## **Self Awareness In Animals And Humans Developmental Perspectives:**

*Self-Awareness in Animals and Humans* Sue Taylor Parker, Robert W. Mitchell, Maria L. Boccia, 2006-05-11 Self Awareness in Animals and Humans a collection of original articles on self awareness in monkeys apes humans and other species focuses on controversies about how to measure self awareness which species are capable of self awareness and which are not and why Several chapters focus on the controversial question of whether gorillas like other great apes and human infants are capable of mirror self recognition MSR or whether they are anomalously unable to do so Other chapters focus on whether macaque monkeys are capable of MSR The focus of the chapters is both comparative and developmental several contributors explore the value of frameworks from human developmental psychology for comparative studies This dual focus comparative and developmental reflects the interdisciplinary nature of the volume which brings together biological anthropologists comparative and developmental psychologists and cognitive scientists from Japan France Spain Hungary New Zealand Scotland and the United States

**The Mentalities of Gorillas and Orangutans** Sue Taylor Parker, Robert W. Mitchell, H. Lyn Miles, 1999-08-26 Research on the mental abilities of chimpanzees and bonobos has been widely celebrated and used in reconstructions of human evolution In contrast less attention has been paid to the abilities of gorillas and orangutans This 1999 volume aims to help complete the picture of hominoid cognition by bringing together the work on gorillas and orangutans and setting it in comparative perspective The introductory chapters set the evolutionary context for comparing cognition in gorillas and orangutans to that of chimpanzees bonobos and humans The remaining chapters focus primarily on the kinds and levels of intelligence displayed by orangutans and gorillas compared to other great apes including performances in the classic domains of tool use and tool making imitation self awareness social communication and symbol use All those wanting more information on the mental abilities of these sometimes neglected but important primates will find this book a treasure trove

**Reaching Into Thought** Anne E. Russon, Kim A. Bard, Sue Taylor Parker, 1998-11-26 What special qualities of mind set the great apes apart from other nonhuman primates and indeed from ourselves In this book field and laboratory researchers show that the great apes have high level abilities in both social and ecological domains including tool use pretense self awareness deception consolation teaching and culture itself Great apes are also shown to be capable of thinking at symbolic levels traditionally considered to be uniquely human Here the mechanisms involved in building these abilities especially the lengthy developmental and enculturation processes are emphasized showing how new discoveries are changing views on how primates and human intelligence evolved This book is for anyone interested in current research and theoretical views of great ape cognition

**The Animal Ethics Reader** Susan J. Armstrong, Richard G. Botzler, 2016-11-18 The Animal Ethics Reader is an acclaimed anthology containing both classic and contemporary readings making it ideal for anyone coming to the subject for the first time It provides a thorough introduction to the central topics controversies and ethical dilemmas surrounding the treatment of animals covering a wide range of

contemporary issues such as animal activism genetic engineering and environmental ethics The extracts are arranged thematically under the following clear headings Theories of Animal Ethics Nonhuman Animal Experiences Primates and Cetaceans Animals for Food Animal Experimentation Animals and Biotechnology Ethics and Wildlife Zoos and Aquariums Animal Companions Animal Law and Animal Activism Readings from leading experts in the field including Peter Singer Bernard E Rollin and Jane Goodall are featured as well as selections from Tom Regan Jane Goodall Donald Griffin Temple Grandin Ben A Minteer Christine Korsgaard and Mark Rowlands Classic extracts are well balanced with contemporary selections helping to present the latest developments in the field This revised and updated Third Edition includes 31 new readings on a range of subjects including animal rights captive chimpanzees industrial farm animal production genetic engineering keeping cetaceans in captivity animal cruelty and animal activism The Third Edition also is printed with a slightly larger page format and in an easier to read typeface Featuring contextualizing introductions by the editors study questions and further reading suggestions as the end of each chapter this will be essential reading for any student taking a course in the subject With a new foreword by Bernard E Rollin     *Picture Perception in Animals* Joel Fagot, 2013-06-17

Animal researchers commonly present pictures to their subjects usually birds or monkeys in order to infer how natural objects are perceived and conceptualised or to discover the brain mechanisms underlying these abilities This unique book questions the premise of this experimental approach and asks whether or not pictures can be considered as ecologically valid and realistic stimuli for animals Leading researchers in comparative psychology and neuroscience address such questions as Can animals recognise objects of scenes in pictures despite variations in viewpoints How do animals perceive faces and Is there an equivalence in animals minds between pictures and the objects they represent The result is an authoritative and cutting edge survey of current knowledge in the field which underlines the advantages limits and risks of using pictures to infer cognitive abilities or brain mechanisms in animal studies *Picture Perception in Animals* will be essential reading for comparative psychologists anthropologists and neuroscientists working in picture perception     *Developing a Social Psychology of Monkeys and Apes* John Chadwick-Jones, 2025-01-06 Originally published in 1998 the aim of *Developing a Social Psychology of Monkeys and Apes* was to draw attention to the exciting progress of studies of the social psychology of monkeys and apes happening at the time It is written with a clear style which should invite interest from a wide range of social scientists The relatedness of humans and non human primates that was usually considered in its genetic forms is followed through into the complex social tactics of monkeys and apes The focus of the book was on the latest research as it had developed out of earlier classic studies The wave of researchers working on social topics at the time is especially emphasized This book will be of particular interest to primatologists ethologists anthropologists zoologists social psychologists and students of social cognition and social interaction For students the appendices provide useful information on the variety of social structures of Old World and New World monkeys and apes     *Handbook of Personality* Oliver P.

