Neuropsychiatric Features of Medical Disorders James W. Jefferson, 2012-12-06 When Critical Issues in Psychiatry was conceived there were several subjects I considered to be of crucial importance in a series devoted to residents and clinicians in psychiatry as well as to other mental health professionals Of prominence was the pressing need for an in depth and scholarly examination of the interface between medicine and psychiatry I had been amazed to find that not a single book to my mind adequately addressed the psychological symptoms and manifestations of both common and rare medical illness It seemed to me that there was a need for a work which would achieve the following goals First it would assist in the differential diagnosis of functional psychiatric symptoms versus symptoms secondary to recognized or unrecognized medical illness second it would elucidate the psychological symptoms resulting from pharmacologic and other therapeutic interventions in medical illness and third it would examine the use of psychopharmacological agents in the presence of medical illness and the drugs used to treat that illness Dr Jefferson is Board Certified in both internal medicine and psychiatry and both Drs Jefferson and Marshall have extensive clinical experience from their many years of consultation liaison work in psychiatry Their experience and expertise have resulted in what I believe to be a monumental contribution to the literature
