Linguistics for Clinicians is primarily a linguistics textbook for students and teachers on clinical courses It is also a useful resource for practising clinicians psycholinguistics students and researchers in language impairments The Routledge Handbook of Vocabulary Studies Stuart Webb, 2019-07-30 The Routledge Handbook of Vocabulary Studies provides a cutting edge survey of current scholarship in this area Divided into four sections which cover understanding vocabulary approaches to teaching and learning vocabulary measuring knowledge of vocabulary and key issues in teaching researching and measuring vocabulary this Handbook brings together a wide range of approaches to learning words to provide clarity on how best vocabulary might be taught and learned provides a comprehensive discussion of the key issues and challenges in vocabulary studies with research taken from the past 40 years includes chapters on both formulaic language as well as single word items features original contributions from a range of internationally renowned scholars as well as academics at the forefront of innovative research The Routledge Handbook of Vocabulary Studies is an essential text for those interested in teaching learning and researching vocabulary Handbook of the Neuroscience of Language Brigitte Stemmer, Harry A. Primary Progressive Aphasia and Other Frontotemporal Dementias Rene L.

Utianski, 2019-09-16 Primary Progressive Aphasia and Other Frontotemporal Dementias: Diagnosis and Treatment of Associated Communication Disorders is the second volume in the Medical Speech Language Pathology book series. It is intended to fill an unmet need to assist clinicians, students, and related healthcare professionals in the diagnosis and treatment of the title disorders. There is a growing population of individuals diagnosed with various forms of Frontotemporal Dementia, FTD, and Primary Progressive Aphasia, PPA, and this number is likely to increase as medical practitioners and speech language pathologists, SLPs, become more expert at identifying these conditions. More clinicians will be seeing and treating patients with a diagnosis of FTD or PPA. Toward that end, the goal of this book is to expand this clinical knowledge base and support the development of skills in diagnosis but also in clinical management. Within each chapter is a concise presentation of available evidence-based practice and research findings with a focus on sharing information that is clinically applicable and digestible for non-researchers. Each chapter provides a comprehensive outline of testing that will assist in the diagnosis of the cognitive communication disorders associated with FTD, PPAs, and primary progressive apraxia of speech, PPAOS. Disclaimer: Please note that ancillary content such as documents, audio, and video, etc., may not be included as published in the original print version of this book.

Chhaya, 2024-02-29 This monograph is an extension of the earlier monographs dealing with the application of the new modified involuted manifold model This monograph has two objectives Firstly it seeks to integrate neuronal organization with cognitive functionalities Secondly it tries to formalize a structural template of cognitive functionalities It is based on the postulate that cognitive functionalities are essentially natural phenomena and therefore amenable to formal naturalistic description Therefore it employs a topological model of spacetime proposed earlier to define a new framework wherein neuronal networks occupy the four dimensional configurations of spacetime and cognitive functionalities occupy higher dimensional configurations of spacetime Using the Darwinian conception of natural selection the monograph outlines a model of natural selection operating at more than one level Thus natural selection at the four dimensional configurations of spacetime leads to structural agnosticism so prevalent in neuronal organization At the same time natural selection at the higher dimensional configurations of spacetime leads to natural selection of cognitive functionalities Since the proposed model offers a new computational paradigm formalized in another monograph this monograph provides a new way to formalize cognitive computations Communication in Healthcare Karen Bryan, 2009 Communication within the context of health and social care faces many challenges Our understanding of how language and communication information is processed by the brain is increasing our awareness of the complexities involved and the influence of normal ageing on communication processing Care
