Selectivity In Information Systems Survival Of The Fittest:

Selectivity in Information Systems Kenneth S. Warren,1985 *Dilemmas in the Study of Information* Mary Neill,1992-01-27 This thought provoking book identifies the limits of the field of information science and thus raises very real problems of the discipline in the context of people using misusing and abusing information S D Neill provides many examples of the uses of information to illustrate how difficult it is to work with In particular he highlights problems of information scientists using information to study information It is the author s contention that information use problems are in certain instances insoluble dilemmas for they are grounded in human nature and can be solved only by altering that nature Neill analyzes certain events to show that while sufficient information was available it wasn t used either because of greed personality or judgement Information is power if and only if you have enough knowledge to understand it the will to use it and the ability to communicate it The dilemmas are found in the control of information for retrieval the use of data originally collected for other purposes and research methods in library and information science *Encyclopedia of Library and Information Science* Allen Kent,1987-11-24 The Encyclopedia of Library and Information Science provides an outstanding resource in 33 published volumes with 2 helpful indexes This thorough reference set written by 1300 eminent international experts offers librarians information computer scientists bibliographers documentalists systems analysts and students convenient access to the techniques and tools of both library and information science Impeccably researched cross referenced alphabetized by subject and generously illustrated the Encyclopedia of Library and Information Science integrates the essential theoretical and practical information accumulating in this rapidly growing field

Epistemic Cultures Karin Knorr Cetina,1999-05-01 How does science create knowledge Epistemic cultures shaped by affinity necessity and historical coincidence determine how we know what we know In this book Karin Knorr Cetina compares two of the most important and intriguing epistemic cultures of our day those in high energy physics and molecular biology Her work highlights the diversity of these cultures of knowing and in its depiction of their differences in the meaning of the empirical the enactment of object relations and the fashioning of social relations challenges the accepted view of a unified science By many accounts contemporary Western societies are becoming knowledge societies which run on expert processes and expert systems epitomized by science and structured into all areas of social life By looking at epistemic cultures in two sample cases this book addresses pressing questions about how such expert systems and processes work what principles inform their cognitive and procedural orientations and whether their organization structures and operations can be extended to other forms of social order The first ethnographic study to systematically compare two different scientific laboratory cultures this book sharpens our focus on epistemic cultures as the basis of the knowledge society **The Web of Knowledge** Eugene Garfield,2000 This new ASIST monograph is the first to comprehensively address the history theory and practical applications of citation analysis a field which has grown from Garfield s seed of an idea and to examine its impact on

scholarly research forty years after its inception In bringing together the analyses insights and reflections of more than thirty five leading lights editors Cronin and Atkins have produced both a comprehensive survey of citation indexing and its applications and a beautifully realized tribute to Eugene Garfield and his vision in honor of his seventy fifth birthday

Agricultural Economics and Rural Sociology Wallace C. Olsen,1991 The first of an eight volume series The Literature of the Agricultural Sciences this book analyzes the trends in the published literature of agricultural economics and rural sociology during the past fifty years It uses citation analysis and other bibliometric techniques to identify the primary journals report series and monographs of current importance to the developed industrial countries as well as those in the Third World

Mathematics Unbound: The Evolution of an International Mathematical Research Community, 1800-1945 Karen Hunger Parshall,2002 Although today s mathematical research community takes its international

character very much for granted this global nature is relatively recent having evolved over a period of roughly 150 years from the beginning of the nineteenth century to the middle of the twentieth century During this time the practice of mathematics changed from being centered on a collection of disparate national communities to being characterized by an international group of scholars for whom thegoal of mathematical research and cooperation transcended national boundaries Yet the development of an international community was far from smooth and involved obstacles such as war political upheaval and national rivalries Until now this evolution has been largely overlooked by historians andmathematicians alike This book addresses the issue by bringing together essays by twenty experts in the history of mathematics who have investigated the genesis of today s international mathematical community This includes not only developments within component national mathematical communities such as the growth of societies and journals but also more wide ranging political philosophical linguistic and pedagogical issues The resulting volume is essential reading for anyone interestedin the history of modern mathematics It will be of interest to mathematicians historians of mathematics and historians of science in general

A Statistical Model Stephen E. Fienberg,David C. Hoaglin,William H. Kruskal,Judith M. Tanur,2012-12-06 A large number of Mostellar s friends colleagues collaborators and former students have contributed to the preparation of this volume in honor of his 70th birthday It provides a critical assessment of Mosteller s professional and research contributions to the field of statistics and its applications

Healing the Schism Kerr L. White,2012-12-06 My conviction is that the matters addressed in this volume are of transcendental importance if we are to face up to the challenges of the 1990s and beyond How for instance are we to cope with a truly ecological approach to public health and all its concomitant changes of risk groups worldwide unless there is a full appre ciation of the popUlation perspective throughout the health establishment The global village has achieved a measure of interdependence requiring recognition by all concerned with the health of both individuals and communities that there is an urgent need to share our knowledge and deploy our resources in the best interests of people everywhere The history of public health initiatives the origins of epidemiology and the tragic separation

virtually a divorce of public health from medicine recounted in the chapters that follow argue strongly for an early rapprochement Health professionals who complement each other's knowledge and skills can be reunited through their common reliance on epidemiology as a major fundamental science for the entire health enterprise Henceforth epidemiology should be ranked in importance with cellular and molecular biology immunology and the social and systems sciences all are essential if we are to cope with the vast array of diseases and disorders that face us in both the developed and developing worlds We need more first rate laboratory scientists clinicians nurses aides village health workers and managers committed to serving the public *Journal of Information Science* ,1988 Principles practice **Making Science** Stephen Cole,1992

