*Razmyshli o Reforme Energeticheskogo Sektora* Julian A. Lampietti,2004 One of the harsher realities of independence for the former Soviet republics has been the loss of subsidized transfers from the center for fuel and utilities In the years since independence Georgians with other energy poor republics have been subject to higher costs and declining service levels for household utilities particularly energy The combination of low household incomes high international prices for fuel the need for utilities to rely on internally generated funds for capital investment low household incomes and the political ramifications of removing subsidies at a time of general economic decline have led to a worst of all worlds situation Revisiting Reforms reviews the changes in the supply of electricity and gas in Georgia from the perspective of households utility operators and the government It highlights lessons from the reforms implemented and applies them to the future reform program planned for the rest of the energy sector The title concludes that improved service quality and the increased supply of clean and subsidized natural gas have offset the potentially negative impact of higher electricity prices

**The Distributional Incidence of Residential Water and Electricity Subsidies** ,2006 Subsidies to residential utility customers are popular among policymakers utility managers and utility customers alike but they are nonetheless the subject of much controversy Utility subsidies are seen as a way to help make utility service affordable for poor households and as an alternative mechanism for income redistribution These arguments in favor of

subsidies are countered by serious concerns about their adverse effects on consumer behavior utility operations and the financial health of utilities Both the affordability and redistributive arguments for subsidies are based on the presumption that poor households benefit disproportionately from water and electricity subsidies that they are well targeted to the poor The authors test this assumption by examining the extent to which the poor benefit from consumption and connection subsidies for water and electricity services Their analysis of a wide range of subsidy models from around the developing world shows that the most common form of utility subsidy quantity based subsidies delivered through the tariff structure are highly regressive Geographically targeted or means tested subsidies do better and in many cases have a progressive incidence but large numbers of poor households remain excluded Low levels of coverage and metering severely limit the effectiveness of consumption subsidy schemes to reach the poor Simulations suggest that connection subsidies are an attractive alternative for low coverage areas but only if utilities have the means and motivation to extend network access to poor households and only if those households choose to connect World Bank web site

*Conditionality Revisited* Stefan Koeberle, 2005-01-01 Annotation This book brings together different perspectives on the role of conditionality drawing on the experiences and lessons learned by the donor community NGO critics and academic circles and the borrowing countries and provides a board overview of contemporary approaches to conditionality in today s aid architecture

**Water, Electricity, and the Poor** Kristin Komives, World Bank, 2005 This book reviews the prevalence and variants of consumer subsidies found in the developing world and the effectiveness of these subsidies for the poor It places consumer subsidies in a broader social protection framework and compares them with poverty focused programmes in other sectors using a common metric It concludes that the most common subsidy instruments perform poorly in comparison with most other transfer mechanisms Alternative consumption and connection subsidy mechanisms show more promise especially when combined with complementary non price approaches to making utility services accessible and affordable to poor households The many factors contributing to those outcomes are dissected identifying those that can be controlled and used to improve performance

The World Bank Research Program 2004 World Bank, 2005 The World Bank s research is intended to address critical issues and problems facing member governments in developing and transition economies How can the governments of the poorest countries generate enough revenue to provide the education and health services essential to reducing poverty and promoting growth and development How can poor countries attract investors to build the

infrastructure their economies need How can they develop systems to bring clean water to the 2 billion people without it today How can they train teachers and bring to class the 115 million children who have not yet received any education And how can rich countries be persuaded to lower market barriers helping to reverse the decline in export prices for poor countries that has left them earning less from trade today than in the 1970s These are the types of questions that are addressed in this edition of The World Bank Research Program Abstracts from Current Studies This volume reports on research projects initiated under way or completed from July 2003 through June 2004 It covers 151 research projects on several broad development related issues including agriculture health education environment infrastructure investment climate and more The abstract for each project describes the questions addressed the analytic methods used the findings to date and policy implications

*People and Power* Julian A. Lampietti, Sudeshna Ghosh Banerjee, Amelia Branczik, 2007 Empirical insights on household behavior and electricity consumption patterns in this book reveal that in Europe and Central Asia the erosion of tariff based subsidies has disproportionately affected the poor while direct transfers through social benefit systems have often been inadequately targeted The book suggests alternative strategies for achieving cost recovery in the electricity sector in a socially and politically acceptable manner providing lessons that are equally relevant for other utilities and regions

*Civil Society Revisited* Kerstin Jacobsson, Elżbieta Korolczuk, 2017-06-01 In much social scientific literature Polish civil society has been portrayed as weak and passive This volume offers a much needed corrective challenging this characterization on both theoretical and empirical grounds and suggesting new ways of conceptualizing civil society to better account for events on the ground as well as global trends such as neoliberalism migration and the renewal of nationalist ideologies Focusing on forms of collective action that researchers have tended to overlook the studies gathered here show how public discourse legitimizes certain claims and political actions

as true civil society while others are too often dismissed Taken together they critique a model of civil society that is made from above
