Selected Papers from IIKII 2019 conferences in Symmetry Teen-Hang Meen, Charles Tijus, Jih-Fu Tu, 2020-12-15 The International Institute of Knowledge Innovation and Invention (IIKII) <http://www.iikii.org> promotes the exchange of innovations and inventions and establishes a communication platform for international innovations and research. In 2019, IIKII cooperates with the IEEE Tainan Section Sensors Council to hold IEEE conferences such as IEEE ICIASE 2019, IEEE ECBIOS 2019, IEEE ICKII 2019, ICUSA GAME 2019, and IEEE ECICE 2019. This Special Issue entitled *Selected Papers from IIKII 2019 conferences* aims to showcase outstanding papers from IIKII 2019 conferences, including symmetry in physics, chemistry, biology, mathematics, and computer science, etc. It selected 21 outstanding papers from 750 papers presented in IIKII 2019 conferences on the topic of symmetry. The main goals of this

Special Issue are to encourage scientists to publish their experimental and theoretical results in as much detail as possible and to discover new scientific knowledge relevant to the topic of symmetry **Selected Papers from IEEE ICKII 2018**

TeenHang Meen,Wenbing Zhao,2019-08-02 This book is a printed edition of the Special Issue Selected Papers from IEEE ICKII 2018 that was published in Sensors **Selected Papers in School Finance** ,2000 *Selected Papers in School*

Finance, 2000-01 ,2000 **Real-life Applications with Membrane Computing** Gexiang Zhang,Mario J.

Pérez-Jiménez,Marian Gheorghe,2017-04-05 This book thoroughly investigates the underlying theoretical basis of membrane computing models and reveals their latest applications In addition to date there have been no illustrative case studies or complex real life applications that capitalize on the full potential of the sophisticated membrane systems computational apparatus gaps that this book remedies By studying various complex applications including engineering optimization power systems fault diagnosis mobile robot controller design and complex biological systems involving data modeling and process interactions the book also extends the capabilities of membrane systems models with features such as formal verification techniques evolutionary approaches and fuzzy reasoning methods As such the book offers a comprehensive and up to date guide for all researchers PhDs and undergraduate students in the fields of computer science engineering and the bio

sciences who are interested in the applications of natural computing models **Foundations of Algebraic Specification**

and Formal Software Development Donald Sannella,Andrzej Tarlecki,2012-01-05 This book provides foundations for software specification and formal software development from the perspective of work on algebraic specification concentrating on developing basic concepts and studying their fundamental properties These foundations are built on a solid mathematical basis using elements of universal algebra category theory and logic and this mathematical toolbox provides a convenient language for precisely formulating the concepts involved in software specification and development Once formally defined these notions become subject to mathematical investigation and this interplay between mathematics and software engineering yields results that are mathematically interesting conceptually revealing and practically useful The theory presented by the authors has its origins in work on algebraic specifications that started in the early 1970s and their treatment is comprehensive This book contains five kinds of material the requisite mathematical foundations traditional algebraic specifications elements of the theory of institutions formal specification and development and proof methods While the book is self contained mathematical maturity and familiarity with the problems of software engineering is required and in the examples that directly relate to programming the authors assume acquaintance with the concepts of functional programming The book will be of value to researchers and advanced graduate students in the areas of programming and theoretical computer science Semantic Techniques in Quantum Computation Simon Gay,Ian Mackie,2010 The study of

computational processes based on the laws of quantum mechanics has led to the discovery of new algorithms cryptographic techniques and communication primitives This book explores quantum computation from the perspective of the branch of

theoretical computer science known as semantics as an alternative to the more well known studies of algorithmics complexity theory and information theory It collects chapters from leading researchers in the field discussing the theory of quantum programming languages logics and tools for reasoning about quantum systems and novel approaches to the foundations of quantum mechanics This book is suitable for graduate students and researchers in quantum information and computation as well as those in semantics who want to learn about a new field arising from the application of semantic techniques to quantum information and computation

Theories of Programming Cliff B. Jones, Jayadev Misra, 2021-09-26 Sir Tony Hoare has had an enormous influence on computer science from the Quicksort algorithm to the science of software development concurrency and program verification His contributions have been widely recognised He was awarded the ACM s Turing Award in 1980 the Kyoto Prize from the Inamori Foundation in 2000 and was knighted for services to education and computer science by Queen Elizabeth II of England in 2000 This book presents the essence of his various works the quest for effective abstractions both in his own words as well as chapters written by leading experts in the field including many of his research collaborators In addition this volume contains biographical material his Turing award lecture the transcript of an interview and some of his seminal papers Hoare s foundational paper An Axiomatic Basis for Computer Programming presented his approach commonly known as Hoare Logic for proving the correctness of programs by using logical assertions Hoare Logic and subsequent developments have formed the basis of a wide variety of software verification efforts Hoare was instrumental in proposing the Verified Software Initiative a cooperative international project directed at the scientific challenges of large scale software verification encompassing theories tools and experiments Tony Hoare s contributions to the theory and practice of concurrent software systems are equally impressive The process algebra called Communicating Sequential Processes CSP has been one of the fundamental paradigms both as a mathematical theory to reason about concurrent computation as well as the basis for the programming language occam CSP served as a framework for exploring several ideas in denotational semantics such as powerdomains as well as notions of abstraction and refinement It is the basis for a series of industrial strength tools which have been employed in a wide range of applications This book also presents Hoare s work in the last few decades These works include a rigorous approach to specifications in software engineering practice including procedural and data abstractions data refinement and a modular theory of designs More recently he has worked with collaborators to develop Unifying Theories of Programming UTP Their goal is to identify the common algebraic theories that lie at the core of sequential concurrent reactive and cyber physical computations
