascular System Bruce Stillman, 2002 Normal cardiovascular function requires the concerted action of many cell types each capable of adaptive gene expression in response to developmental physiological and pathological cues The genetic basis of cardiovascular function development and disease is an area of intense investigation in the hope of significant insights into the heart and vessels basic workings and improvements in diagnosis and therapy This latest volume in a prestigious book series presents a remarkable survey of current progress in these efforts through the contributions of over fifty of the world's leading investigators Sections are devoted to angiogenesis cardiogenesis homeostasis development vascular biology and cardiovascular repair and therapy The book is an essential source of ideas discoveries and references for clinical scientists and physicians interested in basic cardiac biology hypertension atherosclerosis coronary artery disease and heart failure

Epigenetics Bruce Stillman, David Stewart, 2004 The importance of epigenetic regulation of gene expression particularly in higher organisms is now clear and the 2004 Cold Spring Harbor Annual Symposium provided many new examples as well as insights into the underlying mechanisms The resulting volume with over 60 papers from experts across the field covers various aspects of nuclear organization and dynamics genomic imprinting chromosomal inactivation and other examples of gene silencing the histone and DNA modifications associated with these conditions and the roles of RNA and protein regulators in establishing and maintaining these states

The Genome of Homo Sapiens Bruce Stillman, David Stewart, 2003 The Human Genome Project was completed in 2003 50 years after the discovery of the structure of DNA and 17 years after an influential debate at the annual Cold Spring Harbor Laboratory Symposium about the Project's feasibility The 2003 Symposium was dedicated to examining what has been learned so far from the human genome sequence This book contains over sixty contributions from the world's leaders in this field and covers genome structure and evolution methods of data analysis lessons from species comparison and the application of sequence data to the understanding of disease

Genome Research, 1998 **Belgian Journal of Zoology**, 1998

Regulatory RNAs Bruce Stillman, David Johnston Stewart, 2006 Explores how the application of RNA technologies combined with a growing understanding of the molecular basis of many RNA processes is yielding new insights into the treatment of many human diseases
