Integrating Machine Learning Into HPC-Based Simulations and Analytics Ben Youssef, Belgacem, Ben Ismail, Mohamed Maher, 2024-12-13 Researchers are increasingly using machine learning ML models to analyze data and simulate complex systems and phenomena Small scale computing systems used for training validation and testing of these ML models are no longer sufficient for grand challenge problems characterized by large volumes of data generated at a much higher rate than before surpassing by far the computing capabilities currently available in many cyberinfrastructure platforms By associating high performance computing HPC with ML environments

scientists and engineers would be able to enhance not only the scalability but also the performance of their predictive ML models The Handbook of Research on Integrating Machine Learning Into HPC Based Simulations and Analytics presents recent research efforts in designing and using ML techniques on HPC systems and discusses some of the results achieved thus far by cutting edge relevant contributions Covering topics such as data analytics deep learning and networking this major reference work is ideal for computer scientists academicians engineers researchers scholars practitioners librarians instructors and students

Perception of Energy Experts on the Adoption of Energy Efficient Technology Ir. Dr. THIRUMALAICHELVAM SUBRAMANIAM, 2019-04-22 Barriers to commercial and industrial energy efficiency improvements in Klang Valley Malaysia are more pronounced due to the existence of factors such as weak policy and regulatory frameworks economic and financial constraints lack of information and other issues This research utilized a qualitative research methodology using a phenomenology approach aimed at enhancing the knowledge of commercial and industrial energy efficiency in Klang Valley Malaysia by investigating the barriers associated with the implementation of energy efficiency measure The eleven main themes and twenty eight sub themes identified from the study revealed that energy is poorly managed in the various commercial and industrial sectors and that there is an energy efficiency gap resulting from the low implementation of energy efficiency measures In addition the study revealed that the most important factors impeding the implementation of cost effective energy efficiency technologies in the organizations are principally economic and financial barriers such as lack of budget funding and access to capital The study also revealed that these economic and financial barriers are linked to the lack of adequate government framework for commercial and industrial energy efficiency The study also showed that market factors related to cost reductions resulting from lowered energy use and threats of rising energy prices are the most important drivers for adapting energy efficiency technologies To motivate energy efficiency there should be established standards guidelines roadmaps regulations and enforcement of regulation suitable for the local environment which at present has not been executed completely in Malaysia
