

$$\underline{\text{Sol}^n} \Rightarrow (a) \quad \frac{d^3 y}{dx^3} - 2 \frac{d^2 y}{dx^2} - \frac{dy}{dx} + 2y = 0$$

$$\Rightarrow D^3 y - 2D^2 y - Dy + 2y = 0$$

$$\Rightarrow (D^3 - 2D^2 - D + 2) y = 0$$

Auxiliary eqⁿ can be written as by simply changing $D \rightarrow m$

$$m^3 - 2m^2 - m + 2 = 0$$

$$m^2(m-2) - 1(m-2) = 0$$

$$(m-2)(m^2-1) = 0$$

$$(m+1)(m-1)(m-2) = 0$$

$$m = -1, 1, 2$$

(CF) Complimentary function is given by — $y = c_1 e^{m_1 x} + c_2 e^{m_2 x} + c_3 e^{m_3 x}$ $\left\{ \begin{array}{l} \text{where } m_1 = -1 \\ m_2 = 1 \\ m_3 = 2 \end{array} \right.$

$$\boxed{y = c_1 e^{-x} + c_2 e^x + c_3 e^{2x}} \quad \text{--- (a)}$$

Particular Integral (PI)

$$y = \frac{0}{f(D)} = 0 \quad \text{--- (b)}$$

Total Solution is given as (adding (a) & (b))

$$\boxed{y = c_1 e^{-x} + c_2 e^x + c_3 e^{2x}}$$

* For all the parts PI would be zero because given differential equations are homogenous.
so total solution would be equal to CF only.

$$(b) \quad \frac{d^4 y}{dx^4} + 2 \frac{d^3 y}{dx^3} - 2 \frac{dy}{dx} - y = 0$$

$$\Rightarrow (D^4 + 2D^3 - 2D - 1) y = 0$$

Auxiliary eqⁿ \rightarrow

$$m^4 + 2m^3 - 2m - 1 = 0$$

Solving the above eqⁿ by ~~hit & trial~~ total method —

Selected Papers On Differential Equation:

Selected Papers on Ordinary Differential Equations, 1982 *Selected Papers on Differential Equations and Analysis*, 2005 **Selected Papers of Norman Levinson** J.A. Nohel, D.H. Sattinger, Gian-Carlo Rota, 1997-12-18 The deep and original ideas of Norman Levinson have had a lasting impact on fields as diverse as differential integral equations harmonic complex stochastic analysis and analytic number theory during more than half a century Yet the extent of his contributions has not always been fully recognized in the mathematics community For example the horseshoe mapping constructed by Stephen Smale in 1960 played a central role in the development of the modern theory of dynamical systems and chaos The horseshoe map was directly stimulated by Levinson's research on forced periodic oscillations of the Van der Pol oscillator and specifically by his seminal work initiated by Cartwright and Littlewood In other topics Levinson provided the foundation for a rigorous theory of singularly perturbed differential equations He also made fundamental contributions to inverse scattering theory by showing the connection between scattering data and spectral data thus relating the famous Gel'fand-Levitan method to the inverse scattering problem for the Schrödinger equation He was the first to analyze and make explicit use of wave functions now widely known as the Jost functions Near the end of his life Levinson returned to research in analytic number theory and made profound progress on the resolution of the Riemann Hypothesis Levinson's papers are typically tightly crafted and masterpieces of brevity and clarity It is our hope that the publication of these selected papers will bring his mathematical ideas to the attention of the larger mathematical community *Partial Differential Equations and Related Subjects* M. Rønquist, 2010-10-29 The book contains a selection of high quality papers chosen among the best presentations during the International Conference on Spectral and High Order Methods 2009 and provides an overview of the depth and breadth of the activities within this important research area The carefully reviewed selection of the papers will provide the reader with a snapshot of state of the art and help initiate new research directions through the extensive bibliography *Selected Papers II* Peter D Lax, 2005-05-20 A renowned mathematician who considers himself both applied and theoretical in his approach Peter Lax has spent most of his professional career at NYU making significant contributions to both mathematics and computing He has written several important published works and has received numerous honors including the National Medal of Science the Lester R Ford Award the Chauvenet Prize the Semmelweis Medal the Wiener Prize and the Wolf Prize Several students he has mentored have become leaders in their fields Two volumes span the years from 1952 up until 1999 and cover many varying topics from functional analysis partial differential equations and numerical methods to conservation laws integrable systems and scattering theory After each paper or collection of papers is a commentary placing the paper in context and where relevant discussing more recent developments Many of the papers in these volumes have become classics and should be read by any serious student of these topics In terms of insight depth and breadth Lax has few equals The reader of this selecta will quickly appreciate his brilliance as well as his masterful touch Having this collection of papers in one place allows one to follow the evolution of his ideas and mathematical interests and to appreciate how many of these papers initiated topics that developed lives of their own Menahem Max Schiffer: Selected Papers Volume 1 Peter Duren, Lawrence Zalcman, 2013-10-17 This two volume set presents over 50 of the most groundbreaking contributions of Menahem M Schiffer All of the reprints of Schiffer's works

