Managing and consequences of physician to patient ratio in health care organizations Kim Wong,2014-10-27 Master s Thesis from the year 2012 in the subject Health Public Health grade 2 5 University of Cologne language English abstract Imbalance between demand for and supply of physicians is an issue regularly addressed by the media researchers and policy makers It has been widely spread in many countries for years Healthcare organizations in both of developed and developing countries have all experienced from that Physician to patient ratio is one of the important normative population based indicators to measure this imbalance It equals to the entire number of physicians in a healthcare organization dividing its patient volume within a certain period e g a year The quotient is often standardized in form of X number of physicians per 1 000 patients or in form of 1 X in order to express the amount of patients X that under one physician s management clearly In comparison with other measurements this kind of indicators are less complicated and easier to comprehend An imbalance between physician demand and supply in a healthcare organization could be explicitly identified and quantified by comparing its actual physician to patient ratio with a gold standard Unfortunately a wide range suitable gold standard of physician to patient ratio does not exist Therefore healthcare organizations must make great efforts to find their own gold standards The physician to patient ratio could be easily confounded with the patient to physician ratio which represents the number of physicians who oversee one patient within his or her entire hospital stay In an ideal model for patient care is 1 1 the target patient to physician ratio to aim at But in reality this ratio is not easy to realize In this paper merely the physician to patient ratio is under discussion Imbalance between demand for and supply of physicians could bring inappropriate physician to patient ratio to healthcare organizations It is one of the major threats to healthcare organizations as it might have consequences such as lower quality of healthcare services closure of hospital s ward increasing wait time reducing number of staff beds under utilization of physicians or higher medical costs Managing the physician to patient ratio is not only a key to predict these risks but also the hope for turning the imbalance situations into balance ones
