Selected Papers From The 1996 Telecommunications Policy Research Conference:

Interconnection and the Internet Gregory L. Rosston, David Waterman, 2013-11-26 The Telecommunications Act of 1996 and the Federal Communications Commission's Local Competition Order are just two examples of the continuing monumental and far reaching changes occurring throughout the telecommunications industry At the 1996 Telecommunications Policy Research Conference TPRC an annual forum for dialogue among scholars and the policymaking community on a wide range of telecommunications issues leading industry and academic researchers presented results of their research and insights in key areas of activity including interconnection and competition Internet growth and commerce Internet regulation and control and the political economy of telecommunications regulation The best of the 1996 TPRC papers are included here representing the forefront of research in the telecommunications industry The third in an annual LEA series of volumes based on this important conference this collection reflects the rapid economic technological and social development of telecommunications It also reflects the current state of research thinking on this issue and provides a foundation for further telecommunications policy analysis *Competition, Regulation, and Convergence* Sharon E. Gillett, Ingo Vogelsang, 1999-09-01 The telecommunications industry has experienced dynamic changes over the past several years and those exciting events and developments are reflected in the chapters of this volume The Telecommunications Policy Research Conference TPRC holds an unrivaled place at the center of national public policy discourse on issues in communications and information TPRC is one of the few places where multidisciplinary discussions take place as the norm The papers collected here represent the current state of research in telecommunication policy and are organized around four topics competition regulation universal service and convergence The contentious competition issues include bundling as a strategy in software competition combination bidding in spectrum auctions and anticompetitive behavior in the Internet Regulation takes up telephone number portability decentralized regulatory decision making versus central regulatory authority data protection restrictions to the flow of information over the Internet and failed Global Information Infrastructure initiatives Universal service addresses the persistent gap in telecommunications from a socioeconomic perspective the availability of competitive Internet access service and cost modeling The convergence section concentrates on the costs of Internet telephony versus circuit switched telephony the intertwined evolution of new services new technologies and new consumer equipment and the politically charged question of asymmetric regulation of Internet telephony and conventional telephone service The Electronic Grapevine Diane L. Borden, Kerric Harvey, 2013-11-05 The widespread use of the Internet as a tool for gathering and disseminating information raises serious questions for journalists and their readers about the process of reporting information Using virtual sources and publishing online is changing the way in which journalism takes place and its effect on the society it serves USE LAST THREE PARAGRAPHS ONLY FOR GENERAL CATALOGS The Electronic Grapevine explores the use of online media by reporters in the United States and examines the impact that usage

may have on how journalism is framed in the cultural sphere as well as how it is conducted in the professional one. It contains a mix of material examining how it feels to do online journalism, how it affects those who consume it, different ways that media scholars go about trying to understand it better, and the likely social and cultural impact of Internet-like technologies on the public at whom all this electronic information is eventually aimed. Drawing from the emerging scholarly work in the field and from the real-life experiences of working journalists, Borden and Harvey collect contributions that examine why journalists use the Internet, what changes it makes in how they approach their jobs, and what differences they see in conducting their daily newsgathering with this medium rather than other methods. The volume also analyses when and why journalists do not use online media and what the impact of the decision to use or not use the Internet may mean for the outer world whose perceptions of itself are so often shaped by journalistic portrait. This series of thought-provoking original essays explores the impact of computer-based information and communication services on traditional journalistic routines and practices and thereby addresses a critical gap in the scholarly literature on communication law and culture. Distinguishing between linkage devices like the Internet and database resources such as LEXIS, NEXIS, America Online, and others, this book examines the ways in which both types of online services may reshape and redefine not only the products of journalistic effort but the newsgathering process itself.

--And Communications for All Amit Schejter, 2009-01-01. In And Communications for All, 16 leading communications policy scholars present a comprehensive telecommunications policy agenda for the new federal administration. This agenda emphasizes the potential of information technologies to improve democratic discourse, social responsibility, and the quality of life, along with the means by which it can be made available to all Americans. Schejter has assembled an analysis of the reasons for the failure of the Telecommunications Act of 1996 and offers an international benchmark for the future of telecommunications. Addressing a range of topics including network neutrality, rural connectivity, media ownership, minority ownership, spectrum policy, universal broadband policy, and media for children, it articulates a comprehensive vision for the United States as a twenty-first century information society that is both internally inclusive and globally competitive.

