Superintendent of Documents,1990 **Airlift Capabilities for Future U.S. Counterinsurgency Operations** Robert C. Owen,Karl P. Mueller,2007 Current and probable future United States involvement in counterinsurgencies revives a long standing debate about whether these missions call for adding specialized aircraft training or other resources to the general military airlift fleet The authors examine the use of airlift in past and present counterinsurgency operations including the Foreign Internal Defense program They conclude that general U S airlift forces can accomplish most counterinsurgency missions effectively with adjustments in employment doctrines and training However they also note that continued operations likely will require reinforcement of the general airlift fleet and perhaps acquisition of a small fleet element optimized for certain counterinsurgency missions *Strategic Mobility* ,1990 **Air Power and Warfare** Elwood L. rapidly transport troops and supplies to distant crisis points has not been complemented as Menarchik shows by adequate lift capabilities. The author uses the six month buildup to Desert Storm as proof that the United States needs to increase the priority of logistics in strategy and improve its strategic transport capabilities especially surge strategic lift. Current transport capabilities will not be positioned or structured to respond effectively to the contingencies associated with America's growing responsibilities given the realities of the New World Order. Menarchik himself an experienced pilot policy planner and operational commander clearly demonstrates that Powerlift directly affects choices timing strategy development and implementation and sweeping policy options. He shows that although combat strategy and tactics receive high profile attention it is Lift capability and capacity as a prerequisite that is fundamental to attaining objectives. Readers will learn where how and why America needs to improve its capabilities.
