Philosophy Of Biology An Episodic History:

The Philosophy of Biology Marjorie Grene, David Depew, 2004-08-02 Does life for the living differ from that of the non living If so how And how in that case does biology as the study of living things differ from other sciences These questions are examined through an exploration of episodes in the history of biology and philosophy *Brill's Companion to the Philosophy of Biology* Andrea Borghini, Elena Casetta, 2019-12-16 In this volume Andrea Borghini and Elena Casetta introduce a wide spectrum of key philosophical problems related to life sciences in a neat framework and an accessible style with a special emphasis on metaphysical issues The volume is divided into three parts The first addresses the two main questions stemming from life sciences what is life and what is the correct understanding of the theory of evolution The second part looks at metaphysical questions concerning biological entities environments species organisms and biological individuals The third part focuses on theoretical questions of particular ethical and political significance sex and gender the biotechnological revolution and the evolution of behavior and culture Each chapter is followed by a list of further readings *Kant's Theory of Biology* Ina Goy, Eric Watkins, 2014-02-27 During the last twenty years Kant's theory of biology has increasingly attracted the attention of scholars and developed into a field which is growing rapidly in importance within Kant studies The volume presents fifteen interpretative essays written by experts working in the field covering topics from seventeenth and eighteenth century biological theories the development of the philosophy of biology in Kant's writings the theory of organisms in Kant's Critique of the Power of Judgment and current perspectives on the teleology of nature **Exploring the Contributions of Women in the History of Philosophy, Science, and Literature, Throughout Time** Chelsea C. Harry, George N. Vlahakis, 2023-09-30 This book explores contributions by some of the most influential women in the history of philosophy science and literature Ranging from Sappho and Sophie Germain to Stebbing and Evelyn Fox Keller this work ultimately demonstrates the impact these non canonical sometimes unknown or hidden sources had or may have had on the recognized male leaders in their fields from Aristotle to Pascal Kant Whitehead and Russell Chapters reflect philosophical pluralism both analytic and continental themes and cover figures reaching across the entire history of ideas in the West from pre historic times to the twentieth century Anyone interested in coming to know or in preparing to teach women in the history of philosophy science and literature will appreciate this collection and its myriad insights into the still unrecognized voices of non canonical sources across these disciplines The Life Sciences in Early Modern Philosophy Ohad Nachtomy, Justin E. H. Smith, 2014 This volume explores the intersection between early modern philosophy and the life sciences by presenting the contributions of important but often neglected figures such as Cudworth Grew Glisson Hieronymus Fabricius Stahl Gallego Hartsoeker and More as well as familiar figures such as Descartes Spinoza Leibniz Malebranche and Kant *Philosophies of the Sciences* Fritz Allhoff, 2015-12-02 A collection of essays discussing a wide range of sciences and the central philosophical issues associated with them presenting the sciences collectively to encourage a greater understanding of their associative

theoretical foundations as well as their relationships to each other Offers a new and unique approach to studying and comparing the philosophies of a variety of scientific disciplines Explores a wide variety of individual sciences including mathematics physics chemistry biology psychology sociology and economics The essays are written by leading scholars in a highly accessible style for the student audience Complements more traditional studies of philosophy of science The Natural Law of Cycles James H. Bunn, 2017-07-28 The Natural Law of Cycles assembles scientific work from different disciplines to show how research on angular momentum and rotational symmetry can be used to develop a law of energy cycles as a local and global influence Angular momentum regulates small scale rotational cycles such as the swimming of fish in water the running of animals on land and the flight of birds in air Also it regulates large scale rotation cycles such as global currents of wind and water James H Bunn introduces concepts of symmetry balance and angular momentum showing how together they shape the mobile symmetries of animals Chapter 1 studies the configurations of animals as they move in a head first direction Chapter 2 shows how sea animals follow currents and tides generated by the rotational cycles of the earth In chapter 3 Bunn explores the biomechanical pace of walking as a partial cycle of rotating limbs On a large scale angular momentum governs balanced shifts in plate tectonics Chapter 4 begins with an examination of rotational wind patterns in terms of the counter balancing forces of angular momentum The author shows how these winds augment the flights of birds during migrations A final chapter centres on the conservation of energy as the most basic principle of science Bunn argues that in the nineteenth century the unity of nature was seen in the emergent concept of energy not matter as the source of power including the movements of animals and machines In each chapter Bunn features environmental writers who celebrate mobile symmetries This book will interest students naturalists and advocates of the environmental movement

