Asthma Sebastian L. Johnston, Stephen T. Holgate, 2008-04-15

Asthma is one of the most important diseases affecting our society. It is an extremely common condition that reduces quality of life and acute exacerbations can be life threatening. It affects a disproportionate number of children. With the overwhelming volume of research being carried out in this field, specialists need a method of keeping up to date with current opinion. As with the other Challenges books, Challenges in Asthma is aimed at hospital specialists and therefore assumes a certain level of knowledge about the disease. It builds on this by discussing only areas of controversy and uncertainty in both the basic understanding of asthma and its management. An international author list will provide stimulating debate with and ultimately draw some conclusions from existing data which will benefit readers in their day to day practice. **Routledge**

Collaborating for Health Paul Thomas, 2017-12-04 Health care is increasingly under pressure. Budget crises are making collaboration and smart thinking essential while increasing numbers of people with multiple long term conditions make specialist models of health care increasingly inefficient. Patients too often go from one specialist to another, duplicating effort and paying too little attention to the bigger picture of their health. Collaborating for Health outlines a solution: community oriented, integrated care and health promotion. Designed to prevent the problems of fragmented care, this approach focuses on building teams, networks and communities for health and care at local level where it is easier to see the range of factors that affect people's health. With the emphasis on partnership working between primary care, public health and others, it allows clusters of general practices to share the work of integrating efforts for care and

health improvement and for non medical organisations to lead parallel initiatives for health and care Introducing both horizontal and vertical integration Thomas presents ways to develop community oriented integrated care in a sustainable way and how to practise the skills in small ways before you have to perform on a big stage This guide is for anyone interested in how multidisciplinary primary care teams can orchestrate most aspects of health and care at local level with timely specialist input
