On Concepts And Measures:

Social Science Concepts and Measurement Gary Goertz, 2020-09-29 A fully revised edition of the classic reference on concepts and their role in social science research Social Science Concepts and Measurement offers an updated look at the theory and methodology of concepts for the social sciences Emphasizing that most concepts are multilevel and multidimensional this revised edition continues to bring the qualitative and quantitative closer together with new chapters devoted to scaling aggregation and the methodological links between the semantics of concepts and numeric measures In addition it stresses that concepts are used for description and causal inference and contain normative judgments Initial chapters focus on conceptualization followed by chapters on issues of measurement The textbook examines concepts in the international arena such as the global performance indicators used by international organizations like the UN and the World Bank as well as classic paired concepts such as poverty and wealth democracy and authoritarianism and war and peace Additionally it explores such topics as typologies hybrid concepts and how complex concepts constitute complex theories The volume serves as a guide to the methodology of concepts in the classroom and is accompanied by more than two hundred exercises Social Science Concepts and Measurement is an indispensable resource for graduate students and scholars

Stress and Strain in Epitaxy: Theoretical Concepts, Measurements and Applications J.-P. Deville, M. Hanbücken, 2001-07-03 This book contains keynote lectures which have been delivered at the 3rd Porquerolles School on Surface Science SIR2000 Surfaces Interfaces Relaxation The aim of this school was to review the main concepts necessary to understand the role of interfacial stress strain and relaxation in crystal growth by heteroepitaxy By bringing together scientists from various fields physics chemistry materials science and engineering which daily use complementary methodological approaches experiment theory modelization the school allowed to offer 11 multidisciplinary courses This book addresses the state of art of stress in epitaxial materials it describes the various methods to measure the atomic displacement and stress fields it reviews the spectroscopic methods necessary to map the interface chemistry it details the theoretical methods and concepts which are needed to predict them and it questions the fact that stress and relaxation can induce specific properties in magnetism catalysis electron transport and so on The field of stress and strain in heteroepitaxy has known large developments during the last ten years New techniques have been used to set up new devices in which functionalities are obtained through structuration at a nanometer scale Large scale integration and reduced dimensions are the key factors to optimize the achievements of these devices Already used in industry quantum wells magnetic sensors these devices are obtained by molecular beam epitaxy sputtering or pulsed laser deposition Their reduced dimensionality increased the number of surfaces and interfaces the role of which has to be precised Experimentalists try now to associate materials having very different crystal structure and chemical composition The elastic stress stored in the device can induce various phenomena which have to be evaluated understood and predicted The book intends also to show that many questions are still

Measurement in Health Behavior Colleen Konicki DiIorio, 2005-11-04 Measurement in Health Behavior offers faculty students researchers and public health professionals the information they need to improve their knowledge of instrument development and testing and their understanding of reliability and validity testing discussed in articles and reports The book also helps improve students and professionals ability to conduct basic tests for reliability and validity and hones their skills in interpreting the results of data analysis Based on data collected from the author's more than ten years of research and program development Measurement in Health Behavior provides realistic examples from the public health arena to clearly demonstrate the book's concepts Journal of Educational Psychology, 1911 Meaning, measurement, and correlates of moral development Daniel Brugman, Monika Keller, Bryan Sokoll, 2017-10-02 Morality has once again become an important focus of research in different scientific disciplines from biology neuroscience and evolutionary psychology to social psychology economics and political philosophy One of the reasons for this renewed interest stems from the tragedies that human beings individually or in groups inflict upon the lives of one another and the world at large tragedies such as war the extinction of species and ecological destruction climate change and last but not least the financial crisis Moral destitution

and collapse a lack of respect for human dignity and worth and deficits in proper moral functioning at all levels of the world community often discounted or masked by transparent excuses and vacuous rationalizations are all viewed as principal causes of the social societal and ecological crises with which we are confronted today The key to solving these crises must lie at least partly in a better understanding and active deployment of morality Developmental psychology is charged with the specific task of illuminating the growth and evolution of moral functioning in human beings This book was originally published as a special issue of the European Journal of Developmental Psychology

Negotiating Universalism in India and Latin America Andres Mejia-Acosta, Louise Tillin, 2021-06-15 This book explores how vertical inter governmental political and fiscal bargains and horizontal variation in political social and economic conditions across regions contribute to or undermine the provision of inclusive and sustainable social policies at the subnational level in Latin America and India The question of how to advance universal social rights while reducing territorial inequalities has been a central dilemma for Latin America and India After several decades of ambitious decentralization reforms in both regions the balance between local accountability versus centralized planning remains a theoretical and empirical problem in need of systematic exploration The chapters in this volume incorporate both federal and decentralized unitary states pointing to common political tensions across unitary and federal settings despite the typically greater institutionalization of regional autonomy in federal countries The contributors examine the territorial dimension of universalism and explore in greater and empirical detail the causal links between fiscal transfers social policies and outcomes and highlight the political dynamics that shape fiscal decentralization reforms and the welfare state The chapters in this book were originally published as a special issue of Regional Federal Studies
