Selective Oxidation By Heterogeneous Catalysis:

Selective Oxidation by Heterogeneous Catalysis Gabriele Centi, Fabrizio Cavani, Ferruccio Trifirò, 2012-12-06 Selective Oxidation by Heterogeneous Catalysis covers one of the major areas of industrial petrochemical production outlining open questions and new opportunities It gives keys for the interpretation and analysis of data and design of new catalysts and reactions and provides guidelines for future research A distinctive feature of this book is the use of concept by example Rather than reporting an overview of the literature results the authors have selected some representative examples the in depth analysis of which makes it possible to clarify the fundamental but new concepts necessary for a better understanding of the new opportunities in this field and the design of new catalysts or catalytic reactions Attention is given not only to the catalyst itself but also to the use of the catalyst inside the process thus evidencing the relationship between catalyst design and engineering aspects of the process This book provides suggestions for new innovative directions of research and indications on how to reconsider the field of selective oxidation from different perspectives outlining that is not a mature field of research but that new important breakthroughs can be derived from fundamental and applied research Suggestions are offered on how to use less conventional approaches in terms of both catalyst design and analysis of the data New Developments in Selective Oxidation by Heterogeneous Catalysis P. Ruiz, B. Delmon, 1992-02-06 This volume contains invited papers and communications presented at the Third European Workshop Meeting on Selective Oxidation by Heterogeneous Catalysis The purpose of the meeting was to present recent results and to discuss new aspects of partial oxidation by heterogeneous catalysis The following topics were discussed Novel processes for obtaining new fine chemicals by catalytic partial oxidation selective oxidation and oxidative dehydrogenation of alkanes new catalysts and advances in preparation methods of oxidation catalysts new phenomena in partial oxidation and new aspects of surface chemistry in oxide catalysts new applications of physicochemical methods for characterization of oxide catalysts oxidation with other agents than oxygen and catalytic oxidation of carbohydrates This book will provide a valuable set of data on reactions of selective oxidation which will be extremely useful to catalyst and related practitioners whether fundamentalists or highly applied and to process engineers who wish to evaluate current findings in this field The wide range approach to reactions of selective oxidation will disseminate knowledge in specialized areas of selective oxidation and encourage innovation and creativity

Manfred Baerns, Robert Schlögl, 1996 **Hydrocarbon Chemistry** George A. Olah, Árpád Molnár, 2003-09-10 Hydrocarbons and their transformations play major roles in chemistry as raw materials and sources of energy Diminishing petroleum supplies regulatory problems and environmental concerns constantly challenge chemists to rethink and redesign the industrial applications of hydrocarbons Written by Nobel Prize winner George Olah and hydrocarbon expert Árpád Molnár the completely revised and expanded Second Edition of Hydrocarbon Chemistry provides an unparalleled contemporary assessment of the field presenting basic concepts current research and future applications Hydrocarbon Chemistry begins by discussing the general aspects of hydrocarbons the separation of hydrocarbons from natural sources and the synthesis from C1 precursors with recent developments for possible future applications Each successive chapter deals with a specific type of hydrocarbon transformation The Second Edition includes a new section on the chemical reduction of carbon dioxide focusing on catalytic ionic electrocatalytic photocatalytic and enzymatic reductions as well as a new chapter on new catalysts and activation methods combinatorial chemistry and environmental chemistry Other topics covered include Major processes of the petrochemical industry such as cracking reforming isomerization and alkylation Derivation reactions to form carbon heteroatom bonds Hydrocarbon oxidations Metathesis Oligomerization and polymerization of hydrocarbons All chapters have been updated by adding sections on recent developments to review new advances and results Essential reading for practicing scientists in industry polymer and catalytic chemists as well as researchers and graduate students Hydrocarbon Chemistry Second Edition remains the benchmark text in its field *Microwave-assisted Heterogeneous Catalysis of Propene Selective Oxidation* Jia Sun, 2022 Adsorption on New and Modified Inorganic Sorbents A. Dabrowski, V.A. Tertykh, 1996-01-15 There has been a lack of authoritative current information on the structure investigation and preparation of inorganic sorbents

their numerous applications as well as the adsorption from gaseous and liquid phases on new and chemically modified inorganic solids This volume deals with the above mentioned themes and presents 34 up to date comprehensive and critical reviews written by well recognized authorities The sorbents discussed are primarily mineral ones Each contribution treats a problem critically by showing its development presenting documentation on the state of the art and identifying subjects for further research The book will be of interest to researchers in academic institutes and industrial laboratories engaged in the fields of surface chemistry inorganic chemistry adsorption ion exchange catalysis chromatography and spectroscopy of the surface phenomena as well as to students attending graduate and postgraduate courses

Experiments in Catalytic Reaction Engineering J.M. Berty, 1999-08-11 The science of catalytic reaction engineering studies the catalyst and the catalytic process in the laboratory in order to predict how they will perform in production scale reactors Surprises are to be avoided in the scaleup of industrial processes The laboratory results must account for flow heat and mass transfer influences on reaction rate to be useful for scaleup Calculated performance based on these results must also be useful to maximization of profit and safety and minimization of pollution To this end information on products as well as byproducts and heat produced must be generated If a sufficiently large database of knowledge is produced optimization studies will be possible later if economic conditions change The field of reaction engineering required new tools For kinetic and catalyst testing the most successful of these tools was the internal recycle reactor Studies in recycle reactors can be made under well defined conditions of flow and associated transfer processes and close to commercial operation The recycle reactor eliminates or minimizes the effect of transfer process and allows the remaining ones to be known Features of this book Provides insight into a field that is neither well understood nor properly appreciated Gives a deeper understanding of reaction engineering practice Helps avoid frustration and disappointment in industrial research This book is short and clear enough to assist all members of the R D and Engineering team whether reaction engineers or specialists in other fields This is critical in this new age of computation and communication when team members must each know at least something of their colleagues fields Additionally many scientists in more exploratory or fundamental fields can use recycle reactors to study basic phenomena free of transfer interactions

Jacobs, E.M. Flanigen, J.C. Jansen, Herman van

Bekkum, 2001-06-26 In view of the substantial progress made in the last decade in the fields of zeolites and related materials it was decided to go for an extended 2nd Edition of *Introduction to Zeolite Science and Practice* Unfortunately as often is the case this process took more time than expected by the Editors In the mean time some new texts on zeolites were issued Nevertheless the combination of data discussion and dedication provided by the present book is a unique coverage of the field in the opinion of the Editors In the present Edition the number of chapters rose from 16 to 22 The contributions can be divided into three categories updated chapters by the original authors updated chapters by an expanded or new team of authors and completely new chapters This 2nd Edition also contains new chapters on Zeolite based supramolecular assemblies by Dirk De Vos and Pierre Jacobs experts in this area and on The use of bulky probe molecules by Paul Kunkeler Roger Downing and one of the Editors Finally the super large pore zeolites and the fast growing area of ordered mesoporous materials are dealt with by Eelco Vogt Charlie Kresge and Jim Vartuli The latter two authors belong to the discoverers of the M41S family of mesoporous materials *Active Oxygen in Chemistry* Christopher S. Foote, Joan Selverstone Valentine, A. Greenberg, Joel F. Liebman, 2012-12-06 Taking an interdisciplinary approach this book and its counterpart *Active Oxygen in Biochemistry* explore the active research area of the chemistry and biochemistry of oxygen Complementary but independent the two volumes integrate subject areas including medicine biology chemistry engineering and environmental studies
