Promoting Healthy Aging Across the Lifespan Elena Carrillo-Alvarez, Miriam Rodriguez-Monforte,Jordi Vilaró, Katherine Simone McGilton,2024-12-26 Worldwide there is a generalized trend toward aged societies Between 2015 and 2050 the proportion of the world s population over 60 years will nearly double from 12% to 22% As life expectancy continues to increase and natality rates lower not only the composition of countries will change but also its health landscape However an increased life expectancy does not necessarily mean a healthy life In most high income countries more than 20% of those years are lived in ill health due to chronic conditions caused by non communicable diseases which compromises functional ability and well being key components of healthy aging In this way not only people s lives but also societal structures are being affected Based on the life course approach to healthy aging aging starts from conception In this regard the promotion of healthy aging requires preventive strategies that enhance capacities during growth and development maintain them for as long as possible after maturity and slow down their rate of decline Moreover considering healthy aging across the lifespan entails focusing on different factors life opportunities and choices that might significantly influence health status lifestyle as well as health and social inequalities in older age and challenges the focus of most research on the topic which exclusively investigates the effect of influences operating in the later stages of life

Personal Competences in the Academic and Work Environment: Advancing Towards Psychological Wellbeing María del Mar Molero Jurado,María del Carmen Pérez-Fuentes ,Carol D. Ryff,Pablo Molina,2025-09-01 A behavioral repertoire composed of personal competencies such as emotional intelligence self awareness self esteem resilience assertiveness and autonomy has been considered crucial for positive personal and individual development These competencies support healthy psychological functioning and have a positive impact on promoting the health and psychological well being of individuals The relevance of psychological well being is not limited to the absence of psychological distress but implies a state of fulfillment and satisfaction in the various domains of a person s life Personal competencies are therefore a crucial skill for people s lives in general and in the academic and work environment in particular It has been found that professionals in any field of work with good levels of personal competencies experience greater job satisfaction better management of demanding situations and less job burnout
