Semantics In Databases:

Semantics in Databases Bernhard Thalheim, Leonid Libkin, 1998-02-25 This book presents a coherent survey on exciting developments in database semantics. The origins of the volume date back to a workshop held in Prague, Czech Republic, in 1995. The nine revised full papers and surveys presented were carefully reviewed for inclusion in the book. They address more traditional aspects like dealing with integrity constraints and conceptual modeling as well as new areas of databases: object orientation, incomplete information, database transformations, and other issues are investigated by applying formal semantics, e.g., the evolving algebra semantics.

Semantics in Databases Leopoldo Bertossi, Gyula O.H. Katona, Klaus-Dieter Schewe, Bernhard Thalheim, 2003-04-07 This book constitutes the thoroughly refereed post-proceedings of the Second International Workshop on Semantics in Databases held in Dagstuhl Castle, Germany, in January 2001. The 10 revised full papers presented together with an introduction by the volume editors were carefully selected during two rounds of reviewing. Among the aspects of database semantics discussed are semantic constraints, paraconsistency, logic foundations of databases, ER modeling, type hierarchies, null values, consistency enforcement, logic-based pattern languages, and semantic classification of queries. Among the classes of databases dealt with are deductive databases, relational databases, distributed information systems, and tree-structured data.

Database Semantics Zahir Tari, Scott Stevens, 1998-12-31 Database Semantics: Semantic Issues in Multimedia Systems reflects the state of the art of emerging research on the meaning of multimedia information as presented during IFIP's Eighth Data Semantics Working Conference (DS-8) organized by its Working Group 2.6 on Databases and held at Rotorua, New Zealand, in January 1999. DS-8 was planned as an active forum for researchers and practitioners focusing on those issues that involve the semantics of the information represented, stored, and manipulated by multimedia systems. Depending on the topic and state of research, issues may be covered either deeply theoretically or quite practically or even both. These proceedings contain twenty-one papers carefully selected by an International Programme Committee and organized in six thematic areas: Video Data Modelling and Use, Image Databases, Applications of Multimedia Systems, Multimedia Modeling in General, Multimedia Information Retrieval, Semantics and Metadata. For almost every area, important topics and issues include data modeling and query languages for media such as audio, video, and images; methodological aspects of multimedia database design; intelligent multimedia information retrieval; knowledge discovery and data mining in multimedia information; multimedia user interfaces. Three visionary keynote addresses by famous experts: Ramesh Jain, Hermann Maurer, and Masao Sakauchi set the stage for discussion and future directions for the field. The collection of papers that resulted now offers a glimpse of the excitement and enthusiasm from DS-8. Database Semantics: Semantic Issues in Multimedia Systems is suitable as a secondary text for a graduate-level course on database systems, multimedia systems, or information retrieval systems and as a reference for practitioners and researchers in industry.

Foundations of Semantic Databases Bert de Brock, 1995 Providing a comprehensive theory of data modelling, this book explains the important concepts

and principles with real life examples showing how to apply it directly in practical applications Topics covered include a wide variety of functional requirements and query specification capabilities a formal treatment of the semantics of the data static and dynamic constraints and business rules operations on tables databases and database universes data dictionaries and their semantics and comparisons of incidental properties and structural properties throughout the book The book is aimed at professional database users such as designers administrators and programmers as well as specialists involved in data processing

Database Applications Semantics L. Mark, 2016-01-09 The number of new applications in need of database support is exploding and there is an increasing need to link and access database systems supporting these new applications via computer networks End users and non computer experts are becoming heavily involved in the set up management and use of database systems and this book provides the important database design methodologies and implementation technology which should be available for them as well as for computer experts

Integrating Relational Databases with the Semantic Web J.F. Sequeda, 2016-07-28

An early vision in Computer Science was to create intelligent systems capable of reasoning on large amounts of data Independent results in the areas of Semantic Web and Relational Databases have advanced us towards this vision Despite independent advances the interface between Relational Databases and Semantic Web is poorly understood This dissertation revisits this early vision with respect to current technology and addresses the following question How and to what extent can Relational Databases be integrated with the Semantic Web The thesis is that much of the existing Relational Database infrastructure can be reused to support the Semantic Web Two problems are studied Can a Relational Database be automatically virtualized as a Semantic Web data source The first contribution is an automatic direct mapping from a Relational Database schema and data to RDF and OWL The second contribution is a method capable of evaluating SPARQL queries against the Relational Database by exploiting two existing relational query optimizations These contributions are embodied in the Ultrawrap system Experiments show that SPARQL query execution performance on Ultrawrap is comparable to that of SQL queries written directly for the relational data Such results have not been previously achieved Can a Relational Database be mapped to existing Semantic Web ontologies and act as a reasoner A third contribution is a method for Relational Databases to support inheritance and transitivity by compiling the ontology as mappings implementing the mappings as views using SQL recursion and optimizing by materializing views Ultrawrap is extended with this contribution Empirical analysis reveals that Relational Databases are able to effectively act as reasoners

