Love, Desire and Identity in the Theatre of Federico García Lorca Paul McDermid,2007 Physical desire and metaphysical love in the theatre of Federico Garc a Lorca A dialectical tension between physical desire and metaphysical love lies at the heart of the theatre works of Federico Garc a Lorca and the deployment of queer theory s critique of gender and identity is surprisingly effective inthis discussion of love versus desire Seldom is enough attention paid to the poet s early works and so this book offers a timely review of the religious tragedy Cristo as well as Mariana Pineda uncoveringin these early offerings an explicit proposal of the supremacy of love over desire A meditation on the fragmentary and challenging El p blico yields a vivid panorama of identity in crisis and a paradigmatic Lorcan sacrifice of self for love The ostensibly more conventional tragedies of Amor de Don Perlimpl n con Belisa en su jard n and Yerma are also reassessed in terms of self sacrifice and self love The study concludes with an argument for a practical re reading of La casa de Bernarda Alba which emphasises how the play might be saved from po faced realism with music humour and drag performance PAUL McDERMID lectures in Spanish at Queen s University Belfast

The Cultivator & Country Gentleman ,1878 **Scientific Modeling and Simulations** Sidney Yip,Tomas Diaz Rubia,2010-04-07 Although computational modeling and simulation of material deformation was initiated with the study of structurally simple materials and inert environments there is an increasing demand for predictive simulation of more realistic material structure and physical conditions In particular it is recognized that applied mechanical force can plausibly alter chemical reactions inside materials or at material interfaces though the fundamental reasons for this chemomechanical coupling are studied in a material specific manner Atomistic level simulations can provide insight into the unit processes that facilitate kinetic reactions within complex materials but the typical nanosecond timescales of such simulations are in contrast to the second scale to hour scale timescales of experimentally accessible or technologically relevant timescales Further in complex materials these key unit processes are rare events due to the high energy barriers associated with those processes Examples of such rare events include unbinding between two proteins that tether biological cells to extracellular materials 1 unfolding of complex polymers stiffness and bond breaking in amorphous glasses and gels 2 and diffusive hops of point defects within crystalline alloys 3 Webster's New International Dictionary of the English Language Noah Webster,1913