John, Richard W. Robins, 2021-01-26 Now in a revised and expanded fourth edition this definitive reference and text has more than 50% new material reflecting a decade of theoretical and empirical advances Prominent researchers describe major theories and review cutting edge findings The volume explores how personality emerges from and interacts with biological developmental cognitive affective and social processes and the implications for well being and health Innovative research programs and methods are presented throughout The concluding section showcases emerging issues and new directions in the field New to This Edition Expanded coverage of personality development with chapters on the overall life course middle childhood adolescence and early adulthood Three new chapters on affective processes plus chapters on neurobiology achievement motivation cognitive approaches narcissism and other new topics Section on cutting edge issues personality interventions personality manifestations in everyday life geographical variation in personality self knowledge and the links between personality and economics Added breadth and accessibility 42 more concise chapters compared to 32 in the prior edition

**Rekindling the Waters** Leah Lemieux, 2009 This book is essential reading for anyone who loves dolphins It reveals the truth about swimming with dolphins

A Communion of Subjects Paul Waldau, Kimberley Patton, 2009-05-22 A Communion of Subjects is the first comparative and interdisciplinary study of the conceptualization of animals in world religions Scholars from a wide range of disciplines including Thomas Berry cultural history Wendy Doniger study of myth Elizabeth Lawrence veterinary medicine ritual studies Marc Bekoff cognitive ethology Marc Hauser behavioral science Steven Wise animals and law Peter Singer animals and ethics and Jane Goodall primatology consider how major religious traditions have incorporated animals into their belief systems myths rituals and art Their findings offer profound insights into the relationship between human beings and animals and a deeper understanding of the social and ecological web in which we all live

*Primate Origins of Human Cognition and Behavior* Tetsuro Matsuzawa, 2009-03-12 Biologists and anthropologists in Japan have played a crucial role in the development of primatology as a scientific discipline Publication of *Primate Origins of Human Cognition and Behavior* under the editorship of Tetsuro Matsuzawa reaffirms the pervasive and creative role played by the intellectual descendants of Kinji Imanishi and Junichiro Itani in the fields of behavioral ecology psychology and cognitive science Matsuzawa and his colleagues humans and other primate partners explore a broad range of issues including the phylogeny of perception and cognition the origin of human speech learning and memory recognition of self others and species society and social interaction and culture With data from field and laboratory studies of more than 90 primate species and of more than 50 years of long term research the intellectual breadth represented in this volume makes it a major contribution to comparative cognitive science and to current views on the origin of the mind and behavior of humans

*Navigating the Social World* Mahzarin R. Banaji, Susan A. Gelman, 2013-03-26 Navigating the social world requires sophisticated cognitive machinery that although present quite early in crude forms undergoes significant change across the lifespan This book will be the first to report on evidence that has accumulated on an unprecedented scale showing us what

capacities for social cognition are present at birth and early in life and how these capacities develop through learning in the first years of life The volume will highlight what is known about the discoveries themselves but also what these discoveries imply about the nature of early social cognition and the methods that have allowed these discoveries what is known concerning the phylogeny and ontogeny of social cognition To capture the full depth and breadth of the exciting work that is blossoming on this topic in a manner that is accessible and engaging the editors invited 70 leading researchers to develop a short report of their work that would be written for a broad audience The purpose of this format was for each piece to focus on a single core message are babies aware of what is right and wrong why do children have the same implicit intergroup preferences that adults do what does language do to the building of category knowledge and so on The unique format and accessible writing style will be appealing to graduate students and researchers in cognitive psychology developmental psychology and social psychology

Comparative Psychology Gary Greenberg, Maury M. Haraway, 1998 This volume traces the modern critical and performance history of this play one of Shakespeare's most loved and most performed comedies The essay focus on such modern concerns as feminism deconstruction textual theory and queer theory

*Attitudes to Animals* Francine L. Dolins, 1999-02-13 This thought provoking book will ask what it is to be human what to be animal and what are the natures of the relationships between them This is accomplished with philosophical and ethical discussions scientific evidence and dynamic theoretical approaches Attitudes to Animals will also encourage us to think not only of our relationships to non human animals but also of those to other human animals This book provides a foundation that the reader can use to make ethical choices about animals It will challenge readers to question their current views attitudes and perspectives on animals nature and development of the human animal relationship Human perspectives on the human animal relationships reflect what we have learned together with spoken and unspoken attitudes and assumptions from our families societies media education and employment

