What is Cognitive Semantics?

Meaning Construction

Cognitive Semantics focuses on how people construct meaning through conceptual and experiential processes, rather than just examining formal linguistic structures.

Embodied Approach

It views language and meaning as grounded in the human body, senses, and physical and social interactions with the world.

Conceptual Structures

Cognitive Semantics explores the conceptual structures, such as frames, metaphors, and mental spaces, that underlie linguistic meaning.

Semantics and Cognition Ray S. Jackendoff, 1985-09-10 This book emphasizes the role of semantics as a bridge between the theory of language and the theories of other cognitive capacities such as visual perception and motor control

Semantics, Culture, and Cognition Anna Wierzbicka, 1992-10-22 Not everything that can be said in one language can be said in another The lexicons of different languages seem to suggest different conceptual universes Investigating cultures from a universal language independent perspective this book rejects analytical tools derived from the English language and Anglo culture and proposes instead a natural semantic metalanguage formulated in English words but based on lexical universals The outcome of two and a half decades of research the metalanguage is made up of universal semantic primitives in terms of which all meanings including the most culture specific ones can be described and compared in a precise and illuminating way Integrating insights from linguistics cultural anthropology and cognitive psychology and written in simple non technical language Semantics Culture and Cognition is accessible not only to scholars and students but also to the general reader interested in semantics and the relationship between language and culture

Evaluative Semantics Jean-Pierre Malrieu, 2002-01-08 Evaluation from connotations to complex judgements of value is probably the most neglected dimension of meaning Calling for a new understanding of truth and value this book is a comprehensive study of evaluation in natural language at lexical syntactic and discursive levels Jean Pierre Malrieu explores the cognitive foundations of evaluation and uses connectionist networks to model evaluative processes He takes into account the social dimension of evaluation showing that ideological contexts account for evaluative variability A discussion of compositionality and opacity leads to the argument that a semantics of evaluation has some key advantages over truth conditional semantics and as an example Malrieu applies his evaluative semantics to a complex Shakespeare text His connectionist model yields a mathematical estimation of the consistency of text with ideology and is particularly useful in the identification of subtle rhetorical devices such as irony

Cognitive Semantics Jens S. Allwood, Peter Gärdenfors, 1999 Toward the end of the 20th century there is both a dissatisfaction with existing formal semantic theories and a wish to preserve insights from other semantic traditions Cognitive semantics the latest of the major trends which have dominated the century attempts to do this by focusing on meaning as a cognitive phenomenon This book provides different perspectives on meaning as a cognitive phenomenon Jens Allwood presents an approach where meaning is analyzed in terms of context sensitive cognitive operations Peter Gärdenfors examines the relationship between cognitive semantics and standard formal extensional and intensional semantics Peter Harder discusses the relation between functionalism and cognitive semantics Søren Sjøstrøm and Ole Viberg extend a cognitive semantic approach to new empirical domains like vision and physical contact Elisabeth Engberg Pedersen extends the use of cognitive semantics even further in order to analyze deaf sign language and

finally Kenneth Holmqvist and Jordan Zlatev discuss two different possibilities of implementing a cognitive semantic approach using computer programs The variety of perspectives on cognitive semantics make this book suitable as course material

Concepts, Frames and Cascades in Semantics, Cognition and Ontology Sebastian Löbner,Thomas Gamerschlag,Tobias Kalenscher,Markus Schrenk,Henk Zeevat,2021-05-28 This open access book presents novel theoretical empirical and experimental work exploring the nature of mental representations that support natural language production and understanding and other manifestations of cognition One fundamental question raised in the text is whether requisite knowledge structures can be adequately modeled by means of a uniform representational format and if so what exactly is its nature Frames are a key topic covered which have had a strong impact on the exploration of knowledge representations in artificial intelligence psychology and linguistics cascades are a novel development in frame theory Other key subject areas explored are concepts and categorization the experimental investigation of mental representation as well as cognitive analysis in semantics This book is of interest to students researchers and professionals working on cognition in the fields of linguistics philosophy and psychology

A User's Guide to Thought and Meaning Ray Jackendoff,2012-02-23 A profoundly arresting integration of the faculties of the mind of how we think speak and see the world Written with an informality that belies the originality of its insights and the radical nature of its conclusions this is the author s most important book since his groundbreaking Foundations of Language in 2002

Semantic Structures Ray S. Jackendoff,1992-04-22 Semantic Structures is a large scale study of conceptual structure and its lexical and syntactic expression in English that builds on the system of Conceptual Semantics described in Ray Jackendoff s earlier books Semantics and Cognition and Consciousness and the Computational Mind Jackendoff summarizes the relevant arguments in his two previous books setting out the basic parameters for the formalization of meaning and comparing his mentalistic approach with Fodor s Language of Thought hypothesis He then takes up the Problem of Meaning extending the range of semantic fields encompassed by the Conceptual Semantics formalism and the Problem of Correspondence

formalizing the relation between semantic and syntactic structure Both of these problems must be fully addressed in order to develop a general theory of language that is concerned with syntax and semantics and their points of connection Few books on lexical semantics present such a comprehensive analysis of such a wide range of phenomena from a unified perspective Besides discussing the conceptual structures of hundreds of words and constructions Jackendoff extends and deepens the theory to come to grips with such crucial issues as roles and marking arguments modifiers and adjuncts binding and control and the thematic linking hierarchy

