Pattern Joan Evans, **Pattern** Joan Evans, 1975 *Pattern: A Study of Ornament in Western Europe from 1180 to 1900, Vol. 1* Joan Evans, 1931 *Pattern: A Study of Ornament in Western Europe from 1180 to 1900, Vol. 2* Joan Evans, 1931 Theory of Society, Volume 2 Niklas Luhmann, 2013-08-21 This second volume of Niklas Luhmann's two part final work was first published in German in 1997. The culmination of his thirty year theoretical project to reconceptualize sociology, it offers a comprehensive description of modern society. Beginning with an account of the fluidity of meaning and the accordingly high improbability of successful communication, Luhmann analyzes a range of communicative media including language, writing, the printing press, and electronic media, as well as success media such as money, power, truth, and love, all of which structure this fluidity and make communication possible. The book asks what gives rise to functionally differentiated social systems, how they evolve, and how social movements, organizations, and patterns of interaction emerge. The advent of the computer and its networks, which triggered potentially far reaching processes of restructuring, receives particular attention. A concluding chapter on the semantics of modern society's self description bids farewell to the outdated theoretical approaches of old Europe, that is to ontological, holistic, ethical, and critical interpretations of society, and argues that concepts such as the nation, the subject, and postmodernity are vastly overrated. In their stead, society, long considered a suspicious term by sociologists, is open to all kinds of reification, is defined in purely operational terms. It is the always uncertain answer to the question of what comes next in all areas of communication. *Motion Structures* Zhong You, Yan Chen, 2011-08-26 The Open Access version of this book available at <http://www.routledge.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license. Motion structures are simply assemblies of resistant bodies connected by movable joints. Unlike conventional structures, they allow large shape transformations to satisfy practical requirements, and they can be used in shelters, emergency structures, and exhibition stands, aircraft, morphing wings, satellite solar panels, and space antennas, morphing core materials for composites, medical implants for minimum invasive surgery. Though traditionally the subject falls within structural engineering, motion structures are more closely related to other mechanisms, and they draw on the principles of kinematic and geometrical analysis in their design. Indeed, their design and analysis can be viewed as an extension of the theory of mechanisms, such as rigid origami, and can make effective use of a wealth of mathematical principles. This book outlines the relevant underlying theory of motion structural concepts and uses a number of innovative but simple structures as examples. **The Anonymous Text** Simone Celine Marshall, 2010 One of the most intriguing features of *The Assembly of Ladies*, an anonymous fifteenth century Middle English poem, is that it has remained in print in anthologies for over 500 years. Why would a poem about courtly love remain so popular for so long? This book analyses the literary and historical publishing evidence about *The Assembly of Ladies* to show that the poem has remained in print not for its literary merit, but because its anonymity has allowed it to be

appropriated by editors for their own particular social and political causes The book draws together textual contextual and intertextual evidence about all twenty editions of *The Assembly of Ladies* By examining closely how and why a single text is or has been included in canonical traditions over time this study not only reveals the material presence of the text in various traditions but also brings to the foreground the categories scholars continue to use while defining or imagining those traditions

The Philosophy of Enchantment R. G. Collingwood, 2005 This is the long awaited publication of a set of writings by the British philosopher historian and archaeologist R G Collingwood on critical anthropological and cultural themes only hinted at in his previously available work At the centre of the book are six chapters of a study of folktale and magic composed by Collingwood in the mid 1930s and intended for development into a book Here Collingwood applies the principles of his philosophy of history to problems in the long term evolution of human society and culture This is preceded in Part I by a range of contextualizing material on such topics as the relations between music and poetry the nature of language the value of Jane Austen s novels the philosophy of art and the relations between aesthetic theory and artistic practice Part III of the volume consists of two essays one on the relationship between art and mechanized civilization and the second written in 1931 on the collapse of human values and civilization leading up to the catastrophe of armed conflict These offer a devastating analysis of the consequences that attend the desertion of liberal principles indeed of all politics as such in the ultimate self annihilation of military conquest The
