Biofilms in Medicine, Industry and Environmental Biotechnology Piet Lens,V. O'Flaherty,A. P. Moran,P. Stoodley,T. Mahony,2003-04-30 Biofilms are of great practical importance for beneficial technologies such as water and wastewater treatment and bioremediation of groundwater and soil In other settings biofilms cause severe problems for example in 65% of bacterial infections currently treated by clinicians particularly those associated with prosthetics and implants accelerated corrosion in industrial systems oil souring and biofouling Until recently the structure and function of biofilms could only be inferred from gross measures of biomass and metabolic activity This limitation meant that investigators involved in biofilm research and application had only a crude understanding of the microbial ecology physical structure and chemical characteristics of biofilms Consequently opportunities for the exploitation and control of biofilms were very limited The past decade has witnessed the development of several new techniques to elucidate the structure and function of biofilms Examples include the use of molecular probes that identify different microbes in complex communities as well as their metabolic functions the use of microsensors that show concentration gradients of key nutrients and chemicals the use of confocal laser scanning microscopy to describe the physical structure of biofilms and the development of a new generation of mathematical models that allow for the prediction of biofilm structure and function However much progress remains to be made in efforts to understand control and exploit biofilms This timely book will introduce its readers to the structure and function of biofilms at a fundamental level as determined during the past decade of research including Extracellular polymers as the biofilm matrix Biofilm phenotype differential gene expression interspecies signalling Biofilm ecology Biofilm monitoring Resistance of biofilms to antimicrobial agents and Biofilm abatement Biofilms in Medicine Industry and Environmental Technology offers a holistic and multi disciplinary description of the topic including biofilm formation and composition but also biofilm monitoring disinfection and control All these aspects are presented from three points of views medical industrial and environmental biotechnological in a compact easy to read format Metabolic Engineering Jens Nielsen,2003-07-03 Metabolic engineering is a rapidly evolving field that is being applied for the optimization of many different industrial processes In this issue of Advances in Biochemical Engineering Biotechnology developments in different areas of metabolic engineering are reviewed The contributions discuss the application of metabolic engineering in the improvement of yield and productivity illustrated by amino acid production and the production of novel compounds in the production of polyketides and extension of the substrate range and in the engineering of *S cerevisiae* for xylose metabolism and the improvement of a complex biotransformation process **Directory of Microbicides for the Protection of**