The sociology of science is dominated today by relativists who boldly argue that the content of science is not influenced by evidence from the empirical world but is instead socially constructed in the laboratory Making Science is the first serious critique by a sociologist of the social constructivist position Stephen Cole begins by making a distinction between two kinds of knowledge the core which consists of those contributions that have passed the test of evaluation and are universally accepted as true and important and the research frontier which is composed of all work in progress that is still under evaluation Of the thousands of scientific contributions made each year only a handful end up in the core What distinguishes those that are successful Agreeing with the constructivists Cole argues that there exists no set of rules that enables scientists to certify the validity of frontier knowledge This knowledge is underdetermined by the evidence and therefore social factors such as professional characteristics and intellectual authority can and do play a crucial role in its evaluation But Cole parts company with the constructivists when he asserts that it is impossible to understand which frontier knowledge wins a place in the core without first considering the cognitive characteristics of the contributions He concludes that although the focus of scientific research the rate of advance and indeed the everyday making of science are influenced by social variables and processes the content of the core of science is constrained by nature In Making Science Cole shows how social variables and cognitive variables interact in the evaluation of frontier knowledge **Selected Papers of Frederick Mosteller** Stephen E.

Fienberg,David C. Hoaglin,2007-02-01 One of the best known statisticians of the 20th century Frederick Mosteller has inspired numerous statisticians and other scientists by his creative approach to statistics and its applications This volume collects 40 of his most original and influential papers capturing the variety and depth of his writings It is hoped that sharing these writings with a new generation of researchers will inspire them to build upon his insights and efforts **Encyclopedia**

of Library and Information Sciences John D. McDonald,Michael Levine-Clark,2017-03-15 The Encyclopedia of Library and Information Sciences comprising of seven volumes now in its fourth edition compiles the contributions of major researchers and practitioners and explores the cultural institutions of more than 30 countries This major reference presents over 550 entries extensively reviewed for accuracy in seven print volumes or online The new fourth edition which includes 55 new entries and 60 revised entries continues to reflect the growing convergence among the disciplines that influence information

and the cultural record with coverage of the latest topics as well as classic articles of historical and theoretical importance

Expert Systems for Reference and Information Retrieval Ralph Alberico,Mary Micco,1990 **Smoothen Pebbles**

Jonathan R. Cole,2024-04-26 Until the middle of the twentieth century few thought of science as a social system instead seeing scientific discovery as the work of individual geniuses Columbia University s Department of Sociology played a pivotal role in advancing the social study of science Researchers of the Columbia Program analyzed how science works as a social institution exploring its norms values and structure Smoothen Pebbles presents a collection of essays authored or coauthored by Jonathan R Cole a leading Columbia Program figure that trace the development and institutionalization of the sociology of science Spanning from the 1960s to the 2020s and including both empirical and theoretical studies of science the book is at once wide ranging and united by core questions Are scientists rewarded for the merits of their work or for other reasons How does the system of social stratification in science operate Has the funding of scientists been the result of an old boys network How fair is the peer review process In what ways does science fall short of its universalistic ideals What factors have constrained opportunities for women in science How has science fared amid attacks on academic freedom and free inquiry at universities Cole s introduction contextualizes both individual essays and the major concerns of the Columbia Program Smoothen Pebbles is essential reading for those interested in the growth and crucial questions of the sociology and social studies of science Concepts of Information Retrieval Miranda Lee Pao,1989 **Handbook of Libraries, Archives & Information Centres in India** B. M. Gupta,1996 **Computing Nature** Gordana Dodig-Crnkovic,Raffaela

Giovagnoli,2013-03-21 This book is about nature considered as the totality of physical existence the universe and our present day attempts to understand it If we see the universe as a network of networks of computational processes at many different levels of organization what can we learn about physics biology cognition social systems and ecology expressed through interacting networks of elementary particles atoms molecules cells and especially neurons when it comes to understanding of cognition and intelligence organs organisms and their ecologies Regarding our computational models of natural phenomena Feynman famously wondered Why should it take an infinite amount of logic to figure out what one tiny piece of space time is going to do Phenomena themselves occur so quickly and automatically in nature Can we learn how to harness nature s computational power as we harness its energy and materials This volume includes a selection of contributions from the Symposium on Natural Computing Unconventional Computing and Its Philosophical Significance organized during the AISB IACAP World Congress 2012 held in Birmingham UK on July 2 6 on the occasion of the centenary of Alan Turing s birth In this book leading researchers investigated questions of computing nature by exploring various facets of computation as we find it in nature relationships between different levels of computation cognition with learning and intelligence mathematical background relationships to classical Turing computation and Turing s ideas about computing nature unorganized machines and morphogenesis It addresses questions of information representation and computation interaction as communication

concurrency and agent models in short this book presents natural computing and unconventional computing as extension of the idea of computation as symbol manipulation **ARIST 30** Martha E. Williams,1995-11 *The Future of Medical Journals* Stephen Lock,1991
