Mathematical Logic for Computer Science Mordechai Ben-Ari, 2012-12-06 Mathematical Logic for Computer Science is a mathematics textbook with theorems and proofs but the choice of topics has been guided by the needs of computer science students The method of semantic tableaux provides an elegant way to teach logic that is both theoretically sound and yet sufficiently elementary for undergraduates To provide a balanced treatment of logic tableaux are related to deductive proof systems The logical systems presented are Propositional calculus including binary decision diagrams Predicate calculus Resolution Hoare logic Z Temporal logic Answers to exercises for instructors only as well as Prolog source code for algorithms may be found via the Springer London web site <http://www.springer.com> 978 1 85233 319 5 Mordechai Ben Ari is an associate professor in the Department of Science Teaching of the Weizmann Institute of Science He is the author of numerous textbooks on concurrency programming languages and logic and has developed software tools for teaching concurrency In 2004 Ben Ari received the ACM SIGCSE Award for Outstanding Contributions to Computer Science Education

The Logic Programming Paradigm Krzysztof R. Apt, Victor W. Marek, Mirek Truszczynski, David S. Warren, 2012-12-06 Logic Programming was founded 25 years ago This exciting new text reveals both the evolution of this programming paradigm since its inception and the impressively broad scope of current research in Logic Programming The contributions to the book deal with both theoretical and practical issues They address such diverse topics as computational molecular biology machine learning mobile computing multi agent systems planning numerical computing and dynamical systems database systems an alternative to the formulas as types approach program semantics and analysis and natural language processing The contributors are all leading world experts in Logic Programming and their contributions were all invited and refereed

High Integrity Software Victor L. Winter, Sourav Bhattacharya, 2012-12-06 The second half of the twentieth century has witnessed remarkable advances in technology The unquestioned leader in this race has been computer technology Even the most modest personal computers today have computing power that would have astounded the leading technologists a few decades earlier and what's more similar advances are predicted for many years to come Looking towards the future it has been conservatively estimated that in 2047 computers could easily be 100 000 times more powerful than they were in 1997 Moore's law Moore would lead to an increase on the order of around 10 billion Bell Because of its enormous capability computer technology is becoming pervasive across the technology spectrum Nowadays it is not surprising to discover that very common household gadgets like your toaster contain computer technology Televisions microwave ovens and even electric shavers contain software And what's more the use of computer technology has been estimated to double every two

years Gibbs In order to keep up with the growing technology demands and to fully utilize the ever more powerful computing platforms software projects have become more and more ambitious This has lead to software systems becoming dominant forces in system functionality Further more the ambition to realize significant portions of a system s function ality through software has extended into the high consequence realm Presently software controls many critical functions in 1 airplanes 2 electronic commerce 3 space bound systems 4 medical systems and 5 various transportation systems such as automobiles and trains

Programming Languages and Systems S. Doaitse Swierstra,2003-07-31 This is the second time that of ESOP has formed part of the ETAPS cluster of conferences workshops working group meetings and other associated activities One of the results of colocatingso many conferences is a reduction in the number of possibilities to submit a paper to a European conference and the increased competition between conferences that occurs when boundaries between indiv ual conferences have not yet become well established This may have been the reason for the fact that only 44 submission were received this year On the other hand we feel that the average quality of submissions has gone up and thus the program committee was able to select 18 good papers only one less than the

year before The program committee did not meet physically and all discussion was done using a Web driven data base system Despite some mixed feelings there is an overall tendency to appreciate the extra time available for giving papers a second look and really going into comments made by other program committee members I want to thank my fellow program committee members for the work they have put into the refereeing process and the valuable feedback they have given to authors I want to thank the referees for their work and many detailed comments and finally I want to thank everyone who has submitted a paper without authors no conference