Making Universal Service Policy Barbara A. Cherry, Steven S. Wildman, Allen S. Hammond, IV, Allen S. Hammond, 1999-08. This volume presents the current state of universal service policy from governmental, academic, and industry perspectives. It will be of great use to those involved in communication policy, including lawyers, economists, policy makers, and scholars.

The First 100 Feet Deborah Hurley, James H. Keller, 1999-07-06. The growth of the Internet has been propelled in significant part by user investment in infrastructure: computers, internal wiring, and the connection to the Internet provider. This bottom-up investment minimizes the investment burden facing providers. New technologies such as wireless and data transmission over power lines, as well as deregulation of telecommunications and electric utilities, will provide new opportunities for user investment in intelligent infrastructure as leverage points for Internet and broadband access. Recasting the problem of the last 100 feet as the opportunity of the first 100 feet, this book challenges

individuals businesses and policymakers to rethink fundamental issues in telecommunications policy The contributors look at options for Internet and broadband access from the perspective of homeowners apartment complexes and small businesses They evaluate the opportunities and obstacles for bottom up infrastructure development and the implications for traditional and alternative providers at the neighborhood regional and national levels Already some argue that Internet service will become the common denominator platform on which all other services can be carried A Publication of the Harvard Information Infrastructure Project

Liberalization and Regulation of the Telecommunications Sector in Transition

Countries Ekaterina Markova, 2008-11-14 Telecommunications are increasingly recognized as a key component in the infrastructure of economic development For many years there were state owned monopolies in the telecommunications sector In transition economies they were characterized by especially poor performance and high access deficits as telecommunications were considered to be a non profit oriented production process intended to support the socio economic superstructures As a result the starting point for the reform processes in transition countries was quite poor performed public monopolies functioned under completely different circumstances as the peers in the market economies The main question of this book is what the strategies for the successful future development of the telecommunications sector in transition countries are The special focus is on Russia the largest of the transition countries

Wireless Technology Prospects and Policy Options National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Wireless Technology Prospects and Policy Options, 2011-02-24 The use of radio frequency communication commonly referred to as wireless communication is becoming more pervasive as well as more economically and socially important Technological progress over many decades has enabled the deployment of several successive generations of cellular telephone technology which is now used by many billions of people worldwide the near universal addition of wireless local area networking to personal computers and a proliferation of actual and proposed uses of wireless communications The flood of new technologies applications and markets has also opened up opportunities for examining and adjusting the policy framework that currently governs the management and use of the spectrum and the institutions involved in it and models for allocating spectrum and charging for it have come under increasing scrutiny Yet even as many agree that further change to the policy framework is needed there is debate about precisely how the overall framework should be changed what trajectory its evolution should follow and how dramatic or rapid the change should be Many groups have opinions positions demands and desires related to these questions reflecting multiple commercial social and political agendas and a mix of technical economic and social perspectives The development of technologies and associated policy and regulatory regimes are often closely coupled an interplay apparent as early as the 1910s when spectrum policy emerged in response to the growth of radio communications As outlined in this report current and ongoing technological advances suggest the need for a careful reassessment of the assumptions that inform spectrum policy in the

United States today This book seeks to shine a spotlight on 21st century technology trends and to outline the implications of emerging technologies for spectrum management in ways that the committee hopes will be useful to those setting future spectrum policy

Internet Policy and Economics William H. Lehr, Lorenzo Maria Pupillo, 2009-06-04 For over a decade William Lehr Lorenzo Pupillo and their colleagues in academia industry and policy have been on the electronic frontier exploring the implications of the technologies that are revolutionizing communication and culture In 2002 Cyber Policy and Economics in an Internet Age featured essays that focused on such emerging economic and policy related issues of universal access appropriate content spectrum allocation taxation consumer protection and regulation with respect to the Internet In this fully revised and updated edition entitled Internet Policy and Economics Challenges and Perspectives the editors and contributors tackle the most current topics and issues as the Internet continues to permeate all facets of society New chapters cover dynamics in the developing world the implications of e commerce for fiscal policy and the impact of peer to peer networks on music and the arts as well as debates over intellectual property rights privacy issues and cybercrime Applying insights from economics political science law business and communications the book will serve as essential resource for researchers and students policymakers and regulators and industry analysts and practitioners

