Handbook of Neuropsychological Assessment Antonio E. Puente, Robert J. McCaffrey, 2013-11-11 The growth of clinical neuropsychology has been unprecedented This growth has been oriented more toward the provision of than toward the foundation for services Thus while a greater number of psychologists are performing a greater number of neuropsychological procedures there seems to us an uneven parallel growth between these services and the empirical foundations for them It should come to no one's surprise that increasingly aggressive attacks on the field have been leveled Despite these attacks clinical neuropsychology continues to enjoy exceptional growth within psychology and acceptance by other health practitioners insurance companies legislators judges juries and above all consumers of our services Growth without self reflection is a dangerous enterprise as is growth without directions We find it disconcerting that existing and limited self analysis has assumed that neuropsychological dysfunction is immune to the same variables that

affect psychological dysfunction Some attention has been paid to the most obvious ones such as age but all others have been ignored and or misunderstood This neglect has spawned a body of knowledge replete with questionable data and unfounded conclusions Hence it is surprising that clinical neuropsychologists consider themselves to be more scientifically sound than their regular clinical counterparts

Advances in Child Neuropsychology Michael G. Tramontana, Stephen R. Hooper, 2013-03-07 The field of child neuropsychology is still young It has no obvious birth date Hence we cannot determine its age with the type of chronometric precision for which our scientific hearts may yearn Nevertheless one landmark to which we might point in this connection is that the first systematic textbook to appear in this area i e Rourke Bakker Fisk Strang 1983 is not yet 10 years old Be that as it may activity in the field has been growing steadily if not by leaps and bounds Although there is nowhere near the intensity of investigation of children from a neuro psychological standpoint as there is of adults there have been notable systematic investigations of considerable interest Some of the more important of these are presented in the current volume Intended to provide authoritative reviews of important substantive areas of child neuropsychology this series begins with a volume that contains just that reviews of areas as diverse as auditory evoked responses in newborns and the behavioral effects of head trauma in children Methodological issues also deemed important by the Editors are discussed in most of the chapters contained herein Furthermore the exemplary lines of programmatic research or application in the field that are deemed to fall within the purview of this series are also represented in this volume
