The Neurosciences: Paths of Discovery, I F. WORDEN, J. SWAZEY, G. ADELMAN, 2012-12-06 To commemorate properly the 70th birthday of a man who by his very nature is too busy to pause for any kind of ceremonial event unless it has a concomitant functional output was a difficult problem for the Staff and Associates of the Neurosciences Research Program Frank F O S has always dreaded the prospect that sometime it might be appropriate for his colleagues to present him a Fest schrift In fact Fest me no Schriften became his battle cry expressing his feeling that the idea of testimonials clustered into a book was anathema So the breakthrough idea for the planners was to organize a symposium around the theme of discovery in neuroscience that would be valuable scientifically and in its demonstration of interdisciplinary interaction would support that emphasis in Frank s career After much planning a program was developed beginning with a birthday party the evening before followed by the two day symposium and closing with the first F O Schmitt Lecture in Neuroscience We hope that publication of the scientific proceedings in this volume will be of interest not only to the neuroscience community but also to a broad general readership interested in discovery understanding and the creative processes in scientific work An organizing committee chaired by Fred Worden collected advice and guidance leading to the selection of speakers whose scientific careers have played an important part in the recent history of modern neuroscience *The Neurosciences* Gardner C. A New Field in Mind Frank W. Stahnisch, 2020-03-12 In recent decades developments in research technologies and therapeutic advances have generated immense public recognition for neuroscience However its origins as a field often linked to partnerships and projects at various brain focused research centres in the United States during the 1960s can be traced much further back in time In *A New Field in Mind* Frank Stahnisch documents and analyzes the antecedents of the modern neurosciences as an interdisciplinary field Although postwar American research centres such as Francis O Schmitt's Neuroscience Research Program at MIT brought the modern field to prominence Stahnisch reveals the pioneering collaborations in the early brain sciences at centres in Germany Austria and Switzerland in the first half of the

twentieth century One of these Heinrich Obersteiner's institute in Vienna began its work in the 1880s Through case studies and collective biographies Stahnisch investigates the evolving relationships between disciplines anatomy neurology psychiatry physiology serology and neurosurgery which created new epistemological and social contexts for brain research He also shows how changing political conditions in Central Europe affected the development of the neurosciences ultimately leading to the expulsion of many physicians and researchers under the Nazi regime and their migration to North America An in depth and innovative study A New Field in Mind tracks the emergence and evolution of neuroscientific research from the late nineteenth century to the postwar period

Enhanced Learning and Teaching via Neuroscience Lorna Uden, Gregory Siy Ching, Amy Corrinne Roberts, 2023-11-15 Neuroscience contributes to the basic understanding of the neural mechanisms underlying human development and learning Educational neuroscience is an interdisciplinary research field that seeks to translate research findings on neural mechanisms of learning to educational practice and policy and to understand the effects of education on the brain It is an emerging multidisciplinary field where the aim is to link basic research in neuroscience psychology and cognitive science with educational technology Educational neuroscience is often associated with the science of learning and encompasses a broad range of scientific disciplines from basic neuroscience to cognitive psychology to computer science to social theory It is an interdisciplinary research field that seeks to translate research findings on neural mechanisms of learning to educational practice and policy and to understand the effects of education on the brain Neuroscience research usually focuses only on learning but there is a developing subfield within neuroscience called Mind Brain and Education MBE that attempts to link research with teaching MBE researchers consider how to take advantage of the natural human attention span how to use studies about memory systems to inform lesson planning and how to use research on the role of emotions in learning In neuroscience research progress has been extraordinary including advances in both understanding and technology Scientists from a wide range of disciplines are being attracted to the challenge of understanding the brain In spite of discoveries regarding the structure of the brain we still do not understand how the nervous system allows us to see hear learn remember and plan certain actions Educators and schools around the globe are increasingly relying on the knowledge techniques and programs developed based on a new understanding of how our brains work This knowledge is being applied to the classroom A growing amount of attention is being paid to neuroscience and how the results of empirical research may be used to help individuals learn more effectively In this Research Topic academic scientists researchers and scholars will share their experiences and research results on all aspects of brain based learning and educational neuroscience Furthermore it provides a premier interdisciplinary platform for researchers practitioners and educators to present the latest developments trends and concerns In addition it discusses practical challenges encountered and solutions adopted in the field of Educational Neuroscience The focus of this Research Topic is to bring together academic scientists researchers and scholars to exchange and share their experiences and research findings related to brain based

learning and educational neuroscience Researchers practitioners and educators will also be able to present and discuss the newest innovations trends and concerns This will include practical challenges encountered and solutions adopted in Educational Neuroscience as well as in related fields All original and unpublished papers describing conceptual constructive empirical experimental or theoretical work in any area of Brain Based Learning and Educational Neuroscience or studies that explore the intersections between neuroscience psychology and education are highly encouraged Aspects topics and critical issues of interest include but are not limited to neuroscience applications in enhanced learning how students learn mathematics and language personal motivation social and emotional learning motivation the biology of learning brain functions and information processing and many others Research Training and Career Development Programs Supported by the National Institutes of Health National Institutes of Health (U.S.),1991