Market Platforms, Industrial Clusters and Small Business Dynamics Ke Ding, 2012-01-01. The emergence of specialized markets has profoundly improved the means of market access, enriched the driving forces of value chains and changed the business environment for small firms in the developing world. This ground-breaking book summarizes the experience of specialized markets in a systematic manner. Specialized markets are a unique product of China's economic transition. They are marketplaces located in industrial clusters specializing in the wholesale of local commodities and related goods. Ding Ke reveals that despite their seemingly primitive form, specialized markets appeared in many of the modern industrial sectors and were paradoxically upgraded and expanded as these clusters developed. He argues that specialized markets have also formed solid linkages with marketplaces in various cities in China and in other developing economies. A powerful emerging market-oriented distribution system has thus appeared. Based on thorough fieldwork covering ten years and using the novel theory of the platform, this book clarifies the unique development logic of specialized markets. Specialized markets have thoroughly changed the business environment for SMEs in developing countries and greatly enriched the general understanding concerning SME development. This book will prove invaluable for SME, Chinese economy and platform researchers. Management scientists and managers in multinational firms focusing on bottom of the pyramid markets will also find plenty of interesting information in this enlightening compendium.

Welfare Impacts of Spectrum Governance Regimes Yi-Feng Carol Ting, 2005. Innovation Policy and the Economy Adam B. Jaffe, Josh Lerner, Scott Stern, 2001. This series aims to provide a forum for research on the interactions between public policy and the innovation process. Discussions cover all policies that affect the ability of an economy to achieve scientific and technological progress or the impact of science and technology on economic growth.

The Network(ed) Economy Roman Beck, 2007-12-11. Modern communication channels together with new electronic media standards are constantly changing traditional interaction patterns of humans and even machines. In an increasingly globalized and networked world, such a communication-based interaction is of pivotal economic importance in order to manage efficiently inter-organizational cooperation and business information flows. Consequently, the availability of generally accepted electronic communication standards is essential in order to decrease communication-related transaction costs. Roman Beck elaborates in his dissertation *The Network(ed) Economy* the importance of the so far independently from each other discussed diffusion theory on the one hand and network effect theory on the other hand. However, Roman Beck not only connects the two theories epistemologically but also develops and extends those theories by providing a network diffusion model. The core of his model is the so-called network effect helix, where a dynamic and self-enforcing interplay between direct and indirect network effects is deployed to simulate diffusion patterns and paths of communication standards. In his analysis, Roman Beck especially focused on the critical

diffusion period between the market launch of a new communication standard and in case of a successful diffusion the achievement of a critical mass of adopters His research results and consequently the chosen title of the thesis are capable to illustrate the overall topic of his work in the interesting area between an incompletely interconnected networked economy on the one hand and a completely interconnected network economy

Handbook of Industrial Organization Mark Armstrong, Robert H. Porter, 2007-10-05 This is Volume 3 of the Handbook of Industrial Organization series HIO Volumes 1 2 published simultaneously in 1989 and many of the chapters were widely cited and appeared on graduate reading lists Since the first volumes published the field of industrial organization has continued to evolve and this volume fills the gaps While the first two volumes of HIO contain much more discussion of the theoretical literature than of the empirical literature it was representative of the field at that time Since then the empirical literature has flourished while the theoretical literature has continued to grow and this new volume reflects that change of emphasis This volume is an excellent reference and teaching supplement for industrial organization or industrial economics the microeconomics field that focuses on business behavior and its implications for both market structures and processes and for related public policies Part of the renowned Handbooks in Economics series Chapters are contributed by some of the leading experts in their fields A source reference and teaching supplement for industrial organizations or industrial economists
