Congress. Senate. Finance,1974 Profit Mark Stoll,2022-11-08

Profit getting more out of something than you put into it is the original genius of homo sapiens who learned how to unleash the energy stored in wood exploit the land and refashion ecosystems As civilization developed we found more and more ways of extracting surplus value from the earth often deploying brutally effective methods to discipline people to do the work needed Historian Mark Stoll explains how capitalism supercharged this process and traces its many environmental consequences The financial innovations of medieval Italy created trade networks that with the European discovery of the Americas made possible vast profits and sweeping cultural changes to the detriment of millions of slaves and indigenous Americans the industrial age united the world in trade and led to an energy revolution that changed lives everywhere But when efficient production left society awash in goods a new sort of capitalism predicated on endless individual consumption took its place This story of incredible ingenuity and villainy begins in the Doge s palace in medieval Venice and ends with Jeff Bezos aboard his own spacecraft Mark Stoll s revolutionary account places environmental factors at the heart of capitalism s progress and reveals the long shadow of its terrible consequences **Gasoline price changes the dynamic of supply, demand, and competition.** ,2005 **Poverty of Power** Barry Commoner,2015-02-18 In the last ten years the United States the most powerful and technically advanced society in human history has been confronted by a series of ominous seemingly intractable crises First there was the threat to the environmental survival then there was the apparent shortage of energy and now there is the unexpected decline of the economy These are usually regarded as separate afflictions each to be solved in its own terms environmental degradation by pollution controls the energy crisis by finding new sources of energy and new ways of conserving it the economic crisis by manipulating prices taxes and interest rates But each effort to solve one crisis seems to clash with the solution of the others pollution control reduces energy supplies energy conservation jobs Inevitably proponents of one solution become opponents of the others Policy stagnates and remedial action is paralyzed adding to the confusion and gloom that beset the country So opens Barry Commoner s *The Poverty of Power* the book in which America s great biologist and environmentalist addresses himself to the central question of our day He concludes that

what confronts us is not a series of separate crises but a single basic deficit a fault that lies deep in the design of modern society This book is an effort to unearth that fault to trace its relation to the separate crises and to consider what can be done to correct it at its root **Safety or Profit?** Theo Nichols, David Walters, 2016-12-05 As the title Safety or Profit suggests health and safety at work needs to be understood in the context of the wider political economy This book brings together contributions informed by this view from internationally recognized scholars It reviews the governance of health and safety at work with special reference to Australia Canada Sweden and the United Kingdom Three main aspects are discussed The restructuring of the labor market this is considered with respect to precarious work and to gender issues and their implications for the health and safety of workers The neoliberal agenda this is examined with respect to the diminished power of organized labor decriminalization and new governance theory including an examination of how well the health and safety at work regimes put in place in many industrial societies about forty years ago have fared and how distinctive the recent emphasis on self regulation in several countries really is The role of evidence there is a dearth of evidence based policy The book examines how policy on health and safety at work is formulated at both company and state levels Cases considered include the scant regard paid to evidence by an official inquiry into future strategy in Canada the lack of evidence based policy and the reluctance to observe the precautionary principle with respect to work related cancer in the United Kingdom and the failure to learn from past mistakes in the Deepwater Horizon disaster in the Gulf of Mexico

Administration's Fiscal Year 1983 Economic Program United States. Congress. House. Committee on Ways and Means, 1982