The Living Signature: The Body's Power to Heal and the Question of Design Dr. Octavian Caius Obeada, 2025-06-26 In The Living Signature The Body's Power to Heal and the Question of Design science and spirit converge in a captivating exploration of the human body as more than mere biology Drawing from philosophy theology medicine and biology this book challenges the view that life is the product of blind chance From the cellular dance of regeneration to the breathtaking orchestration of body systems it reveals signs of purpose woven into the fabric of life itself For the scientist the skeptic and the seeker alike this is an invitation to see the body not just as alive but as alive with meaning I will praise thee for I am fearfully and wonderfully made wrote a grateful King David in Psalm 139 three thousand years ago He didn't know the half of it In this marvelous book Dr Octavian Caius Obeada focuses on the marvelous ability of life to regenerate and heal itself surveying what philosophers and theologians throughout the ages have surmised and detailing the intricate molecular mechanisms that have been discovered by scientists only in recent decades The result is a tour de force showcasing the intelligent design of life Michael J Behe PhD Professor of Biological Sciences at Lehigh University in Pennsylvania and a Senior Fellow at Discovery Institute's Center for Science and Culture and author of Darwin's Black Box The Living Signature

by Dr Octavian Caius Obeada is a profound exploration of the human body's regenerative capacity framed as both a scientific marvel and a philosophical clue to purposeful design Drawing on decades of medical experience and insights from biology theology and systems thinking the book challenges reductionist views by asking whether healing is merely mechanical or a message of intention With compelling case studies and a multidisciplinary lens this work invites readers to see the human body not as an accident but as a living signature of meaning and design Adrian Anthony Dormans MD FAAFP From skin and bone to organs and DNA the regenerative capabilities of the human body are not only astonishing they hint at something deeper The Living Signature lays out thoughtful well researched reflections and challenges you to consider whether the complexity and order we see in ourselves could truly be the product of blind chance or the body itself is whispering something about its origin a message not of randomness but of meaning Costiuc Alexandru M D Specialist in

Political Affect John Protevi, 2009-10-13 For many philosophers the rational cognitive Cartesian subject defines the human or at least defines what humans should be Yet some recent cognitive science as well as the philosophy of Deleuze and Guattari has called into question such individuality and rationality and emphasized social and emotional subjectivity Understanding such embodied and embedded subjectivity John Protevi argues demands the notion of bodies politic In Political Affect Protevi investigates the relationship between the social and the somatic how our bodies minds and social settings are intricately and intimately linked Bringing together concepts from science philosophy and politics he develops a perspective he calls political physiology to indicate that subjectivity is socially conditioned and sometimes bypassed in favor of a direct connection of the social and the somatic as with the politically triggered basic emotions of rage and panic Protevi's treatment of affective cognition in social context breaks new theoretical ground insisting that subjectivity be studied both in its embodied expression and in terms of the distribution of affective cognitive responses in a population Moving beyond the theoretical Protevi applies his concept of political affect to show how unconscious emotional valuing shaped three recent emotionally charged events the cold rage of the Columbine High School slayings the racialized panic that delayed rescue efforts in Hurricane Katrina and the twists and turns of empathy occasioned by the Terry Schiavo case These powerful individual and collective political events require new philosophical understanding **The Metaphysics of Laws of Nature** Walter Ott, 2022-06-23 It can seem obvious that we

