Natural Neuroscience Nachum Ulanovsky, 2025-04-15 A new approach to brain research that emphasizes studying the brain under naturalistic conditions Natural neuroscience departs from the classical reductionist approach which emphasizes control at the expense of natural behaviors by proposing a shift toward real world relevance natural behaviors and ecological validity In Natural Neuroscience Nachum Ulanovsky presents the conceptual empirical and technological underpinnings that enabled this new field Natural neuroscience researchers posit that when studying any brain region in any animal whether standard mammalian species such as rodents and primates or nonstandard species it is crucial to pursue the animal's natural behaviors and to consider the natural problems it needs to solve By preventing rich natural behaviors says Ulanovsky we miss key aspects of brain function and we may not even know what we miss The author surveys recent studies that have begun to move in this direction across multiple subfields of neuroscience including sensory cognitive social and behavioral neuroscience He discusses technological advances that are allowing the pursuit of more naturalistic experiments including methods for recording neural activity in freely behaving freely moving animals e.g. wired and wireless electrophysiology and imaging methods for manipulating neural activity in freely moving animals e.g. wired and wireless optogenetics and methods for quantifying the details of behavior He makes connections across the four major scientific disciplines that focus on understanding behavior neuroscience behavioral ecology ethology and psychology bringing them closer together and closer to real life

Novel Applications of Bayesian and Other Models in Translational Neuroscience Reza Rastmanesh, Jacob Raber, Edward W. Hsu, Benjamin R. Pittman-Polletta, 2024-05-06 It has been proposed that the brain works in a Bayesian manner and based on the free energy principle the brain's main function is to reduce environmental uncertainty this is a proposed model as a universal principle governing adaptive brain function and structure There are many pathophysiological and clinical observations that can be easily explained by predictive Bayesian brain models However the novel applications of Bayesian models in translational neuroscience has been understudied and underreported For example variational Bayesian mixed effects inference has been successfully tested for classification studies A multi-task Bayesian compressive sensing approach to simultaneously estimate the full posterior of the CSA ODF and diffusion weighted volumes from multi-shell HARDI acquisitions has been recently published
