Hintikka,2012-12-06 It is gratifying to see that philosophers continued interest in Words and Objections has been so strong as to motivate a paperback edition This is gratifying because it vindicates the editors belief in the permanent importance of Quine's philosophy and in the value of the papers commenting on it which were collected in our volume Apart from a couple of small corrections only one change has been made The list of Professor Quine's writings has been brought up to date The editors cannot claim any credit for this improvement however We have not tried to imitate the Library of Living Philosophers volumes and to include Professor Quine's autobiography in this volume but we are fortunate to publish here his brand new auto bibliography 1975 THE EDITORS TABLE OF CONTENTS V PREFACE 1 EDITORIAL INTRODUCTION 1 1 C SMART Quine's Philosophy of Science 3 GILBERT HARMAN An Introduction to Translation and Meaning Chapter Two of Word and Object 14 ERIK STENIUS Beginning with Ordinary Things 27 NOAM CHOMSKY Quine's Empirical Assumptions 53 1AAKKO HINTIKKA Behavioral Criteria of Radical Translation 69 BARRY STROUD Conventionalism and the Indeterminacy of Translation 82 P F STRAUSSON Singular Terms and Predication 97 118 H P GRICE Vacuous Names P T

Lewis** David K. Lewis, 2020-10-29 David Kellogg Lewis 1941 2001 was one of the most influential philosophers of the twentieth century He made significant contributions to almost every area of analytic philosophy including metaphysics philosophy of language philosophy of mind and philosophy of science and set the agenda for various debates in these areas which carry on to this day In several respects he remains a contemporary figure yet enough time has now passed for historians of philosophy to begin to study his place in twentieth century thought His philosophy was constructed and refined not just through his published writing but also crucially through his life long correspondence with fellow philosophers including leading figures such as D M Armstrong Saul Kripke W V Quine J J C Smart and Peter van Inwagen His letters formed the undercurrent of his published work and became the medium through which he proposed many of his well known theories and discussed a range of philosophical topics in depth A selection of his vast correspondence over a 40 year period is presented here across two volumes As metaphysics is arguably where Lewis made his greatest contribution this forms the focus of Volume 1 Arranged under the broad areas of Causation Modality and Ontology the letters offer an organic story of the origins development breadth and depth of his metaphysics in its historical context as well as a glimpse into the influence of his many interlocutors This volume will be an indispensable resource for contemporary metaphysics and for those interested in the Lewisian perspective *Andrzej Mostowski and Foundational Studies* A. Ehrenfeucht, Andrzej Ehrenfeucht, V.W. Marek, M. Srebrny, 2008-03-06 Andrzej Mostowski was one of the leading 20th century logicians His legacy is examined in this volume

of papers devoted both to his extraordinary scientific heritage and to the memory of him as a great researcher teacher organizer of science and human Professor Mostowski pioneered and mastered many areas of mathematical logic His contributions spanned set theory recursion theory and model theory the backbone of foundations of mathematics He is best known of the Kleene Mostowski and Davis Mostowski hierarchies of properties of integers reflecting the complexity of their definitions and of the very elegant concept of a generalized quantifier which inspired and keeps stimulating a stream of deep work on fundamental issues of logics deduction and reasoning both in mathematics and in computer science and also of the contributions and excellent lectures on undecidability unprovability consistency and independence of various statements in set theory and arithmetic following G del Tarski and Cohen The overall content of the volume is designed to cover the current main streams in the field For many years after WWII especially in the late sixties till his untimely death in 1975 Warsaw where he led the centre of foundational studies was a place where many leading logicians visited studied and started their career Their memories form an important part of this volume attempting to bring back the extraordinary achievements and personality of Mostowski

Philosophy of Logics Susan Haack,1978-07-27 Publisher Description **Paradox and Paraconsistency** John Woods,2003 In a world plagued by disagreement and conflict one might expect that the exact sciences of logic and mathematics would provide a safe harbor In fact these disciplines are rife with internal divisions between different often incompatible systems Do these disagreements admit of resolution Can such resolution be achieved without disturbing assumptions that the theorems of logic and mathematics state objective truths about the real world In this original and historically rich book John Woods explores apparently intractable disagreements in logic and the foundations of mathematics and sets out conflict resolution strategies that evade or disarm these stalemates An important sub theme of the book is the extent to which pluralism in logic and the philosophy of mathematics undermines realist assumptions This book makes an important contribution to such areas of philosophy as logic philosophy of language and argumentation theory It will also be of interest to mathematicians and computer scientists *The Cambridge Companion to Quine* Roger F.

Gibson,2004-03-29 Publisher Description **Two Dogmas of Philosophy and Other Essays in the Philosophy of Philosophy** Dennis A. Rohatyn,1977 The major themes of this study are first that philosophy is not a technical enterprise or primarily a branch of knowledge but a way of life second that philosophy cannot be understood apart from its history and its history cannot be understood apart from the recognition that philosophy does designate a way of life **Cognitive**

Constraints on Communication L.M. Vaina,Jaakko Hintikka,2013-03-14 Communication is one of the most challenging human phenomena and the same is true of its paradigmatic verbal realization as a dialogue Not only is communication crucial for virtually all interpersonal relations dialogue is often seen as offering us also a paradigm for important intra individual processes The best known example is undoubtedly the idea of conceptualizing thinking as an internal dialogue inward dialogue carried on by the mind within itself without spoken sound as Plato called it in the Sophist At first the study of

communication seems to be too vaguely defined to have much promise. It is up to us so to speak to decide what to say and how to say it. However, on closer scrutiny the process of communication is seen to be subject to various subtle constraints. They are due inter alia to the nature of the parties of the communicative act and most importantly to the properties of the language or other method of representation presupposed in that particular act of communication. It is therefore not surprising that in the study of communication as a cognitive process the critical issues revolve around the nature of the representations and the nature of the computations that create, maintain and interpret these representations. The term representation as used here indicates a particular way of specifying information about a given subject. **One Hundred**

Twentieth-Century Philosophers Stuart Brown, Diane Collinson, Dr Robert Wilkinson, Robert Wilkinson, 2008-02-20. One Hundred Twentieth Century Philosophers offers biographical information and critical analysis of the life work and impact of some of the most significant figures in philosophy this century. Taken from the acclaimed Biographical Dictionary of Twentieth Century Philosophers the 100 entries are alphabetically organised from Adorno to Zhang Binglin and cover individuals from both continental and analytic philosophy. The entries have an identical four part structure making it easy to compare and contrast information comprising biographical details, a bibliography of major works, a listing of relevant secondary and critical literature, an appraisal of the philosopher's thoughts and achievements. A separate glossary provides an introduction to the origins, development and main features of major philosophical schools and movements and offers select bibliographies to guide the reader to further research. Oxford Studies in Metaphysics Volume 2 Dean Zimmerman, 2006-03-23. The second volume of a series that acts as a forum for new works in the field of metaphysics. The collection offers a broad overview of the subject and features traditional topics as well as questions from neighbouring fields such as the philosophies of mind and science.
