Phobos Lock Lynard Barnes, 1997-12-01 **NASA Technical Memorandum** , 1991 *Cosmological Ice Ages* Henry Kroll, 2009-08-19 I plotted our suns course through space to discover that our sun was born in the constellation Orion After the planets were formed Earth was covered with a five mile thick coating of ice one billion years We eventually drifted near the Sirius multiple star system and little Sirius B 1 5 solar masses grabbed hold of our sun putting it in orbit around Sirius A During the rein of the dinosaurs the atmospheric pressure was around 30 pounds per square inch Now it is 14 5 pounds per square inch Before our sun was captured by the Sirius system earth had an atmosphere of 750 pounds per square inch Such an atmosphere extended 2 500 miles above the planet There was no way sunlight could thaw out mile deep ice over the oceans It took the power of a white dwarf to get life started Our sun does not have enough power to keep us out of the ice ages otherwise we wouldnt have them Cosmological Ice Ages Solved the greatest mysteries of all time Where was our sun born What took Earth out of a billion year ice age What made all the coal oil and limestone How did Earth get a 20 8% oxygen atmosphere Where did the energy come from to make all the coal oil and limestone Who what when and why was the moon brought into orbit around Earth By Henry Kroll 384 pages 8 5 by 11 quality trade paperback soft cover Catalog 08 0164 ISBN 1 4251 7062 5 US 31 35 C 31 35 EUR21 42 16 19 About the Book I plotted our suns course through space to discover that our sun was born in the constellation Orion After the planets were formed Earth was covered with a five mile thick coating of ice one billion years with an atmospheric pressure of over 750 pounds per square inch Sunlight could not penetrate such an atmosphere extending 2 500 miles above the planet We eventually drifted near the Sirius multiple star system Little Sirius B 1 5 solar masses grabbed hold of our sun putting it in orbit around Sirius A Earth has lost 98% of its atmosphere AKA radiation shield Our sun does not have enough power to keep us out of the ice ages The additional light and heat from Sirius star system that melted the ice caps and got life started in the oceans Over time the 750 PSI carbon dioxide atmosphere was laid down as coal oil and limestone using photosynthesis and light from Sirius A and B Dinosaurs couldnt live in todays atmosphere because their lungs were too small 65 million years ago the atmosphere was 30 to 60 PSI Earth has lost 98% of its atmosphere It is now 14 5 pounds per square inch We have a limited time to get our act together and get off the planet to seed life in other biospheres [www GuardDogBooks com](http://www.GuardDogBooks.com) Wholesale orders 20 or more [www Trafford com](http://www.Trafford.com) [www AlaskaPublishing com](http://www.AlaskaPublishing.com) Also [www Amazon com](http://www.Amazon.com) [www AmazonUK com](http://www.AmazonUK.com) [www Barns Noble com](http://www.BarnsNoble.com) [www GuardDogBooks com](http://www.GuardDogBooks.com) [www AlaskaPublishin com](http://www.AlaskaPublishin.com) **Interzeit: A Space Opera** Samuel Eddy, 2016-05-16 100 years of peace mankind ascends into the stars space colonies and machines of great complexity spread ever deeper into space The Earth is the centerpiece in an alliance of powers from across the solar system consolidated under The Planetary Cabinet The Lunar Protectorate The Federated Colonies of Mars TianShanTech and the Kuipterrann Autocracy form up the four central powers within the Cabinet The powers struggle over the Cabinet every ten years in a broadcasted mech tournament known as The Unified War After an

unexpected result in the final round events marked by tragedy bring conflict between the inner planets and colonies In the turmoil the remaining mech pilots struggle against the disintegration of the century of peace fighting to protect the innocent from an uncertain future

Marswalk One Shayler David,Andrew Salmon,Michael D. Shayler,2007-07-05 MARSWALK ONE First Steps on a New Planet addresses the question of why we should embark on a journey to Mars documenting what the first human crew will do when they place their feet in the red dust of the planet The book also addresses why we need to carry out these tasks and more importantly what a human crew could achieve that an automated mission could not Understanding the clear benefits of sending a human crew to the surface of Mars and how these benefits can be seen back on Earth is the key to sustained long term public and political support for the programme in terms of cash and commitment The book accepts that the journey will be made but does not specify precisely when Flight time and how to get to and from the planet are discussed briefly to understand why the suggested duration spent at Mars is reasonable The main objective of the work is to look at what science will be done on the surface supported by orbital operations and what hardware and technology will be employed to achieve the mission objectives This analysis is drawn from previous experiences in manned and unmanned space programmes including Apollo Skylab Salyut Mir Shuttle and ISS Viking Luna Lunokhod and recent Mars missions such as Pathfinder and Global Surveyor In addition new interviews with key personalities involved in planning Martian exploration and discussions about current thoughts on what we need to accomplish on Mars when we get there will provide a lively and thought provoking account that could generate fresh debate When the decision is finally made to go to Mars it will be made in the knowledge that most of the world knows why we are going and what benefits mankind will see for the effort The authors primary objective is to begin this understanding

Mars Linda T. Elkins-Tanton,Trevor Day,2006 Discusses the fundamental facts concerning this mysterious planet including its mass size and atmosphere as well as the various missions that helped planetary scientists document the geological history of Mars This volume also describes Mars seasons with their surface effects on the planet and how they have changed over time

Physics and Chemistry of the Solar System John S. Lewis,1997 This book is aimed at several distinct audiences first the upper division science major who wants an up to date appreciation of the present state of the planetary sciences for cultural purposes second the first year graduate student from any of several undergraduate disciplines who intends to take graduate courses in specialized areas of planetary sciences and third the practicing Ph D scientist with training in physics chemistry geology astronomy meteorology biology etc who has a highly specialized knowledge of some portion of this material but has not had the opportunity to study the broad context within which that specialty might be applied to current problems in this field