Directions in Databases David S. Bowers, 1994-06-29 This volume constitutes the proceedings of the 12th British National Conference on Databases BNCOD 12 held at Surrey Guildford in July 1994 The BNCOD conferences are thought as a platform for exchange between theoreticians and practitioners where researchers from academia and industry meet professionals interested in advanced database applications The 13 refereed papers presented in the proceedings were selected from 47 submissions they are organized in chapters on temporal databases formal approaches parallel databases object oriented databases and distributed databases In addition there are two invited presentations Managing open systems now that the Glashouse has gone by R Baker and Knowledge reuse through networks of large KBs by P M D Gray

Dan Suciu, Dan Olteanu, Christopher Re, Christoph Koch, 2022-05-31 Probabilistic databases are databases where the value of some attributes or the presence of some records are uncertain and known only with some probability Applications in many areas such as information extraction RFID and scientific data management data cleaning data integration and financial risk assessment produce large volumes of uncertain data which are best modeled and processed by a probabilistic database This book presents the state of the art in representation formalisms and query processing techniques for probabilistic data It starts by discussing the basic principles for representing large probabilistic databases by decomposing them into tuple independent tables block independent disjoint tables or U databases Then it discusses two classes of techniques for query evaluation on probabilistic databases In extensional query evaluation the entire probabilistic inference can be pushed into the database engine and therefore processed as effectively as the evaluation of standard SQL queries The relational queries that can be evaluated this way are called safe queries In intensional query evaluation the probabilistic inference is performed over a propositional formula called lineage expression every relational query can be evaluated this way but the data complexity dramatically depends on the query being evaluated and can be P hard The book also discusses some advanced topics in probabilistic data management such as top k query processing sequential probabilistic databases indexing and materialized views and Monte Carlo databases Table of Contents Overview Data and Query Model The Query Evaluation Problem Extensional Query Evaluation Intensional Query Evaluation Advanced Techniques *Encyclopedia of Database Technologies and Applications*

Semantics of a Networked World. Semantics for Grid Databases Mokrane Bouzeghoub, Carole Goble, Vipul Kashyap, Stefano Spaccapietra, 2004-10-14 The explosion in data exchange fostered by the success of the Web has restated semantics as a kernel issue in the development of services providing data and formation to users and applications worldwide This newly designated conference series on Semantics for the Networked World uni es into a single framework the previous series on Database Semantics and Visual Database Systems that the IFIP WG 2.6 has been offering since 1985 Whereas the intent of the conference series is to explore interesting research issues related to semantics the theme for the 2004 edition is Semantics for Grid Databases Grid computing a new eld concentrating on exible secure coordinated resource sharing among dynamic collections of individuals institutions and resources also referred to as virtual organizations has gathered momentum in the context of providing shared infrastructures for large scale scientific computations and data analysis Similarly P2P computing has attracted substantial attention Currently attention is devoted to the provision of middleware services to make computational resources interoperable at the technical level and to increase the efficiency of use of physical resources However as Grid and P2P computing infrastructures are being increasingly adopted they are likely to have typical problems of information overload that manifest themselves in any large scale infrastructure for information and application sharing e.g. the WWW The need for resource discovery application and service interoperability integration and composition manifest themselves in these infrastructures The ability to interoperate at the semantic level will largely determine the continued success and utilization of these infrastructures

Paton, M. Howard Williams, 2012-12-06 This book is the proceedings of a workshop held at Heriot Watt University in Edinburgh in August 1993 The central theme of the workshop was rules in database systems and the papers presented covered a range of different aspects of database rule systems These aspects are reflected in the sessions of the workshop which are the same as the sections in this proceedings Active Databases Architectures Incorporating Temporal Rules Rules and Transactions Analysis and Debugging of Active Rules Integrating Graphs Objects with Deduction Integrating Deductive and Active Rules Integrity Constraints Deductive Databases The incorporation of rules into database systems is an important area of research as it is a major component in the integration of behavioural information with the structural data with which commercial databases have traditionally been associated This integration of the behavioural aspects of an application with the data to which it applies in database systems leads to more straightforward application development and more efficient processing of data Many novel applications seem to need database systems in which structural and behavioural information are fully integrated Rules are only one means of expressing behavioural information but it is clear that different types of rule can be used to capture directly different properties of an application which are cumbersome to support using conventional database architectures In recent years there has been a surge of research activity focusing upon active database systems and this volume opens with a collection of papers devoted specifically to this topic
