Dong, 1996-07-18 A unified presentation of engineering seismology and earthquake resistant design this book presents a wide ranging coverage of the whole subject of earthquake engineering so that the reader is given a clear appreciation of earthquakes before dealing with their effects on structures In addition newer mathematical modelling techniques are introduced

Computer Supported Cooperative Work in Design I Weiming Shen, Zongkai Lin, Jean-Paul A. Barthès, Tangqiu Li, 2005-11-04 The design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple commercial and non commercial engineering tools such as CAD tools modeling simulation and optimization software engineering databases and knowledge based systems Individuals or individual groups of multidisciplinary design teams usually work in parallel and separately with various engineering tools which are located on different sites often for quite a long time At any moment individual members may be working on different versions of a design or viewing the design from various perspectives at different levels of detail In order to meet these requirements it is necessary to have effective and efficient collaborative design environments These environments should not only automate individual tasks in the manner of traditional computer aided engineering tools but also enable individual members to share information collaborate and coordinate their activities within the context of a design project CSCW computer supported cooperative work in design is concerned with the development of such environments Nuclear Science Abstracts, 1967 *Space Structures 4* G. A. R. Parke, C. M. Howard, Mr. C. M. Howard, 1993 The diversity of

constructions included in this publication on space structures ranges from anten reflectors and masts positioned in space to equally exciting terrestrial structures notably large span domes barrel vaults multi layered grids cable and membrane systems and pneumatic structures This collection of more than two hundred and twenty papers presented in to volumes is the work of leading international experts for presentation at the Fourth International Conference on Space Structures These two volumes contain a prodigious amount of original and innovative information on space structures that will be of especial interest to engineers architects and other professionals engaged in the planning design fabrication and erection of novel constructions