**The Cambridge Handbook of Animal Cognition** Allison B. Kaufman, Josep Call, James C. Kaufman, 2021-07-22 This handbook lays out the science behind how animals think remember create calculate and remember It provides concise overviews on major areas of study such as animal communication and language memory and recall social cognition social learning and teaching numerical and quantitative abilities as well as innovation and problem solving The chapters also explore more nuanced topics in greater detail showing how the research was conducted and how it can be used for further study The authors range from academics working in renowned university departments to those from research institutions and practitioners in zoos The volume encompasses a wide variety of species ensuring the breadth of the field is explored

*Language in Cognitive Development* Katherine Nelson, 1998-03-13 This book discusses the role of language as a cognitive and communicative tool in a child's early development

Good Natured Frans B. M. DE WAAL, F. B. M. de Waal, 2009-06-30 To observe a dog's guilty look to witness a gorilla's self sacrifice for a wounded mate to watch an elephant herd's communal effort on behalf of a stranded calf to catch animals in certain acts is to wonder what moves them

Might there be a code of ethics in the animal kingdom Must an animal be human to be humane In this provocative book a renowned scientist takes on those who have declared ethics uniquely human Making a compelling case for a morality grounded in biology he shows how ethical behavior is as much a matter of evolution as any other trait in humans and animals alike World famous for his brilliant descriptions of Machiavellian power plays among chimpanzees the nastier side of animal life Frans de Waal here contends that animals have a nice side as well Making his case through vivid anecdotes drawn from his work with apes and monkeys and bolstered by the intriguing voluminous data from his and others ongoing research de Waal shows us that many of the building blocks of morality are natural they can be observed in other animals Through his eyes we see how not just primates but all kinds of animals from marine mammals to dogs respond to social rules help each other share food resolve conflict to mutual satisfaction even develop a crude sense of justice and fairness Natural selection may be harsh but it has produced highly successful species that survive through cooperation and mutual assistance De Waal identifies this paradox as the key to an evolutionary account of morality and demonstrates that human morality could never have developed without the foundation of fellow feeling our species shares with other animals As his work makes clear a morality grounded in biology leads to an entirely different conception of what it means to be human and humane

**Advances in Brain Inspired Cognitive Systems** Cheng-Lin Liu, Amir Hussain, Bin Luo, Kay Chen Tan, Yi Zeng, Zhaoxiang Zhang, 2016-11-11 This book constitutes the refereed proceedings of the 8th International Conference on Brain Inspired Cognitive Systems BICS 2016 held in Beijing China in November 2016 The 32 full papers presented were carefully reviewed and selected from 43 submissions They discuss the emerging areas and challenges present the state of the art of brain inspired cognitive systems research and applications in diverse fields by covering many topics in brain inspired cognitive systems related research including biologically inspired systems cognitive neuroscience models consciousness and neural computation Comparative Approaches to Cognitive Science H. L. Roitblat, Jean-Arcady Meyer, 1995 Presents an animal based largely non symbolic approach to understanding the basic mechanisms involved in adaptive intelligence Contributions discuss and explain concepts and techniques providing a balance of both theoretical and empirical approaches **The Cognitive Animal** Marc Bekoff, Colin Allen, Gordon M. Burghardt, 2002-06-21 The fifty seven original essays in this book provide a comprehensive overview of the interdisciplinary field of animal cognition The contributors include cognitive ethologists behavioral ecologists experimental and developmental psychologists behaviorists philosophers neuroscientists computer scientists and modelers field biologists and others The diversity of approaches is both philosophical and methodological with contributors demonstrating various degrees of acceptance or disdain for such terms as consciousness and varying degrees of concern for laboratory experimentation versus naturalistic research In addition to primates particularly the nonhuman great apes the animals discussed include antelopes bees dogs dolphins earthworms fish hyenas parrots prairie dogs rats ravens sea lions snakes spiders and squirrels The topics include but are not limited to definitions of

cognition the role of anecdotes in the study of animal cognition anthropomorphism attention perception learning memory thinking consciousness intentionality communication planning play aggression dominance predation recognition assessment of self and others social knowledge empathy conflict resolution reproduction parent young interactions and caregiving ecology evolution kin selection and neuroethology     *An Ape Ethic and the Question of Personhood* Gregory F. Tague, 2020-03-05 Gregory F Tague's *An Ape Ethic and the Question of Personhood* argues that great apes are moral individuals because they engage in a land ethic as ecosystem engineers to generate ecologically sustainable biomes for themselves and other species Tague shows that we need to recognize apes as eco engineers in order to save them and their habitats and that in so doing we will ultimately save earth's biosphere The book draws on extensive empirical research from the ecology and behavior of great apes and synthesizes past and current understanding of the similarities in cognition social behavior and culture found in apes Importantly this book proposes that differences between humans and apes provide the foundation for the call to recognize forest personhood in the great apes While all ape species are alike in terms of cognition intelligence and behaviors there is a vital contrast unlike humans great apes are efficient ecological engineers Therefore simian forest sovereignty is critical to conservation efforts in controlling global warming and apes should be granted dominion over their tropical forests Weaving together philosophy biology socioecology and elements from eco psychology this book provides a glimmer of hope for future acknowledgment of the inherent ethic that ape species embody in their eco centered existence on this planet