Meaning and Cognition Liliana Albertazzi, 2000-11-15 The aim of this book is to present significant aspects of cognitive grammar by adopting an interdisciplinary approach The book provides an interplay of contributions by some exponents of cognitive grammar Langacker Croft Wood Geeraerts K vecses Wildgen and philosophers of language Albertazzi Marconi Peruzzi Violi who in most cases share a phenomenological and Gestalt approach to the problem of semantics The topics covered include themes that are central to the debate in cognitive grammar such as metaphor construal operations prototypicality Gestalt schemes and field semantics The book offers evidence to support the cognitive hypothesis in semantics and the existence of a close connection between the structures of perception and the categories of natural language Because of the approach employed with its consideration of borderline aspects among semantics linguistics theoretical reflection and historical analysis the book marks out a route for a philosophical inquiry complementary to a cognitive approach to the semantics of natural language Semantic Cognition Timothy T. Rogers, James L. McClelland, 2004 A mechanistic theory of the representation and use of semantic knowledge that uses distributed connectionist networks as a starting point for a psychological theory of semantic cognition

Language in Cognition Pieter A. M. Seuren, 2009-02-26 Language in Cognition argues that language is based on the human construal of reality Humans refer to and quantify over virtual entities with the same ease as they do over actual entities the natural ontology of language the author argues must therefore comprise both actual and virtual entities and situations He reformulates speech act theory suggesting that the primary function of language is less the transfer of information than the establishing of socially binding commitments or appeals based on the proposition expressed This leads him first to a new analysis of the systems and structures of cognitive language machinery and their ecological embedding and finally to a reformulation of the notion of meaning in which sentence meaning is distinguished from lexical meaning and the vagaries and multifarious applications of lexical meanings may be explained and understood This is the first of a two volume foundational study of language published under the title Language from Within Pieter Seuren discusses and analyses such apparently diverse issues as the ontology underlying the semantics of language speech act theory intensionality phenomena the machinery and ecology of language sentential and lexical meaning the natural logic of language and cognition and the intrinsically context sensitive nature of language and shows them to be intimately linked Throughout his ambitious enterprise he maintains a constant dialogue with established views reflecting on their development from Ancient Greece to the present

The resulting synthesis concerns central aspects of research and theory in linguistics philosophy and cognitive science

Semantic Structures Ray Jackendoff, 1990 *Semantic Structures* is a large scale study of conceptual structure and its lexical and syntactic expression in English that builds on the system of Conceptual Semantics described in Ray Jackendoff's earlier books *Semantics and Cognition* and *Consciousness and the Computational Mind* Jackendoff summarizes the relevant arguments in his two previous books setting out the basic parameters for the formalization of meaning and comparing his mentalistic approach with Fodor's Language of Thought hypothesis He then takes up the Problem of Meaning extending the range of semantic fields encompassed by the Conceptual Semantics formalism and the Problem of Correspondence formalizing the relation between semantic and syntactic structure Both of these problems must be fully addressed in order to develop a general theory of language that is concerned with syntax and semantics and their points of connection Few books on lexical semantics present such a comprehensive analysis of such a wide range of phenomena from a unified perspective Besides discussing the conceptual structures of hundreds of words and constructions Jackendoff extends and deepens the theory to come to grips with such crucial issues as roles and marking arguments modifiers and adjuncts binding and control and the thematic linking hierarchy Ray Jackendoff is Chairman of the Program in Linguistics and Cognitive Science at Brandeis University

Semantics. Structure and function Stefan Pahl, 2002-09-18 Essay from the year 2000 in the subject English Language and Literature Studies Linguistics grade 2 B University of Cologne English Seminar language English abstract Ray Jackendoff's semantic theory presented in *Semantics and Cognition* proposes that semantics is more than a field of linguistic studies it studies the very nature of thought and experience as well In this essay I will look at certain aspects of this theory and compare them to more traditional approaches to semantics It will become apparent that Jackendoff's theory in the end of the day is not only concerned with semantics but with the whole area of cognition as well