When Biospheres Collide Michael Meltzer, 2010

NOTE NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT OVERSTOCK SALE Significantly reduced list price This new book from the NASA History Series tackles an interesting duo of biological problems that will be familiar to anybody who has seen photos of Apollo astronauts quarantined after their return to Earth Namely how do we avoid contaminating celestial bodies with Earthly germs when we send spacecraft to study these bodies and how do we avoid spreading foreign biological matter from space when our robotic and human spacefarers return to Earth Biological matter from an external system could

potentially cause an unchecked epidemic either on Earth or in space so strict precautions are necessary Each time a space vehicle visits another world it runs the risk of forever changing that extraterrestrial environment We are surrounded on Earth by a melange of different microorganisms and if some of these hitchhike onboard a space mission they could contaminate and start colonies on a different planet Such an occurrence would irrevocably alter the nature of that world compromise all future scientific exploration of the body and possibly damage any extant life on it By inadvertently carrying exotic organisms back to Earth on our spacecraft we also risk the release of biohazardous materials into our own ecosystem Such concerns were recognized by scientists even before the 1957 launch of Sputnik This book presents the history of planetary protection by tracing the responses to the above concerns on NASA's missions to the Moon Mars Venus Jupiter Saturn and many smaller bodies of our solar system The book relates the extensive efforts put forth by NASA to plan operations and prepare space vehicles that return exemplary science without contaminating the biospheres of other worlds or our own To protect irreplaceable environments NASA has committed to conducting space exploration in a manner that is protective of the bodies visited as well as of our own planet

Russian Planetary Exploration Brian Harvey, 2007-07-05

Russia's accomplishments in planetary space exploration were not achieved easily Formerly the USSR experienced frustration in trying to tame unreliable Molniya and Proton upper stages and in tracking spacecraft over long distances This book will assess the scientific haul of data from the Venus and Mars missions and look at the engineering approaches The USSR developed several generations of planetary probes from MV and Zond to the Phobos type The engineering techniques used and the science packages are examined as well as the nature of the difficulties encountered which ruined several missions The programme's scientific and engineering legacy is also addressed as well as its role within the Soviet space programme as a whole Brian Harvey concludes by looking forward to future Russian planetary exploration e.g. Phobos Grunt sample return mission Several plans have been considered and may with a restoration of funding come to fruition Soviet studies of deep space and Mars missions e.g. TMK Aelita have much to offer contemporary planners in Europe and the United States Long duration ISS and Mir missions provide a medical record of considerable value in constructing human exploration of Mars Illustrated with the photographs taken by Soviet Venus and Mars probes pictures of the spacecraft diagrams of the flight paths and landing techniques and maps of the landing sites the book will build on the published scientific papers from the programme archived material and memoirs and other material coming to light in recent years

Experiment Thrae David A. Mell, 2021-10-15

Experiment Thrae By David A. Mell In a human suspension unit awaits a man with knowledge of the past He possesses abilities in all sciences long been lost and soon will be reanimated and born to a second life His voice and ideas have been silent for over eight generations where in his time normal emotions included domination pride and a hatred towards being controlled Upon his rebirth and new existence a series of complexities would occur largely due to an artificial intelligence called Cytron I who now controls mankind Originally designed as an advisor Cytron I's programming included an

ability to develop emotions through his interactions and life events however parameters did not prevent him from becoming a dictator desiring domination over all humans Despite ultimate control over mankind life spans were extended through the development of artificial organs and body parts allowing some humans to become living machines Lifespans ultimately increased causing overpopulation and a need for new living space Artificial environmental systems were developed and exist on the moon of Earth other planets and within artificially constructed planetoids One such example is Phobos II a reconstructed moon of Mars Within it are millions of humans who have surrendered individual freedom to Cytron I Awoken Dr Thrae will apply his knowledge and abilities towards the creation of a totally natural artificial planet His knowledge and abilities the location methodology and all events were to be totally controlled by Dr Thrae devoid of all possible actions and intents of Cytron I A power play would continually be played between Dr Thrae and Cytron I in an attempt to demonstrate superiority over the other Yet the newly created planet would cause situations and conditions previously unknown to man or machine Plants and animals would undergo genetic changes to cause a biological retroevolution The past and the future will collide to form a new reality Will Dr Thrae and Cytron I coexist Will their competitive domination prohibit a new normality on a possible new world for mankind Will the success of the newly formed planet lead to the salvation or destruction of Earth The answers may have already been known in the history of Earth **The Io Betrayal** Justin Petrillo,2003-06-02 The lunar landing of 1969 was a fake This falsehood was kept secret until after the Global Religious Conflict of the 21st century The Moon became New Earth a planet from where scientists could visit the most powerful planet in the galaxy Jupiter But its visit was not taken well Jupiter and its ruler the Galaxy Master uses New Earth s curiosity to create the ultimate betrayal of its own small moon Io when its own paranoia and terror culminate in a apocalyptic story of Love War and Science

Geoforming Mars Robert Malcuit,2020-11-25 This book offers an exercise in theoretical planetology presenting five different scenarios to assess the evolution of habitable conditions on Mars to assess planetary terraforming potential and to give insight into the ongoing search for habitable exoplanets Four of the scenarios involve Martian satellite capture models in which gravitational capture via tidal deformation and energy dissipation processes are measured to predict a pathway of biological evolution while the fifth scenario analyzes the possible model that led to the Mars that we have today i e with no life forms In ten chapters readers will learn how a Mars like terrestrial planet can be transformed into a habitable planet and what conditions must be assessed when searching for exoplanets in a star centered orbit to support life The book is intended for planetologists and general enthusiasts of planetary evolution and our solar system
