materials scientists and device engineers in modern industry      Optical Parametric Generation and Amplification Jing-Yuan Zhang, 2019-01-22 This volume considers optical parametric generation and amplification OPG OPA as a means for producing a tunable optical parametric device It reviews the OPA OPG systems using various crystals pumped by lasers at various frequencies with pulse duration ranging from picoseconds to femtoseconds Part two covers the theoretical background for design of an OPA OPG system using two newly discovered nonlinear crystals Experimental design considerations are discussed in section three including the section of nonlinear crystals pumping sources and optical configurations In section four the experimental results obtained are compared with the theoretical calculations      **Principles and Applications of Nonlinear Optical Materials** R.W. Munn, C.N. Ironside, 2012-12-06 Nonlinear optics is a topic of much current interest that exhibits a great diversity Some publications on the subject are clearly physics while others reveal an engineering bias some appear to be accessible to the chemist while others may appeal to biological understanding Yet all purport to be non linear optics so where is the underlying unity The answer is that the unity lies in the phenomena and the devices that exploit them while the diversity lies in the materials used to express the phenomena This book is an attempt to show this unity in diversity by bringing together contributions covering an unusually wide range of materials preceded by accounts of the main phenomena and important devices Because of the diversity individual materials are treated in separate chapters by different expert authors while as editors we have shouldered the task of providing the unifying initial chapters Most main classes of nonlinear optical solids are treated semiconductors glasses ferroelectrics molecular crystals polymers and Langmuir Blodgett films However liquid crystals are not covered Each class of material is enough for a monograph in itself and this book is designed to be an introduction suitable for graduate students and those in industry entering the area of nonlinear optics It is also suitable in parts for final year undergraduates on project work It aims to provide a bridge between traditional fields of expertise and the broader field of nonlinear optics      **Lasers** Charles Blain, 2002 Developments in lasers continue to enable progress in many areas such as eye surgery the recording industry and dozens of others This book presents citations from the book literature for the last 25 years and groups them for ease of access which is also provided by subject author and titles indexes      **Advances In Laser Physics** V S Letokhov, Pierre Meystre, 2000-07-06 The birth of quantum electronics in the middle of the 20th century and the subsequent discovery of the laser led to new trends in physics and a number of photonic technologies This volume is dedicated to Peter Franken a pioneer of nonlinear optics and includes papers by the founders of quantum electronics Aleksandr Prokhorov Nicolaas Blombergen      **Electrooptics** Jose Manuel Cabrera, Fernando Agullo-Rueda, 2012-12-02 This comprehensive text provides an understanding of the physical phenomenon behind electrooptics It describes in detail modern electrooptic materials and operative physical mechanisms and devotes a full chapter to the new materials engineering that is contributing to the development of low dimensional systems The book also reviews device applications in both bulk and waveguide technologies Provides extensive coverage in a self contained

**Nonlinear Photonic Crystals** Richart E. Slusher,Benjamin J. Eggleton,2013-06-29 Nonlinear optical studies of periodic dielectric structures have blossomed in the past two decades New fabrication techniques are producing fiber grating and multidimensional photonic crystals in materials where the refractive index can be varied by light pulses and beams Gap solitons that can propagate at any velocity from zero to the speed of light and spatial solitons that prevent the diffractive spread of light in waveguide arrays are two examples of the new phenomena described in this book

Microstructured optical fibers allow control of the guided mode dispersion for broadband light generation and new soliton phenomena. Many new materials and structures are being developed that will impact new optical devices with applications in optical communications and optical data processing. All the above topics are addressed in detail in this book. *Nonlinear Optical Materials for All-Optical Switching Applications* Rajesh Sharma, 2025-06-24. This book highlights the background and fundamentals of nonlinear optical materials in relation to all optical switching applications. It explains major aspects of nonlinear refractive index and the nonlinear absorption phenomena which are essential to decide the figure of merit of various materials for the all optical switching. Autocorrelation technique, frequency resolved optical gating, spectral phase interferometry for direct electric field reconstruction, grating eliminated no nonsense observation of ultrafast incident laser light, electric fields are discussed to measure the temporal and spectral profiles of the ultrafast pulsed lasers. Advanced nonlinear optical characterization methods such as single and dual arm Z scan, pump probe and beam deflection techniques are also discussed at length. The transmission signal obtained in the majority of the nonlinear optical effects is found to be weak which creates hiccups to obtain faster switching speeds. Various solutions are discussed to overcome these existing limitations of the all optical switching based devices. Optical nonlinearities in semiconductors, organic molecules and challenges in all optical switching devices are also addressed in the book.