Cognitive Semantics. Embodied Cognition and Dynamic Mental Representations in Language Comprehension Katja Grasberger, 2019-08-15 Seminar paper from the year 2019 in the subject English Language and Literature Studies Linguistics grade 1 0 University of Bonn IAAK language English abstract This work aims to add to the body of research in the field of cognitive semantics by hypothesizing that the comprehension of a sentence auditorily presented describing a motion should facilitate the perception of a matching motion event presented visually To investigate dynamic representation in language comprehension an experiment was created in which 20 participants had to listen to a sentence which was followed by two pictures after which they had to judge whether the objects presented in the pictures were the same or not Both the sentence and pictures implied the motion of a ball toward or away from the participants In critical trials the two pictures always presented the same ball e.g. tennis ball which was also mentioned in the previous sentence and further either matched or mismatched the direction implied in the previous sentence To imply motion in the pictures the object in the first picture was either slightly smaller or larger than the second picture thus implying a motion away or toward the participant The paper will

start with a comprehensive overview of embodiment theory followed by an introduction to research and findings regarding dynamic mental representations in language comprehension Afterwards the methodology of this study will be described including information on the instrument and material used experimental procedure and informants The paper will then present most important findings which are relevant to answer the research questions posted In the following discussion the results will be discussed in the light of previous findings and method used At last the paper will summarize all noteworthy results and limitations of the study and will then give an outlook for further related research

Cultural Semantics and Social Cognition Carsten Levisen,2012-12-06 Presenting original detailed studies of keywords of Danish this book breaks new ground for the study of language and cultural values Based on evidence from the semantic categories of everyday language such as the Danish concept of hygge roughly meaning pleasant togetherness the book provides an integrative socio cognitive framework for studying and understanding language particular universes It is argued that the worlds we live in are not linguistically and conceptually neutral but rather that speakers who live by Danish concepts are likely to pay attention to their world in ways suggested by central Danish keywords and lexical grids By means of a sophisticated semantic methodology the author accounts for the meanings of even highly culture specific and untranslatable linguistic concepts The book offers new tools for comparative research into the diversity of semantic and cultural systems in contemporary Europe Additionally it contributes to the emerging discipline of cultural semantics and to the ongoing debates of linguistic diversity metalanguage and the use of linguistic evidence in studies of culture and social cognition

Construing Experience Through Meaning M.A.K. Halliday,Christian Matthiessen,2006-05-16 The subject of this book is how human beings construe their experience of the world The construction of experience is usually thought of as knowledge represented in the form of conceptual taxonomies schemata scripts and the like The authors offer an interpretation that is complementary to this treating experience not as knowing but as meaning and hence as something that is construed in language In other words the concern is with the construal of human experience as a semantic system and since language plays the central role not only in storing and exchanging experience but also in construing it language is taken as the interpretative base The focus of the book is both theoretical and descriptive The authors consider it important that theory and description should develop in parallel with constant interchange between the two The major descriptive component is an account of the most general features of the ideational semantics of English which is then exemplified in two familiar text types recipes and weather forecasts There is also a brief reference to the semantics of Chinese Theoretical issues are raised throughout as they become relevant to the discussion with the theoretical base being drawn from systemic functional linguistics Both the theoretical and descriptive proposals offered in the book are compared and contrasted with approaches deriving from AI cognitive science and cognitive linguistics

Guizzi,2023-10-03 Software is an essential enabler for science and the new economy but current software methodologies tools and techniques are often still not sufficiently robust or reliable for the constantly changing and evolving market and many promising approaches have proved to be no more than case oriented methods that are not fully automated This book presents the proceedings of SoMeT_23 the 22nd International Conference on New Trends in Intelligent Software Methodology Tools and Techniques held from 20-22 September 2023 in Naples Italy The conference brings together researchers and practitioners to share original research and practical development experience in software science and related new technologies and is an opportunity for the software science community to take stock of where they are today and consider future directions The 25 papers included here were carefully selected from the many high quality submissions received after a rigorous review process with each paper typically being reviewed by 3 or 4 reviewers Topics covered range from research practices techniques and methodologies to the solutions required by global business SoMeT_23 focused in particular on intelligent software the application of artificial intelligence techniques in software development and tackling human interaction in the development process for better high level interface with an emphasis on human centric software methodologies end user development techniques and emotional reasoning for an optimum performance between design tool and user Exploring trends theories and challenges in the integration of software and science for tomorrow's global information society the book captures a new state of the art in software science and its supporting technology and will be of interest to all those working in the field *Breadth and Depth of Semantic Lexicons* E. Viegas,2013-04-18 Most of the books about computational lexical semantic lexicons deal with the depth or content aspect of lexicons ignoring the breadth or coverage aspect This book presents a first attempt in the community to address both issues content and coverage of computational semantic lexicons in a thorough manner Moreover it addresses issues which have not yet been tackled in implemented systems such as the application time of lexical rules Lexical rules and lexical underspecification are also contrasted in implemented systems The main approaches in the field of computational lexical semantics are represented in the present book including Wordnet CyC Mikrokosmos Generative Lexicon This book embraces several fields and subfields as different as linguistics theoretical computational semantics pragmatics psycholinguistics cognitive science computer science artificial intelligence knowledge representation statistics and natural language processing The book also constitutes a very good introduction to the state of the art in computational semantic lexicons of the late 1990s