herein have extensive annotation and invited commentaries giving new clarity and insight into the impact and legacy of Schiffer's work. A complete bibliography and brief biography make this a rounded and invaluable reference. **Selected Papers** Herbert Robbins, 2012-12-06 Herbert Robbins is widely recognized as one of the most creative and original mathematical statisticians of our time. The purpose of this book is to reprint on the occasion of his seventieth birthday some of his most outstanding research. In making selections for reprinting we have tried to keep in mind three potential audiences: 1 the historian who would like to know Robbins' seminal role in stimulating a substantial proportion of current research in mathematical statistics; 2 the novice who would like a readable conceptually oriented introduction to these subjects; and 3 the expert who would like to have useful reference material in a single collection. In many cases the needs of the first two groups can be met simultaneously. A distinguishing feature of Robbins' research is its daring originality which literally creates new specialties for subsequent generations of statisticians to explore. Often these seminal papers are also models of exposition serving to introduce the reader in the simplest possible context to ideas that are important for contemporary research in the field. An example is the paper of Robbins and Monroe which initiated the subject of stochastic approximation. We have also attempted to provide some useful guidance to the literature in various subjects by supplying additional references particularly to books and survey articles with some remarks about important developments in these areas. **Selected Papers from the 2018 41st International Conference on Telecommunications and Signal Processing (TSP)** Norbert Herencsar, Francesco Benedetto, Jorge Crichigno, 2019-07-01 This Special Issue contains a series of excellent research works on telecommunications and signal processing selected from the 2018 41st International Conference on Telecommunications and Signal Processing TSP which was held on July 4-6, 2018 in Athens, Greece. The conference was organized in cooperation with the IEEE Region 8 Europe, Middle East and Africa, IEEE Greece Section, IEEE Czechoslovakia Section and IEEE Czechoslovakia Section, SP-CAS-COM Joint Chapter by seventeen universities from the Czech Republic, Hungary, Turkey, Taiwan, Japan, Slovak Republic, Spain, Bulgaria, France, Slovenia, Croatia and Poland for academics, researchers and developers and serves as a premier international forum for the annual exchange and promotion of the latest advances in telecommunication technology and signal processing. The aim of the conference is to bring together both novice and experienced scientists, developers and specialists to meet new colleagues, collect new ideas and establish new cooperation between research groups from universities, research centers and private sectors worldwide. This collection of 10 papers is highly recommended for researchers and believed to be interesting, inspiring and motivating for readers in their further research. *Selected Papers on Classical Analysis* 〰〰〰, 2001 Six papers that originally appeared in the journal Sugaku in Japanese explore the general area of mathematical analysis as it pertains to free probability based on operator algebras. They cover the free products of operator algebras and free probability theory, the dynamics of Kleinian groups and the Hausdorff dimension of limit sets, topological methods in the stability analysis of travelling waves, an extension of almost periodic

functions and analyticity on flows Painleve equations in the past century and the Navier Stokes equation in various function spaces They are not indexed c Book News Inc **Neutrosophic Logic, Wave Mechanics, and Other Stories (Selected Works 2005-2008)** Florentin Smarandache,V. Christianto,2009 There is beginning for anything we used to hear that phrase The same wisdom word applies to us too What began in 2005 as a short email on some ideas related to interpretation of the WaveMechanics results in a number of papers and books up to now Some of these papers can be found in Progress in Physics or elsewhere Our purpose here is to present a selection of those papers in a compilation which enable the readers to find some coherent ideas which appeared in those articles For this reason the ordering of the papers here is based on categories of ideas