live in a world governed by laws of nature yet it was not until the seventeenth century that the concept of a law came to the fore. Ever since it has been attended by controversy what does it mean to say that Boyle's law governs the expansion of a gas or that the planets obey the law of gravity? Laws are rules that permit calculations and predictions. What does the universe have to be like if it is to play by them? This book sorts the most prominent answers into three families. Laws first arose in a theological context: they govern events only because God enforces them. Those wishing to reverse the order of explanation and argue that the powers of objects fix the laws struggled to claim for themselves the results of new science. The standoff between these two families bred a third which rejects any kind of enforcer for the laws. On this view laws summarize events; they do not govern anything. This book traces the fortunes of the three families from their origins to the present day. It uses objections and the revisions needed to answer them to produce the best representative of each. Along the way it tries to settle the rules of this game: the debate over laws of nature. What should we expect from an account of laws? The book aims to help readers develop their own desiderata and judge the merits of the competing positions.

The Vegetal Turn Marcello Di Paola, 2024-12-17 This book charts the multidimensional course of what has come to be known as the Vegetal Turn in environmental humanities: a wave of theoretical and practical interest in the complexities and peculiarities of plant life and plant-human relations. The vegetal turn consists of increasingly sophisticated inter- and transdisciplinary inter- and trans-cultural explorations of the multiple systems and networks of communication, intelligence, technical/operational capabilities and relations articulated by and via plants, as well as the ethical, economic, cultural and political dimensions of plant-human interactions and practices. The volume includes contributions from philosophy and the humanities more generally that explore and reflect on the history, prospects and applications of four main themes that the Vegetal Turn has brought to general attention: the mind of plants and what their peculiar mentality can tell us about mind more generally; plant personhood and/or moral standing and the justifications and implications of attributions thereof; plant relationships with humans; plant-based human relationships and the ethics of human practices with or regarding plants, from agriculture to the arts, from forest management to urban design, as well as the rights and/or political representation of plant life and the other life forms that depend on it, human as well as non-human, present and future.

The Spirit of Creation Amos Yong, 2011-05-17 Is a pentecostal charismatic worldview defensible in light of contemporary science? In *The Spirit of Creation* Amos Yong demonstrates that pentecostal thought does indeed have merit in scientific contexts. What's more, he argues that pentecostal charismatic views regarding the dynamic presence and activity of the Spirit of God and the pluralistic cosmology of many spirits have something important to add to the broad discussion now taking place at the crossroads of science and religion. Interacting with many scientific fields of study, including psychology, sociology, evolutionary science, cosmology and more, Yong's *Spirit of Creation* demonstrates the significance of pentecostal ideas to the ongoing dialogue between theology and science.

Schelling-Eschenmayer Controversy, 1801 Benjamin Berger, 2020-03-18 Berger and Whistler provide a

ground breaking account of Schelling's first controversy with his critic A C A Eschenmayer in 1801 which focused on the philosophy of nature They argue that key Schellingian concepts such as identity potency and abstraction were first forged in his early debate with Eschenmayer

Paleolithic Politics Barry Cooper, 2020-04-30 Using his background in political theory and philosophical anthropology Barry Cooper is the first political scientist to propose new interpretations of some of the most famous extant Paleolithic art and artifacts in Paleolithic Politics This book is inspired by Eric Voegelin one of the major political scientists of the last century who developed an interest in the very early symbolism associated with the caves and rock shelters of the Upper Paleolithic but never finished his analysis Cooper who has written extensively on Voegelin's theories takes up the enterprise of applying Voegelin's approach to an analysis of portable and cave art He specifically applies Voegelin's philosophy of consciousness his concept of the compactness and differentiation of consciousness his argument regarding the experience and symbolizations of reality and his notion of the primary experience of the cosmos to images previously regarded as pedestrian Cooper demonstrates the political significance of the earliest expressions of human existence and is among the first to argue that political life began not with the Greeks but 25 000 years before them Archaeologists prehistorians and political scientists will all benefit from this original and provocative work

Challenging the Modern Synthesis Philippe Huneman, Denis M. Walsh, 2017-08-17 Since its origin in the early 20th century the Modern Synthesis theory of evolution has grown to become the orthodox view on the process of organic evolution Its central defining feature is the prominence it accords to genes in the explanation of evolutionary dynamics Since the advent of the 21st century however the Modern Synthesis has been subject to repeated and sustained challenges These are largely empirically driven In the last two decades evolutionary biology has witnessed unprecedented growth in the understanding of those processes that underwrite the development of organisms and the inheritance of characters The empirical advances usher in challenges to the conceptual foundations of evolutionary theory The extent to which the new biology challenges the Modern Synthesis has been the subject of lively debate Many current commentators charge that the new biology of the 21st century calls for a revision extension or wholesale rejection of the Modern Synthesis Theory of evolution Defenders of the Modern Synthesis maintain that the theory can accommodate the exciting new advances in biology The original essays collected in this volume survey the various challenges to the Modern Synthesis arising from the new biology of the 21st century The authors are evolutionary biologists philosophers of science and historians of biology from Europe and North America Each of the essays discusses a particular challenge to the Modern Synthesis treatment of inheritance development or adaptation Taken together the essays cover a spectrum of views from those that contend that the Modern Synthesis can rise to the challenges of the new biology with little or no revision required to those that call for the abandonment of the Modern Synthesis The collection will be of interest to researchers and students in evolutionary biology and the philosophy and history of the biological sciences

Modern Religion, Modern Race Theodore Vial, 2016-06-16 Religion is a racialized category even

when race is not explicitly mentioned Modern Religion Modern Race argues that because the concepts of religion and race are rooted in the post Enlightenment project of rethinking what it means to be human we cannot simply will ourselves to stop using these categories Only by acknowledging that religion is already racialized can we begin to understand how the two concepts are intertwined and how they operate in our modern world

Complexity Melanie Mitchell, 2009-04-01 What enables individually simple insects like ants to act with such precision and purpose as a group How do trillions of neurons produce something as extraordinarily complex as consciousness In this remarkably clear and companionable book leading complex systems scientist Melanie Mitchell provides an intimate tour of the sciences of complexity a broad set of efforts that seek to explain how large scale complex organized and adaptive behavior can emerge from simple interactions among myriad individuals Based on her work at the Santa Fe Institute and drawing on its interdisciplinary strategies Mitchell brings clarity to the workings of complexity across a broad range of biological technological and social phenomena seeking out the general principles or laws that apply to all of them Richly illustrated Complexity A Guided Tour winner of the 2010 Phi Beta Kappa Book Award in Science offers a wide ranging overview of the ideas underlying complex systems science the current research at the forefront of this field and the prospects for its contribution to solving some of the most important scientific questions of our time

Victorian Animal Dreams Deborah Denenholz Morse, Martin A. Danahay, 2017-05-15 The Victorian period witnessed the beginning of a debate on the status of animals that continues today This volume explicitly acknowledges the way twenty first century deliberations about animal rights and the fact of past and prospective animal extinction haunt the discussion of the Victorians obsession with animals Combining close attention to historical detail with a sophisticated analytical framework the contributors examine the various forms of human dominion over animals including imaginative possession of animals in the realms of fiction performance and the visual arts as well as physical control as manifest in hunting killing vivisection and zookeeping The diverse range of topics analyzed from a contemporary perspective makes the volume a significant contribution to Victorian studies The conclusion by Harriet Ritvo the pre eminent authority in the field of Victorian animal studies provides valuable insight into the burgeoning field of animal studies and points toward future studies of animals in the Victorian period

Plant Minds Chauncey Maher, 2017-06-26 The idea that plants have minds can sound improbable but some widely respected contemporary scientists and philosophers find it plausible It turns out to be rather tricky to vindicate the presumption that plants do not have minds for doing so requires getting clear about what plants can do and what exactly a mind is By connecting the most compelling empirical work on plant behavior with philosophical reflection on the concept of minds Plant Minds aims to help non experts begin to think clearly about whether plants have minds Relying on current consensus ideas about minds and plants Chauncey Maher first presents the best case for thinking that plants do not have minds Along the way however he unearths an idea at the root of that case the idea that having a mind requires the capacity to represent the world In the last chapter he defends a relatively new and insightful theory of mind that

rejects that assumption making room for the possibility that plants do have minds primarily because they are alive
